DEPARTMENT OF TRANSPORTATION

Research and Special Programs Administration

49 CFR Part 195

Petroleum Products and Low-Stress Pipelines

AGENCY: Research and Special Programs Administration, (RSPA), DOT.

ACTION: Interpretation and partial stay of enforcement of regulation.

SUMMARY: This document interprets the definition of "petroleum product" under RSPA's safety regulations for

hazardous liquid¹ pipelines. The definition has been applied to petrochemical products that the regulations were not intended to cover. The interpretation should reduce confusion in deciding which low-stress pipelines² are subject to the regulations.

In addition, this document stays enforcement of the regulations against low-stress pipelines regulated by the U.S. Coast Guard, and against certain short low-stress pipelines that serve plants and transportation terminals. Application of the regulations to these lines would cause undue burdens for industry and government. The stay should ease difficulties in applying the regulations to low-stress pipelines.

EFFECTIVE DATE: May 14, 1996.

FOR FURTHER INFORMATION CONTACT: L. M. Furrow, (202) 366-4559.

SUPPLEMENTARY INFORMATION:

Background

In response to a Congressional directive,³ RSPA extended its hazardous liquid pipeline safety regulations (49 CFR Part 195) to cover certain low-stress pipelines other than rural gathering lines and gravity-powered lines (59 FR 35465; July 12, 1994). That rulemaking action affected low-stress pipelines that transport highly volatile liquids, low-stress pipelines that are located onshore in non-rural areas, and low-stress pipelines that are located offshore or in waterways that are navigable in fact and currently used for commercial navigation (§ 195.1(b)(3)).

Transfer lines comprised the largest proportion of low-stress pipelines brought under Part 195 (about two-thirds of the pipelines and one-third of the mileage). The remainder included trunk lines and non-rural gathering lines. Transfer lines are used to transport hazardous liquid locally between facilities such as transportation terminals, manufacturing plants, petrochemical plants, and oil refineries, or to connect these facilities to associated storage or long-distance pipeline transportation. Because the rulemaking action affected the current operating practices of many companies unfamiliar with Part 195, we allowed operators to delay compliance of

¹ "Hazardous liquid" means petroleum, petroleum products, or anhydrous ammonia. (§ 195.2)

² Low-stress pipeline means a hazardous liquid pipeline that is operated in its entirety at a stress level of 20 percent or less of the specified minimum yield strength of the line pipe. (§ 195.2)

³ The Secretary of Transportation may not provide an exception from regulation for a hazardous liquid pipeline facility only because the facility operates at low internal stress. (49 U.S.C. § 60102(k))
