NUCLEAR REGULATORY COMMISSION

[Docket No. 50-255]

Consumers Power Company; Notice of Consideration of Issuance of Amendment to Facility Operating License, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR-20 issued to Consumers Power Company (the licensee) for operation of the Palisades Plant located in Van Buren County, Michigan.

The proposed amendment would revise the Palisades Technical Specifications (TS) to extend the surveillance interval frequency for the primary coolant pump (PCP) flywheels by one operating cycle. By letter dated January 18, 1996, the licensee previously submitted a request to amend the TS to delete the requirement to perform PCP flywheel inspections. NRC review of the original request will not be completed in time for the upcoming refueling outage scheduled for November 1996; therefore, the licensee has submitted this separate request to extend the surveillance frequency by one operating cycle. The licensee's August 14, 1996, submittal to extend the surveillance frequency stated that the no significant hazards consideration determination presented in its January 18, 1996, submittal remains bounding.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

The following evaluation supports the finding that operation of the facility in accordance with the proposed change to the Technical Specifications would not:

1. Involve a significant increase in the probability or consequences of an accident previously evaluated.

The proposed change to the Technical Specifications would delete the requirement to perform non-destructive examination of the upper flywheel on the PCPs. The fracture mechanics analyses conducted to support the change show that a preexisting crack sized just below detection level will not grow to the flaw size necessary to result in flywheel failure within the life of the plant. This analysis conservatively assumes minimum material properties, maximum flywheel accident speed, location of the flaw in the highest stress area and a number of startup/
