**Notice of Voluntarily Cancellation of
Ciba Crop Protection Registrations of
Metalaxyl Technical and End-Use
Products that Contain Metalaxyl**

AGENCY: Environmental Protection
Agency (EPA).

ACTION: Notice.

SUMMARY: EPA is announcing the voluntary cancellation of the registrations of the active ingredient metalaxyl (*N*-(2,6-dimethylphenyl)-*N*-(methoxyacetyl) alanine methyl ester) and the end-use product registrations held by Ciba Crop Protection that contain metalaxyl. The cancellation of these metalaxyl registrations was requested by Ciba Crop Protection, who holds the only EPA registration of Metalaxyl Technical. The cancellation of metalaxyl registrations will allow for the full environmental benefit provided by the recent registration of mefenoxam and end-use products containing mefenoxam. Mefenoxam is the R-enantiomer of metalaxyl and at half the application rate, and provides the same level of efficacy as metalaxyl. Under an agreement reached with the registrant, metalaxyl products can be sold until

December 31, 1998. The registrant has requested that the Agency allow resale and use of the metalaxyl-based end-use products which are in the hands of distributors, dealers and growers by December 31, 1998 until supplies are exhausted.

DATES: Comments associated with this action must be received prior to May 31, 1996. The effective date of the cancellation of the registrations of Metalaxyl Technical and Ciba Crop Protection end-use products containing metalaxyl will be May 31, 1996.

FOR FURTHER INFORMATION CONTACT: By mail: Connie B. Welch, Product Manager 21, Office of Pesticide Programs, Registration Division (7505C), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

Office location for commercial courier delivery and telephone number: Room 227, Crystal Mall No. 2, 1921 Jefferson Davis Highway, Arlington, VA, (703) 305-6226; e-mail:

SUPPLEMENTARY INFORMATION:

I. Introduction

Metalaxyl consists of R and S enantiomeric forms at a ration of 1:1; efficacy studies have shown that the R enantiomer provides the majority of the efficacy provided by metalaxyl. Mefenoxam is the R-enantiomer of metalaxyl and provides the same range and level of efficacy as metalaxyl; however, data provided to EPA demonstrates that this efficacy is achieved with half the amount of active

ingredient applied per acre required with the use of metalaxyl. On March 6, 1996, EPA granted the conditional time limited registration of the active ingredient mefenoxam and 13 end-use products that contain mefenoxam.

Since metalaxyl is one of the most widely registered and used fungicides in the United States with established tolerances in over 120 crop and livestock commodities and has uses as a seed treatment, as a banded or broadcast soil application, and a foliar spray in combination with protectant type fungicides, EPA feels that a significant reduction in the exposure of the environment to pesticides will be gained with the cancellation of metalaxyl and replacement of these uses with products containing mefenoxam. The cancellation and phase out of products containing metalaxyl will assure that the maximum environmental benefit of mefenoxam registration will be achieved.

Ciba Crop Protection has agreed to end sales of metalaxyl based products by December 31, 1998. Since all registered uses of metalaxyl based products are replaced by the registration of parallel and equivalent mefenoxam based products, there will be no loss of uses and no negative impact of minor crops or US agriculture.

II. Intent to Cancel

The following table list the metalaxyl registrations, listed in sequence by registration number, that will be canceled May 31, 1996.
