

with the increasing epidemic of obesity and obesity-related diseases in this country. The therapeutic drugs class of Diuretics (Bumetanide, Furosemide, Hydrochlorothiazide, Spironolactone) were discussed as off-patent drugs that require further information in children. It was determined that we need further discussion with the pediatric experts involved in the development of the "Fourth Report" to determine if, and how, this particular class of drugs is used in primary pediatric hypertension and how a clinical study might be structured to address the complex issues that have recently arisen, such as obesity-related hypertension, in the diagnosis and treatment of this disease.

Parasitic Diseases was identified as a therapeutic area of interest due to the tremendous impact on morbidity and mortality that these diseases have in children worldwide. Albendazole and Mebendazole were discussed as off-patent drugs that require further information in children. It was determined that we need to consult with domestic (Centers for Disease Control and Prevention) and foreign sources (World Health Organization) and other areas where these agents are predominantly monitored and used to obtain safety information. It was also determined that a liquid formulation of Albendazole would be advantageous for children of developing countries, in whom these diseases occur more often.

Influenza was identified as a therapeutic area of interest because of the emerging threat of pandemic flu and the lack of dosing and efficacy data in our most vulnerable pediatric population—children less than 1 year of age. Amantidine and Rimantidine were discussed as off-patent drugs that require further information in children. It was determined that we need more information on the effectiveness of these drugs to provide additional insight into the use of these agents in the population of children less than 1 year of age.

Cancer has been identified as an ongoing therapeutic area of interest because of the extensive morbidity and mortality that this disease continues to exhibit in pediatric patients of all ages.

Poisoning was identified as a therapeutic area of interest due to the fact that injuries and poisonings remain as one of the top 5 conditions that lead to the highest morbidity and mortality in young children and adolescents.

Sickle Cell Anemia was identified as a therapeutic area of interest because of the extensive morbidity caused by, and paucity of treatment options for, this disease.

The following are the conditions and drugs discussed in our November 8–9,

2005, scientific meeting with experts in pediatric research. We will add these conditions and drugs to the 2006 priority list for which pediatric studies are most urgently needed, along with their indications for use:

Treatment of Pediatric Cancers: Methotrexate and Daunomycin

There is an urgent need for information regarding the pharmacokinetics and toxicity of daunomycin in obese children. There is an urgent need to evaluate the neurotoxicity and long-term cognitive outcomes of children receiving methotrexate.

Treatment of Sickle Cell Anemia: Hydroxyurea

There is an urgent need for further pharmacokinetic and long-term safety data in the use of this drug in children with sickle cell anemia.

Treatment of Organophosphate Poisoning: Pralidoxime

There is an urgent need for further dosing information of the use of this drug in children.

For the coming year, NICHD is planning a series of discussions with experts in the field of pediatric cancers (NCI/COG), pediatric infectious diseases, emergency care in pediatrics (PECARN), pediatric-based research networks (PBRN), pediatric hypertension, and pediatric psychiatry, in addition to our ongoing discussions with the other NIH Institutes and Centers. The goal of these discussions will be to specifically identify current gaps in scientific knowledge regarding research and treatment of these various pediatric conditions, with the ultimate goal of determining future approved drugs for which pediatric studies are needed. NICHD will continue scientific discussions and planning throughout 2006 and will provide an update in January 2007.
