The market reports compiled and disseminated by Market News provide current, unbiased, factual information to all members of the Nation's agricultural industry, from farm to retailer. These market reports assist producers, processors, wholesalers, retailers, and others in making informed production, purchasing, and sales decisions and promote orderly marketing by placing buyers and sellers on a more equal negotiating basis.

Market news reporters communicate with buyers and sellers of egg and poultry commodities on a daily basis in order to accomplish the Program's mission. This communication and information gathering is accomplished through the use of telephone conversations, facsimile transmissions, and electronic mail messages. Market News uses one OMB approved form, PY-90: Monthly Dried Egg Solids Stocks Report, to collect inventory information monthly from commercial dried egg products plants throughout the U.S. Cooperating firms submit this form to Market News primarily via facsimile transmissions.

SUPPLEMENTARY INFORMATION: On May 4, 2006, the City of Ames, Iowa, received allegations that wastes from areas at the National Animal Disease Center (NADC)

with animals challenged with prions were not properly treated prior to discharge to the City wastewater plant. An expert panel was convened to review scientific information about deactivation of prions and assess practices used at NADC to treat liquid wastes from areas where animals with prions are housed and handled that enter the Ames wastewater treatment system. (**Note:** For the purposes of this panel and its review, prions are defined as specific proteins that are abnormally shaped and can cause transmissible diseases associated with the allegations). The panel had its first meeting on August 23, 2006, at the Ames City Hall, followed by preparatory work on August 23, August 24, and September 20. The conference call meeting on October 18, 2006, will continue implementation of the panel's charge to evaluate four main issues related to the handling and disposal of potentially prion-contaminated materials in wastewater from the NADC: (1) Identify scientifically accepted methods for effectively destroying prions; (2) Assess the concerns raised regarding NADC's current and past methods for the destruction of prions; (3) Determine the risk posed to humans and the environment from the current, as well as previous, methods for the destruction of prions utilized at NADC; and (4) If remediation is needed, provide scientifically sound approaches for corrective action(s) that may be taken. Final conclusions of the review will be developed during a meeting at a later date, also to be announced. At the conclusion of its review, the panel will prepare a written report that documents the panel's findings for the four main issues being evaluated. The meeting on October 18 will be held by conference call. The public may monitor the panel's discussion via a speaker phone in the Ames City Hall's Council Chamber.
