UNITED STATES NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50-269, 50-270, and 50-287]

Oconee Nuclear Station, Units 1, 2, and 3; Notice of Consideration of Issuance of Amendments to Facility Operating Licenses, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of amendments to Facility Operating License Nos. DPR-38, DPR-47, and DPR-55, issued to the Duke Power Company (the licensee), for operation of the Oconee Nuclear Station Units 1, 2, and 3, respectively, located in Seneca, South Carolina.

If approved, the proposed amendments would allow a revision to the Oconee Updated Final Safety Analysis Report to include a one-time emergency power system functional test involving the three Oconee units. The purpose of the test is to verify certain design features of the emergency power system in an integrated fashion. The proposed test procedure involves safety

equipment on all three Oconee units and is beyond the scope of tests described in the licensing basis of the units. The licensee has determined that there is a marginal increase in the possibility of a loss of power when compared with the other emergency power system functional tests that have been previously evaluated and that are performed at Oconee. Therefore, the licensee has determined that the tests may involve an unreviewed safety question, which requires prior NRC approval in accordance with 10 CFR 50.90.

The three Oconee units are presently shut down due to an outage resulting from an unexpected shutdown of Oconee Unit 2 on September 24, 1996. Because of this condition, the NRC requested that the licensee consider performance of tests of the emergency electrical system in a letter dated October 18, 1996. Development and analysis of the test procedures led to the licensee's determination that an unreviewed safety question exists. Since the tests are scheduled to start on January 2, 1997, the amendments must be processed prior to that date. Any delay would delay startup of the Oconee units, which requires that the amendments be processed under exigent circumstances.

Before issuance of the proposed license amendments, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended
