

rank waters that cannot meet water quality standards (WQS) following the implementation of technology-based controls. Under Section 303(d), States are also required to establish total maximum daily loads (TMDLs) for listed waters not meeting standards because of pollutant discharges. In developing the Section 303(d) lists, States are required to consider various sources of water quality related data and information, including the Section 305(b) State water quality reports. Section 106(e) requires that states annually update monitoring data and use it in their Section 305(b) report. Section 314(a) requires states to report on the condition of their publicly owned lakes within the Section 305(b) report.

Pursuant to the Clean Water Act and its implementing regulations, EPA's WRAPD works with its Regional counterparts to review and approve or disapprove State Section 303(d) lists and TMDLs from 56 respondents (the 50 States, the District of Columbia, and the five Territories). Section 303(d) specifically requires States to develop lists and TMDLs, and EPA is to review and approve or disapprove the lists and the TMDLs. EPA also collects State 305(b) reports from 59 respondents (the 50 States, the District of Columbia, five Territories, and 3 River Basin Commissions).

Tribes are not required to submit Section 305(b) reports. However, to meet the needs of Tribes at all levels of development, EPA has prepared guidance that presents the basic steps a Tribe should take to collect the water quality information it needs to make effective decisions about its program, its goals and its future directions. Tribal water quality monitoring and reporting activities are covered under the Section 106 Tribal Grants Program and are not included in the burden estimates for this ICR. In addition, ICR number 2553.02 "Treatment of Indian Tribes in a Similar Manner as States for Purposes of Section 303(d) of the Clean Water Act (Final Rule)" addresses the Tribes' CWA Section 303(d) Impaired Water Listing and TMDL TAS application and 303(d) Program implementation burden, as well as EPA's burden for reviewing the Tribes' applications and 303(d) Program submittals.

During the period covered by this ICR renewal, respondents will: Complete their 2020 Section 305(b) reports and 2020 Section 303(d) lists; complete their 2022 Section 305(b) reports and 2022 Section 303(d) lists; transmit annual electronic updates of ambient monitoring data via the Water Quality Exchange; and continue to develop

TMDLs according to their established schedules. EPA will prepare biennial updates on assessed and impaired waters for Congress and the public for the 2020 reporting cycle and for the 2022 cycle, and EPA will review 303(d) list and TMDL submissions from respondents.

The burdens of specific activities that States undertake as part of their Section 305(b) and 303(d) programs are derived from a project among EPA, States and other interested stakeholders to develop a tool for estimating the States' resource needs for State water quality management programs. This project has developed the State Water Quality Management Workload Model (SWQMWM), which estimates and sums the workload involved in more than one hundred activities or tasks comprising a State water quality management program. Over twenty States contributed information about their activities that became the basis for the model.

According to the SWQMWM, to meet Section 305(b) and 303(d) reporting requirements the States will conduct: Watershed monitoring and characterization; modeling and analysis; development of Section 303(d) lists and TMDLs for public review; public outreach; formal public participation; tracking; planning; legal support; etc. In general, respondents have conducted each of these reporting and record keeping activities for past Section 305(b) and 303(d) reporting cycles and thus have staff and procedures in place to continue their Section 305(b) and 303(d) reporting programs. The burden associated with these tasks is estimated in this ICR to include the total number of TMDLs that may be submitted during the period covered by this ICR.

Form numbers: None.

Respondents/affected entities: Entities potentially affected by this action are States, Territories and Tribes with Clean Water Act (CWA) responsibilities.

Respondent's obligation to respond: Mandatory: Integrated Water Quality Inventory Reports (Clean Water Act Sections 305(b), 303(d), 314(a), and 106(e)).

Estimated number of respondents: 59 (total).

Frequency of response: Biennial.

Total estimated burden: 3,740,017 (per year) hours. Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$214,524,738 (per year), includes \$0 annualized capital or operation & maintenance costs.

Changes in estimates: There is no change of hours in the total estimated respondent burden compared with the ICR currently approved by OMB,

published on March 1, 2016. EPA has completed phase 1 of the Water Quality Framework, which is a new way of integrating EPA's data and information systems to more effectively support reporting and tracking water quality protection and restoration actions. Phase 1 streamlined water quality assessment and reporting by reducing transactions associated with paper copy reviews and increasing electronic data exchange. The system to support this new electronic reporting was released to support the 2018 reporting cycle in April of 2018. Because this is the first year that the new reporting method is being used, EPA will use this reporting cycle to gather information on reporting burden using this new approach. EPA expects the new approach will result in a reduction in reporting burden, but does not have enough information at this time to quantify the reduction. EPA will use the information collected on reporting burden from the 2018 cycle to revise the ICR burden estimates in the next iteration of this ICR.
