

Treaty, decisions of the Commission, and other U.S. law. In total, NMFS has tentatively identified two no-action alternatives, three action alternatives related to controls on the type and amount of fishing (Table 1), and three alternatives related to the allocation and use of fishing privileges. NMFS plans to analyze the environmental consequences of implementing each of the alternatives by assessing the direct, indirect, and cumulative effects of each to the human environment in the Western and Central Pacific Ocean.

By evaluating alternatives that span the full range of reasonably foreseeable future management measures, the environmental impacts of future management actions not explicitly analyzed could be estimated relative to those calculated in this EIS.

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for extension of a current information collection.

The National Marine Fisheries Service (NMFS) requires any U.S. citizen issued a Special Coral Reef Ecosystem Fishing Permit to complete logbooks and submit them to NMFS (50 CFR 665). The Special Coral Reef Ecosystem Fishing Permit is authorized under the Fishery Ecosystem Plans for American Samoa Archipelago, Hawaiian Archipelago, Mariana Archipelago, and Pacific Remote Island Areas. The information in the logbooks is used to obtain fish catch/fishing effort data on coral reef fishes and invertebrates harvested in designated low-use marine protected areas and on those listed in the regulations as potentially-harvested coral reef taxa in waters of the U.S. exclusive economic zone in the western Pacific region. These data are needed to determine the condition of the stocks, whether the current management measures are having the intended effects, and to evaluate the benefits and costs of changes in management measures. The logbook information includes interactions with protected species, including sea turtles, monk seals, and other marine mammals, which are used to monitor and respond to incidental takes of endangered and threatened marine species.

II. Method of Collection

Reports are submitted to NMFS in the form of paper logbook sheets and paper transshipment forms within 30 days of each landing of coral reef harvest. No electronic forms or web-based reporting is currently available. Notifications are submitted via telephone.

III. Data

OMB Control Number: 0648–0462.

Form Number(s): None.

Type of Review: Regular submission (extension of a currently approved information collection).

Affected Public: Business or other for-profit organizations; individuals or households.

Estimated Number of Respondents: 5.

Estimated Time Per Response: Pre-trip and pre-landing notifications, 3 minutes; logbook reports, 30 minutes; transshipment reports, 15 minutes.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for extension of a current information collection.

The National Marine Fisheries Service (NMFS) requires, as codified under 50 CFR part 665, any person (1) fishing for, taking, retaining, or using a vessel to fish for Western Pacific coral reef ecosystem management unit species in the designated low-use Marine Protected Areas, (2) fishing for any of these species using gear not specifically allowed in the regulations, or (3) fishing for, taking, or retaining any Potentially Harvested Coral Reef Taxa in the coral reef ecosystem regulatory area, to obtain and carry a permit. A receiving vessel owner must also have a transshipment permit for at-sea transshipment of coral reef ecosystem management unit species. The permit application form provides basic information about the permit applicant, vessel, fishing gear and method, target species, projected fishing effort, *etc.*, for use by NMFS and the Western Pacific Fishery Management Council in determining eligibility for permit issuance. The information is important for understanding the nature of the fishery and provides a link to participants. It also aids in the enforcement of Fishery Ecosystem Plan measures.
