

Overview Document indicates that the program should:

1. Give EPA and the public a better understanding of the types of nanoscale materials produced in the United States. Characteristics of these materials that should be identified include: Physical, chemical, hazard and exposure characteristics; production volume; and the uses of the materials.

2. Help EPA develop a capacity and process for identifying and assessing risks of engineered nanoscale materials.

3. Help EPA determine what information it needs about engineered nanoscale materials and articulate those information needs to industry and other stakeholder groups.

4. Help EPA understand what risk management practices are being employed during production, processing, use and disposal stages, and what additional risk management practices should be considered for implementation.

5. Prompt or reinforce the implementation of risk management practices.

6. Provide the information and experience needed to develop an overall approach to the treatment of nanoscale chemical substances under TSCA that builds public trust in nanoscale materials while enabling innovation and responsible development. The Overview Document indicated that participants in the program should implement basic risk management practices or other environmental or occupational health protection controls (e.g., worker training, hazard communication (including Material Safety Data Sheet (MSDS)), use of available engineering controls, provision of personal protective equipment, product labeling, customer training, waste management practices, etc.). The Overview Document also suggested that, in developing the program, EPA should hold one or more public peer consultation meetings. Among other issues, the meeting(s) would address risk management practices to be included in a basic program and in an in-depth program, each offered under the overall program (Ref. 1).

EPA is holding this public meeting to assist in elaborating possible risk management practices for the stewardship program. The public meeting will involve panel discussions of EPA's discussion paper on possible risk management practices for the basic program, with time allotted for public comment. EPA will place in the public docket and the ERG registration website the discussion paper on possible risk management practices for nanoscale

materials as well as an agenda for the meeting.

III. Issues for EPA and Stakeholders

EPA is requesting comments on the following risk management practices for nanoscale materials:

1. Worker training, including work practices.
2. Hazard communication.
3. Engineering controls.
4. Personal protective equipment.
5. Product labeling.
6. Customer training.
7. Waste management and environmental release management.

Comments in these specific areas will be particularly helpful:

- Risk management practices currently used for nanoscale materials.
- Risk management practices that could potentially be used for nanoscale materials.
- Rationale for the use of these practices and the effectiveness or efficiency of these practices.
- Issues to consider for determining risk management practices for nanoscale materials to include in the basic program.

EPA is also requesting comments on:

1. Other risk management practices for nanoscale materials that should be considered.
2. Consideration for possible additional risk management practices for nanoscale materials in the in-depth program.
