Section 90.621 requires a fixed mileage separation of 113 km (70 miles) between co-channel 800 and 900 MHz systems. However, section 90.621(b)(4) provides that co-channel stations may be separated by less than 113 km (70 miles) by meeting certain transmitter ERP and antenna height criteria, as listed in the Commission's Short-Spacing Table. Previously, engineering showings were submitted with applications demonstrating that a certain addition or modification would not cause interference to other licensees, even though the stations would be less distance apart. Section 90.621(b)(5) states that the separation between co-channel systems may be less than the separations table if an applicant submits with its application letters of concurrence indicating that the applicant and each co-channel licensee

within the specified separation agree to accept any interference resulting from the reduced separation between their systems. Each letter from a co-channel licensee must certify that the system of the concurring licensee is constructed and fully operational. The applicant must also submit with its application a certificate of service indicating that all concurring co-channel licensees have been served with an actual copy of the application.

Federal Communications Commission.

Secretary.

I. General Information

A. Background

1. The Federal Communications Commission (Commission) established rules and policies to facilitate the digital transition for low power television (LPTV), television (TV) translator and Class A TV stations. In its *LPTV DTV Report and Order*, 69 FR 69325, November 29, 2004, the Commission gave existing LPTV and TV translator service permittees and licensees the flexibility to choose one (and only one) of two methods to convert their existing analog stations to digital. Existing permittees and licensees in these services may either implement an on-channel digital conversion of their analog channel or they may seek a (second) digital companion channel that may be operated simultaneously with their analog channel. Permittees and licensees in these services are not guaranteed a digital companion channel and must identify a channel that can be operated consistent with the Commission's interference protection rules. At a date to be determined in the future, the Commission will require that the permittee or licensee terminate analog operation, return one of their two channels to the Commission, and operate their station only in digital mode. Permittees and licensees in these services may choose only one of these two methods for converting their existing analog stations to digital.

B. Eligibility and Filing Restrictions

2. This is a national filing window, meaning that applications for digital companion channels may be filed for any location in the United States and its
