

management practices is not being pursued because we are presently unable to fund such a program. An alternative by which interested private or non-Federal property owners would prepare an individual permit application/Agreement with us also was evaluated. Under that alternative, we would process each permit application/Agreement individually. This would increase the effort, cost, and amount of time it would take to provide safe harbor assurances to participating landowners and also cause such benefits to be applied on a piecemeal, individual basis. We have determined the previously identified alternatives, which would result in delays and lack of a coordinated effort, would likely result in a continued decline of the RCWs on private lands due to habitat fragmentation, lack of beneficial habitat management, and the effects of demographic isolation.

A no-action alternative was also explored, but this alternative is not likely to increase the number of RCW groups or RCW habitat, nor would it alleviate landowner conflicts. Instead, the action proposed here, although it authorizes future incidental take, is expected to attract sufficient interest among North Carolina landowners to generate substantial net conservation benefits to the RCW on a landscape level. The proposed SHA was developed in an adaptive management framework to allow changes in the program based on new scientific information, including but not limited to biological needs and management actions proven to benefit the species or its habitat.
