The patent rights in these inventions have been assigned to the United States of America.

The patents and patent applications claim material compositions and synthetic methods for a class of compounds used as cough suppressants, narcotic analgesics, and potential therapeutic treatments of psychoses, epilepsy, phencyclidine intoxication, and as other yet undiscovered clinical applications. The portfolio of inventions relates to the synthesis of medical opiate compounds that are independent of the natural and sole commercial source of these drugs (i.e., the opium poppy). It also includes the synthesis of the racemic compound for which certain isoforms do not produce narcotic side effects.

The prospective exclusive license will be royalty-bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7. The prospective exclusive license may be granted unless, within 60 days from the date of this published Notice, NIH receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR 404.7.

**ADDRESSES:** Requests for a copy of the patent applications, inquiries, comments and other materials relating to the contemplated license should be directed to: Leopold J. Most previous attempts to retard the growth of tumor cells by depleting the intracellular polyamine pool have been directed at inhibiting enzymes in the polyamine biosynthetic pathway; a process that does not completely deplete endogenous stores of these molecules. To date, most attempts at using polyamine biosynthetic inhibitors
