#### NRC IMPORT LICENSE APPLICATION

Name of applicant, date of application, date received, Application No., Docket No.	Description of material		End use	Country of origin
	Material type	Total quantity		
Duratek Services, Inc., April 10, 2006, April 13, 2006, IW017, 11005621.	Class A radioactive waste in the form of radioactively contaminated materials including metals, dry activity material (such as wood, paper, and plastic) and liquids (such as aqueous and organic based fluids).	Up to 6,000 tons of materials contaminated with various radionuclides in varying combinations. Total quantity or activity level of each range from a total of .07 TBq uranium (other than U-233, U-235 or U-238) to a total of 37 TBq Iron-55 (Fe-55), with a combined total activity level for all radionuclides not to exceed 108 TBq.	For recycle and beneficial reuse to the greatest possible extent, which may or may not require decontamination. Some materials to be incinerated and/or used in Duratek operations.	Canada.

Dated this 22nd day of May 2006 at Rockville, Maryland.

BILLING CODE 7590-01-M

**NUCLEAR REGULATORY COMMISSION****[Docket No. PROJ0734, PROJ0735, PROJ0736, POOM-32]****Notice of Availability of Draft Standard Review Plan for Activities Related to U.S. Department of Energy Waste Determinations, NUREG-1854****AGENCY:** U.S. Nuclear Regulatory Commission.**ACTION:** Notice of availability of draft Standard Review Plan for public comment.

**SUMMARY:** The U.S. Nuclear Regulatory Commission (NRC) is issuing a draft Standard Review Plan (SRP) for activities related to U.S. Department of Energy (DOE) waste determinations, for public comment. The draft SRP provides guidance to the NRC staff in evaluating non-high-level waste determinations developed by DOE for the Savannah River Site, Idaho National Laboratory, the Hanford site, and the West Valley Demonstration Project for certain wastes that are a result of the reprocessing of spent nuclear fuel. The draft SRP provides elements the NRC staff should review to determine whether there is reasonable assurance that the appropriate criteria can be met for determining that waste is incidental to reprocessing and can be managed as low-level waste. The draft SRP also provides information about the role of the NRC in the waste determination process and the NRC monitoring activities under the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (NDAA). The draft SRP does not set forth regulatory requirements for NRC or for DOE, and

compliance with the draft SRP is not required.

**DATES:** The public comment period on the draft SRP begins with publication of this notice and continues for 60 days. Written comments should be submitted as described in the **ADDRESSES** section of this notice. Comments submitted by mail should be postmarked by that date to ensure consideration. Comments received or postmarked after that date will be considered to the extent practical.

**ADDRESSES:** Members of the public are invited and encouraged to submit comments to the Chief, Rules and Directives Branch, Mail Stop T6-D59, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001. Please note Docket Nos. PROJ0734, PROJ0735, PROJ0736, and POOM-32 when submitting comments. Comments will also be accepted by e-mail at [NRCREP@nrc.gov](mailto:NRCREP@nrc.gov) or by fax to (301) 415-5397, Attention: Anna Bradford.

**SUPPLEMENTARY INFORMATION:****I. Background**

In October 2004, the NDAA was enacted. Section 3116 of the NDAA gave the NRC new responsibilities with respect to DOE waste management activities for certain “incidental” waste resulting from the reprocessing of spent nuclear fuel within the States of South Carolina and Idaho. These responsibilities include consultation with DOE on the determination of whether waste is high-level waste (HLW), as well as monitoring of DOE's disposal actions for these wastes. The concept behind incidental waste is that some material, resulting from the reprocessing of spent nuclear fuel, does not need to be disposed of as HLW in a geologic repository because the residual radioactive contamination, if properly isolated from the environment, is sufficiently low that it does not represent a hazard to public health and safety. Consequently, incidental waste is not considered to be HLW, but instead is low-level waste. DOE uses technical analyses that are documented in a waste determination to evaluate whether waste is incidental or HLW. A waste determination provides DOE's analysis
