

**FEDERAL COMMUNICATIONS
COMMISSION****47 CFR Parts 2, 73 and 74**

[MM Docket No. 87-268; FCC 97-115]

**Advanced Television Systems and
Their Impact on Existing Television
Service****AGENCY:** Federal Communications
Commission.**ACTION:** Final rule.

SUMMARY: The Commission has adopted a Table of Allotments for digital television (DTV) service, rules for use of these DTV channels, procedures for assigning DTV channels, and plans for spectrum recovery. The Commission also adopted technical criteria for the allotment of additional DTV channels. This action is intended to provide the channels on which broadcasters will operate DTV service and to establish a plan for recovery of spectrum.

EFFECTIVE DATE: June 13, 1997.

FOR FURTHER INFORMATION CONTACT: Bruce Franca (202-418-2470), Alan Stillwell (202-418-2470) or Robert Eckert (202-428-2470), Office of Engineering and Technology.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's *Sixth Report and Order* in MM Docket No. 87-268, FCC 96-317, adopted April 3, 1997, and released April 21, 1997. The full text of this decision is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 230), 1919 M Street, NW., Washington, DC. The complete text of this decision also may be purchased from the Commission's duplicating contractor, International Transcription Service, 2100 M Street, NW., Washington, DC 20036, (202-857-3800).

**Summary of the Sixth Report and
Order**

1. In this action, the Commission adopts a Table of Allotments for digital television (DTV) service, rules for use of these DTV channels, procedures for assigning DTV channels, and plans for spectrum recovery. The new DTV Table accommodates all eligible broadcasters, replicates existing service areas, and ensures sound and efficient spectrum management. The Table will also provide for early recovery of 60 MHz of spectrum (channels 60-69) and recovery of an additional 78 MHz of spectrum at the end of the transition period, for a total recovery of 138 MHz of spectrum. The Commission stated that its overarching goals in this phase of the proceeding are to ensure that the

spectrum is used efficiently and effectively through the reliance on market forces and to ensure that the introduction of digital TV fully serves the public.

2. In developing the DTV allotments, the Commission was guided by several principles. The first of these principles is to fully accommodate all eligible broadcasters with a temporary second channel for DTV service. As provided in the Telecommunications Act of 1996, parties eligible for initial DTV licenses include: "persons that, as of the date of such issuance, are licensed to operate a television broadcast station or hold a permit to construct such a station, or both." See 47 U.S.C. Section 336. The DTV Table of Allotments includes a channel for all such eligible broadcasters. The Commission stated that this approach will promote an orderly transition to DTV by ensuring that all eligible full service broadcasters are able to provide digital service.

3. The second principle is to provide, to the extent possible, all existing broadcasters with a DTV service area that is comparable to their existing NTSC service area (service replication). The DTV Table therefore matches broadcasters existing channels with DTV allotments that will allow them to replicate their existing service areas. Broadcasters will be assigned these matching channels. The Commission stated that this approach will ensure that broadcasters have the ability to reach the audiences they now serve and that viewers have access to the stations that they can now receive over-the-air. In fact, during the transition period, over 50 percent of all broadcasters will receive a DTV channel that provides 100 percent replication, and over 93 percent of all broadcasters will receive a channel that provides at least 95 percent service area replication. Eligible broadcasters are offered DTV channels in accordance with the matched plan of DTV allotments in Table I below.

4. In considering how to provide for service replication, the Commission noted that the power levels that would be authorized for individual DTV stations under the service replication plan originally proposed could lead to increased disparities among stations. The Commission therefore developed the DTV Table based on a minimum power level of 50 kW effective radiated power (ERP) and a maximum power level of 1000 kW ERP. It stated that a 50 kW minimum power level will ensure that stations have a sufficient service area to compete effectively within their markets and is consistent with the maximization concept supported by the industry. It also stated that 1000 kW is

sufficient to provide a very high degree of service replication for almost all stations. The Commission indicated that this power level allows a more equitable distribution of opportunities for maximization of service areas by stations of all sizes.

5. Next, the Commission stated that in considering the spectrum to use for DTV service, it is important to provide the new digital TV stations with the spectrum that is the most appropriate for their operation. The Commission further stated that, given its obligation to manage the spectrum efficiently in the public interest and the increased number of stations that the spectrum can accommodate using DTV technology, it is important that the recovery of spectrum that is not needed for DTV continue to be a key component of the implementation of DTV service. The new DTV Table therefore plans for the eventual location of all DTV channels in a core spectrum of VHF and UHF channels that are technically most suited for DTV operation. This initial DTV Table is based on use of channels 2-51. However, the Commission stated that at the end of the transition it would specify a core DTV spectrum of either channels 2-46 or 7-51.

6. To implement its core spectrum plan, the Commission attempted to provide all broadcasters with a DTV channel within the range of channels 2-51. Because of the limited availability of spectrum and the need to accommodate all existing facilities with minimal interference among stations, however, some broadcasters are provided transition DTV channels outside this area. Broadcasters with DTV channels outside the final core spectrum will move their DTV operations to a channel in the core at the end of the transition. This plan will permit the eventual recovery of 138 MHz of spectrum nationwide.

7. The DTV Table minimizes use of channels 60-69 to facilitate the early recovery of this portion of the spectrum. In taking this action, the Commission concluded that neither its core spectrum plan or the early recovery of these channels will have a significant impact on the flexibility needed for the implementation of DTV. It further noted that the record clearly demonstrates that additional spectrum is required to meet the needs of public safety and other land mobile users. The Commission stated that the record also strongly supports a conclusion that spectrum in the region of channels 60-69 is appropriate to meet some of these needs. In this regard, it stated that it intends to initiate a separate proceeding in the near future to address how to re-

allocate available spectrum at channels 60–69.

8. The Commission adopted a number of other policies, procedures and technical criteria to be used in allotting DTV channels. These proposals include: (1) Specifying the use of existing NTSC transmitter site coordinates as the reference points for the new DTV allotments; (2) deleting all existing vacant NTSC allotments to provide sufficient spectrum for DTV and, where feasible, replacing deleted NTSC vacant noncommercial allotments with new DTV allotments; (3) avoiding the use of channels 3, 4, and 6 to minimize interference to cable terminal devices, VCRs and FM radio service; and, (4) protecting land mobile operations on channels 14–20.

9. While the Commission continued the secondary status of low power TV and TV translator stations, it adopted a number of administrative and technical measures to minimize the impact of

DTV implementation on low power operations. These measures include allowing low power stations that are affected by DTV implementation to apply for a suitable replacement channel in the same area without being subject to competing applications and to operate until a displacing DTV station or a new primary service provider is operational. The Commission also allowed low power station operators and applicants to make use of terrain shielding, Longley-Rice terrain dependent propagation prediction methods and appropriate interference abatement techniques to show that the station will not cause interference to other stations. Finally, the Commission adopted a number of changes to its technical rules for low power TV operation that will provide additional flexibility to accommodate low power operations during and after the transition.

10. The Commission removed the conditions that were applied to applications for modification of existing NTSC stations that were granted subsequent to July 25, 1996, the date of the Notice of Proposed Rule Making, 61 FR 43209 (August 21, 1996), addressing DTV allotments. It indicated that in developing the DTV Table of Allotments it was able to accommodate all of the eligible broadcasters with allotments that do not conflict with any of the authorizations to modify existing NTSC facilities that have been granted subsequent to July 25, 1996. The Commission further stated that it will henceforth consider any impact on DTV allotments in deciding whether to grant applications for modification of NTSC facilities.

Finally, the Commission established technical criteria for the allotment of additional DTV channels and the modification of allotments included in the initial DTV Table.

Procedural Matters**11. Paperwork Reduction Act of 1995**

Analysis. The decision herein has been analyzed with respect to the Paperwork Reduction Act of 1995, Public Law 104-13, and found to propose or impose no modified information collection requirements on the public.

12. Final Regulatory Flexibility

Analysis. As required by the Regulatory Flexibility Act (RFA), an Initial Regulatory Flexibility Analysis (IRFA) was incorporated in the *Sixth Further Notice of Proposed Rule Making (Sixth Further NPRM)* in this proceeding. The

Commission sought public comment on the proposals in the *Sixth Further NPRM*, including comment on the IRFA. This present Final Regulatory Flexibility Analysis (FRFA) conforms to the RFA, as amended.

A. Need for and Objectives of This Sixth Report and Order

In this rule making action, the Commission adopts policies, procedures and technical criteria for use in conjunction with broadcast digital television (DTV), adopts a DTV Table of Allotments, adopts a plan for the

recovery of a portion of the spectrum currently allocated to TV broadcasting, and provides procedures for assigning DTV frequencies. We seek to allot DTV channels in a manner that is most efficient for broadcasters and the public and least disruptive to broadcast television service during the period of transition from NTSC to DTV service. The overarching goals in this phase of the DTV proceeding are to ensure that the spectrum is used efficiently and effectively through reliance on market forces and to ensure that the

introduction of digital TV fully serves the public interest.

B. Summary of Significant Issues Raised by Public Comments in Response to the IRFA

Three comments were received specifically in response to the IRFA contained in the *Sixth Further NPRM*. First, Apogee Broadcasting Corporation (Apogee), which is the owner, operator, and licensee of an LPTV station, states that its station will be forced from the air under the proposed Table of Allotments. Apogee also estimates that over half of the current LPTV stations will be threatened under the proposed Table of Allotments. Apogee argues that such a result will lead to less diversity in programming on LPTV. Apogee endorses the series of technical proposals put forth by the Community Broadcasters Association (CBA), and suggests that the Table of Allotments be redrafted with an eye toward protecting LPTV stations wherever possible, with full power stations being required to negotiate engineering solutions with LPTV stations. Apogee argues that unused spectrum due to DTV implementation should be offered for use first to displaced LPTV stations, and that DTV licensees that displace LPTV stations should pay for the costs associated with frequency changes, pay for the costs of lost business opportunities, and, if necessary, provide spectrum from their DTV allotment for LPTV replacement channels. Apogee supports the proposal that LPTV stations be permitted to seek "primary" channel status ahead of any new entrants. Finally, Apogee argues that the Table of Allotments, as proposed, will lead to costly and time-consuming litigation.

Second, Fireweed Communications Corporation (Fireweed), licensee of a full power station in Anchorage, Alaska, notes that, in the *Sixth Further NPRM* IRFA, we requested comment on "whether the Commission should adopt measures that will assist small stations . . . in their transition, either in their cost to upgrade technical operations or new channel identification." In this regard, Fireweed notes that the IRFA also cited the expected cost of equipment to operate on the new DTV channels as varying "from \$750,000 upwards to \$10 million." Firewood argues that conversion costs to DTV can be kept lower by providing for continued operation on all VHF channels. Fireweed states that its station, and other small-market stations, already possess the most expensive part of a DTV transmission plant—an existing transmitter and antenna. On

behalf of its station, Fireweed proposes that it be permitted to retain its current VHF channel for DTV while initiating a temporary UHF channel for NTSC, later to drop the temporary UHF channel. Fireweed estimates that this approach would accomplish the conversion to DTV for under \$80,000.

Finally, MARRI Broadcasting, Inc. (MARRI), argues generally that we should ensure certainty in the time frame for the implementation of DTV, and that we should tolerate no delays by those unable to meet the time frames for providing service.

We have taken the commenters' views and arguments into account in the *Sixth Report and Order*. As there described, we determined, first, that the primary allotment objective should be to develop a DTV Table of Allotments that provides a channel for all eligible broadcasters, consistent with the provisions of the 1996 Telecommunications Act regarding initial eligibility for DTV licenses. The Commission also noted that low power television and TV translator operations have always been authorized on a secondary basis. For these reasons, we rejected an approach that would have resulted in providing allotments for fewer than all full service licensees in order to avoid the displacement of some LPTV stations. We did, however, take into account the views of the commenters and others in recognizing the public benefits from LPTV stations and in adopting measures to mitigate the impact of DTV implementation on such stations. The mitigating measures adopted by the Commission, including those in response to the views of the commenters, are described *infra* in Section E of this FRFA ("Steps Taken to Minimize Burdens on Small Entities, and Significant Alternatives Considered and Rejected"). We note that, as a result of these actions, the great majority of LPTV operations should be able to continue to operate.

We have limited compensation issues to those of low power services affected by new service providers on channels 60–69, and will address such issues in a forthcoming Notice of Proposed Rule Making on reallocation of those channels. Concerning Fireweed's request for relief specific to its own full power station, we note that such specific request must be handled outside of this rule making, and Fireweed has submitted a separate request for such consideration. And finally, consistent with MARRI's concern, we have stated our intention, through use of the DTV Table of Allotments and other policies described in the *Sixth Report and Order*, to

promote an orderly and efficient transition to DTV.

C. Description and Estimate of the Number of Small Entities to Which the Rules Will Apply

1. Definition of a "Small Business". Under the RFA, small entities may include small organizations, small businesses, and small governmental jurisdictions. 5 U.S.C. 601(6). The RFA, 5 U.S.C. 601(3), generally defines the term "small business" as having the same meaning as the term "small business concern" under the Small Business Act, 15 U.S.C. 632. A small business concern is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration ("SBA"). According to the SBA's regulations, entities engaged in television broadcasting Standard Industrial Classification ("SIC") Code 4833—Television Broadcasting Stations, may have a maximum of \$10.5 million in annual receipts in order to qualify as a small business concern. This standard also applies in determining whether an entity is a small business for purposes of the RFA.

Pursuant to 5 U.S.C. 601(3), the statutory definition of a small business applies "unless an agency after consultation with the Office of Advocacy of the SBA and after opportunity for public comment, establishes one or more definitions of such term which are appropriate to the activities of the agency and publishes such definition(s) in the *Federal Register*." While we tentatively believe that the foregoing definition of "small business" greatly overstates the number of television broadcast stations that are small businesses and is not suitable for purposes of determining the impact of the new rules on small television stations, we did not propose an alternative definition in the IRFA.

Accordingly, for purposes of this *Sixth Report and Order*, we utilize the SBA's definition in determining the number of small businesses to which the rules apply, but we reserve the right to adopt a more suitable definition of "small business" as applied to television broadcast stations and to consider further the issue of the number of small entities that are television broadcasters in the future. Further, in this FRFA, we will identify the different classes of small television stations that may be impacted by the rules and policies adopted in this *Sixth Report and Order*.

2. Issues in Applying the Definition of a "Small Business". As discussed below, we could not precisely apply the

foregoing definition of "small business" in developing our estimates of the number of small entities to which the rules will apply. Our estimates reflect our best judgments based on the data available to us.

An element of the definition of "small business" is that the entity not be dominant in its field of operation. We were unable at this time to define or quantify the criteria that would establish whether a specific television station is dominant in its field of operation. Accordingly, the following estimates of small businesses to which the new rules will apply do not exclude any television station from the definition of a small business on this basis and are therefore overinclusive to that extent. An additional element of the definition of "small business" is that the entity must be independently owned and operated. As discussed further below, we could not fully apply this criterion, and our estimates of small businesses to which the rules may apply may be overinclusive to this extent. The SBA's general size standards are developed taking into account these two statutory criteria. This does not preclude us from taking these factors into account in making our estimates of the numbers of small entities.

With respect to applying the revenue cap, the SBA has defined "annual receipts" specifically in 13 CFR 121.104, and its calculations include an averaging process. We do not currently require submission of financial data from licensees that we could use in applying the SBA's definition of a small business. Thus, for purposes of estimating the number of small entities to which the rules apply, we are limited to considering the revenue data that are publicly available, and the revenue data on which we rely may not correspond completely with the SBA definition of annual receipts.

Under SBA criteria for determining annual receipts, if a concern has acquired an affiliate or been acquired as an affiliate during the applicable averaging period for determining annual receipts, the annual receipts in determining size status include the receipts of both firms. 13 CFR 121.104(d)(1). The SBA defines affiliation in 13 CFR 121.103. In this context, the SBA's definition of affiliate is analogous to our attribution rules. Generally, under the SBA's definition, concerns are affiliates of each other when one concern controls or has the power to control the other, or a third party or parties controls or has the power to control both. 13 CFR 121.103(a)(1). The SBA considers factors such as ownership, management,

previous relationships with or ties to another concern, and contractual relationships in determining whether affiliation exists. 13 CFR 121.103(a)(2). Instead of making an independent determination of whether television stations were affiliated based on SBA's definitions, we relied on the data bases available to us to provide us with that information.

3. Television Station Estimates Based on Census Data. The *Sixth Report and Order* will affect full service television stations, TV translator facilities, and LPTV stations. The Small Business Administration defines a television broadcasting station that has no more than \$10.5 million in annual receipts as a small business. Television broadcasting stations consist of establishments primarily engaged in broadcasting visual programs by television to the public, except cable and other pay television services. Included in this industry are commercial, religious, educational, and other television stations. Also included are establishments primarily engaged in television broadcasting and which produce taped television program materials. Separate establishments primarily engaged in producing taped television program materials are classified under another SIC number.

There were 1,509 television stations operating in the nation in 1992. That number has remained fairly constant as indicated by the approximately 1,551 operating television broadcasting stations in the nation as of February 28, 1997. For 1992 the number of television stations that produced less than \$10.0 million in revenue was 1,155 establishments, or approximately 77 percent of the 1,509 establishments. Thus, the rules will affect approximately 1,551 television stations; approximately 1,194 of those stations are considered small businesses. These estimates may overstate the number of small entities since the revenue figures on which they are based do not include or aggregate revenues from non-television affiliated companies. We recognize that the rules may also impact minority and women owned stations, some of which may be small entities. In 1995, minorities owned and controlled 37 (3.0%) of 1,221 commercial television stations in the United States. According to the U.S. Bureau of the Census, in 1987 women owned and controlled 27 (1.9%) of 1,342 commercial and non-commercial television stations in the United States.

It should also be noted that the foregoing estimates do not distinguish between network-affiliated stations and independent stations. As of April, 1996,

the BIA Publications, Inc. Master Access Television Analyzer Database indicates that about 73 percent of all commercial television stations were affiliated with the ABC, CBS, NBC, Fox, UPN, or WB networks. Moreover, seven percent of those affiliates have secondary affiliations.

There are currently 4,977 TV translator stations and 1,952 LPTV stations which would be affected by the allotment policy and other policies in this proceeding. The Commission does not collect financial information of any broadcast facility and the Department of Commerce does not collect financial information on these broadcast facilities. We will assume for present purposes, however, that most of these broadcast facilities, including LPTV stations, could be classified as small businesses. As indicated earlier, approximately 77 percent of television stations are designated under this analysis as potentially small business. Given this, LPTV and TV translator stations would not likely have revenues that exceed the SBA maximum to be designated as small businesses.

4. Alternative Classification of Small Television Stations. An alternative way to classify small television stations is by the number of employees. The Commission currently applies a standard based on the number of employees in administering its Equal Employment Opportunity ("EEO") rule for broadcasting. Thus, radio or television stations with fewer than five full-time employees are exempted from certain EEO reporting and recordkeeping requirements. We estimate that the total number of commercial television stations with 4 or fewer employees is 132 and that the total number of noncommercial educational television stations with 4 or fewer employees is 136.

5. Other Industry Groups. While we do not believe that the following groups of equipment manufacturers constitute regulated entities for the purpose of this FRFA, we note that these entities were interested in certain technical issues in this proceeding and, accordingly, submitted comments for the record. Because the rule changes and textual discussions in the *Sixth Report and Order* may ultimately have some effect on equipment compliance, we include these entities for the purpose of this FRFA.

Television Equipment Manufacturers: The Commission has not developed a definition of small entities applicable to manufacturers of television equipment. Therefore, we will utilize the SBA definition of manufacturers of Radio and Television Broadcasting and

Communications Equipment. According to the SBA's regulations, a TV equipment manufacturer must have 750 or fewer employees in order to qualify as a small business concern. Census Bureau data indicates that there are 858 U.S. firms that manufacture radio and television broadcasting and communications equipment, and that 778 of these firms have fewer than 750 employees and would be classified as small entities. The Census Bureau category is very broad, and specific figures are not available as to how many of these firms are exclusive manufacturers of television equipment or how many are independently owned and operated. We conclude that there are approximately 778 small manufacturers of radio and television equipment.

Household/Consumer Television Equipment: The Commission has not developed a definition of small entities applicable to manufacturers of television equipment used by consumers, as compared to industrial use by television licensees and related businesses. Therefore, we will utilize the SBA definition applicable to manufacturers of Household Audio and Visual Equipment. According to the SBA's regulations, a household audio and visual equipment manufacturer must have 750 or fewer employees in order to qualify as a small business concern. Census Bureau data indicates that there are 410 U.S. firms that manufacture radio and television broadcasting and communications equipment, and that 386 of these firms have fewer than 500 employees and would be classified as small entities. The remaining 24 firms have 500 or more employees; however, we are unable to determine how many of those have fewer than 750 employees and therefore, also qualify as small entities under the SBA definition. Furthermore, the Census Bureau category is very broad, and specific figures are not available as to how many of these firms are exclusive manufacturers of television equipment for consumers or how many are independently owned and operated. We conclude that there are approximately 386 small manufacturers of television equipment for consumer/household use.

Computer Manufacturers: The Commission has not developed a definition of small entities applicable to computer manufacturers. Therefore, we will utilize the SBA definition. According to SBA regulations, a computer manufacturer must have 1,000 or fewer employees in order to qualify as a small entity. Census Bureau data indicates that there are 716 firms that

manufacture electronic computers and of those, 659 have fewer than 500 employees and qualify as small entities. The remaining 57 firms have 500 or more employees; however, we are unable to determine how many of those have fewer than 1,000 employees and therefore also qualify as small entities under the SBA definition. We conclude that there are approximately 659 small computer manufacturers.

D. Description of Projected Reporting, Recordkeeping and Other Compliance Requirements

The rules adopted will result in no changes to reporting, recordkeeping, or other compliance requirements beyond that already required under current regulation.

E. Steps Taken To Minimize Burdens on Small Entities, and Significant Alternatives Considered and Rejected

The DTV Table of Allotments will affect all of the commercial and noncommercial broadcast television stations eligible for a DTV channel in the transition period and a significant number of the LPTV and TV translator stations. It is expected that the allotments will constitute the population of channels on which broadcasters will operate DTV service in the future. Affected stations will need to modify or obtain new transmission facilities and, to a varying extent, production equipment to operate on the new DTV channels. The actual cost of equipment is expected to vary in accordance with the degree to which the station becomes involved in DTV programming and origination.

As noted *supra* in Section B of this FRFA ("Summary of Significant Issues Raised by Public Comments In Response to the IRFA"), we have determined that the primary allotment objective should be to develop an Allotments Table that provides a channel for all eligible broadcasters, consistent with the provisions of the 1996 Telecommunications Act regarding initial eligibility for DTV licenses. As a result, some LPTV and TV translator licensees currently on the subject DTV spectrum will be displaced. One alternative to this approach would have been to permit existing LPTV and TV translator stations to remain on their incumbent channels; this approach was not chosen because it would have resulted in providing allotments for fewer than all full service licensees. In making this determination, the Commission noted that LPTV and TV translator operations have always been authorized on a secondary basis. To mitigate the effect of this determination

on those LPTV stations likely to be displaced, we adopted the following policies.

First, we will permit LPTV and TV translator stations that are displaced by DTV stations to apply for a suitable replacement channel in the same area without being subject to competing applications. In this regard, we also are amending our rules to indicate that such applications will be considered on a first-come, first-served basis without waiting for the Commission to issue a low power application window. Also, we will permit displaced stations to request an increase in power or other facility modifications necessary to avoid an interference conflict or to continue serving the previous coverage area.

Second, we have adopted a number of changes to our technical rules, including many changes requested by the LPTV and TV translator industries, that will provide additional flexibility to accommodate low power operations during and after the transition to DTV. These changes include permitting closer spacing of channels, new criteria for accepting low power station applications for adjacent channel operations within a DTV station's noise-limited service area, and the possibility of waivers for low power stations where interference to the DTV station will not occur or where the DTV station has consented.

Finally, we will permit unused DTV spectrum to be used by both new and displaced LPTV and TV translator stations, and will permit existing LPTV and TV translator stations to continue to operate, as secondary operations, until a displacing DTV station or a new primary service provider is operational and is not receiving interference from the LPTV or TV translator station.

In the *Sixth Report and Order* we have also adopted, as proposed, a "service replication/maximization" approach to identify digital TV allotments that, to the extent possible, will allow all existing broadcasters to provide DTV service to a geographic area that is comparable to their existing NTSC service area. Some entities, primarily those representing primarily the interests of existing UHF stations, disagreed with this approach, arguing that it would perpetuate the existing competitive disparities between UHF and VHF stations. We determined to adopt the approach, however, to ensure that broadcasters have the ability to reach the audiences that they now serve and that viewers have access to the stations that they can now receive over-the-air. Partly as a result of comments received, we adopted a minimum power level in the Table of Allotments, for

DTV facilities on UHF frequencies, of 50 kW, along with a maximum of 1000 kW. This "minimum power" approach, with a maximum of 1000 kW, should accommodate UHF providers, many of whom are small entities, while posing less potential for interference with full power stations.

We have also adopted a spectrum "core approach" in our Table of Allotments. One of our principal concerns in this proceeding has been to provide the new digital TV stations with the spectrum that is the most appropriate and technically suitable for their operation. Also, we believe it is important to recover efficiently those channels temporarily assigned for the transition to DTV. As described in the *Sixth Report and Order*, in the *Sixth Further NPRM* we proposed that channels 7–51 be used for DTV service, that channels 60–69 be recovered almost immediately (to be re-used for public safety purposes), and that, in the longer term, channels 2–6 and 52–59 also be recovered. In response, some commenters argued that, to lessen the impact on LPTV and TV translator stations, the core spectrum should be modified to include channels 2–6, and that no spectrum should be recovered prior to the end of the transition to DTV service. Some commenters also argued that the proposed approaches would impact adversely the interference and service replication goals in the implementation of DTV by full service broadcasters.

We have determined that, given the divergence of comment regarding the suitability of channels 2–6 for DTV, the best approach at this time is to develop the DTV Table of Allotments based on the use of channels 2–51. If the lower VHF channels 2–6 prove acceptable for DTV use, we will consider retaining these channels for DTV and adjusting the core spectrum to encompass channels 2–46 rather than channels 7–51. We also believe that the early recovery of channels 60–69 will not have a significant impact on the flexibility needed for the implementation of DTV, and we will retain this approach. In response to the concerns of commenters, we have noted that the ATSC digital system has been rigorously tested and studied, that significant industry efforts have gone into developing the technical planning criteria to be used in the implementation of DTV, and that the Table of Allotments as adopted is fully consistent with these technical decisions. We also believe that any problems in implementation will be better addressed through technical solutions other than a reliance on

channels 60–69. For example, some technical solutions to unexpected interference could include using directional antennas or cross-polarization of DTV and NTSC signals, or limiting power or antenna height during the transition. We also have found the impact of our core and spectrum recovery approaches on interference and service replication to be insubstantial. Finally, we have noted that the public safety community and other land mobile interests support the core approach and argue that spectrum recovery is needed to meet important communications needs, and that the record clearly demonstrates this need for spectrum.

Finally, another issue addressed in the *Sixth Report and Order* that may affect small entities concerns the disposition of digital channels that remain unused for DTV following the transition period. Some commenters argue that our policy toward these channels should include fostering the broadcast policy goals of increased diversity and new entry, particularly by minorities and women, and one commenter argues that we should not permit existing broadcasters to have the exclusive right to use any such vacant channels. As a result, while we have determined that new entrants may seek and apply for these DTV allotments, we have also determined to permit the unused DTV spectrum to be used by both new and displaced LPTV and TV translator stations, and by non-eligible broadcasters. In addition, we will allow non-eligible broadcasters to convert their existing NTSC operations to DTV service at any time during the transition, provided those operations are within the core spectrum area. Last, we have encouraged incumbent broadcasters to seek partnerships with new entrants in developing new stations in areas where additional unused spectrum may be available, and we will consider waivers of our multiple ownership rules to allow such ventures.

Report to Congress: The Commission shall include a copy of this Final Regulatory Flexibility Analysis, along with this *Sixth Report and Order*, in a report to be sent to Congress pursuant to the Small Business Regulatory Enforcement Fairness Act of 1996, 5 U.S.C. 801(a)(1)(A). A copy of this FRFA (or summary thereof) will also be published in the **Federal Register**.

Ordering Clauses

13. *Ordering Clauses.* In accordance with the actions described herein, *it is ordered that* Part 73 of the Commission's rules are amended as set forth below. *It is further ordered that*

eligible broadcasters are offered the opportunity to apply for digital TV allotments paired with their existing NTSC channels in accordance with the allotment plan and associated technical specifications set forth in Table I above, and the procedures set forth in our *Fifth Report and Order* in this proceeding, FCC 97-116, adopted April 3, 1997. This action is taken pursuant to authority contained in sections 4(i), 7, 301, 302, 303, 307 and 336 of the Communications Act of 1934, as amended, 47 U.S.C. sections 154(i), 157, 301, 302, 303, 307 and 336.

14. *It is further ordered that*, pursuant to the Contract with America Advancement Act of 1996, Public Law No. 104-121, the rule amendments set forth below shall be effective June 13, 1997.

List of Subjects 47 CFR Parts 2, 73 and 74

Television.

Federal Communications Commission.

William F. Caton,
Acting Secretary.

Rule Changes

Parts 2, 73 and 74 of title 47 of the Code of Federal Regulations are amended to read as follows:

PART 2—FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS

1. The authority citation for part 2 is revised to read as follows:

Authority: 47 U.S.C. 154, 302, 303, 307 and 336, unless otherwise noted.

2. Section 2.106 is amended by revising non-government footnote 66 to read as follows:

§ 2.106 Table of Frequency Allocations.

* * * * *

Non-Government (NG) Footnotes

* * * * *

NG66 The frequency band 470–512 MHz is allocated for use in the broadcasting and land mobile radio services. In the land mobile services, it is available for assignment in the domestic public, public safety, industrial, and land transportation radio services at, or in the vicinity of 11 urbanized areas of the United States, as set forth in the following table. Additionally, in the land mobile services, TV channel 16 is available for assignment in the public safety radio services at, or in the vicinity of, Los Angeles. Such use in the land mobile services is subject to the conditions set forth in parts 22 and 90 of this chapter.

PART 73—RADIO BROADCAST SERVICES

3. The authority citation for part 73 is revised to read as follows:

Authority: 47 U.S.C. 154, 303, 334 and 336.

4. A new § 73.622 is added to read as follows:

§ 73.622 Digital television table of allotments.

(a) *General.* The following table of allotments contains the digital television (DTV) channel allotments designated for the listed communities in the United States, its Territories, and possessions. The initial DTV Table of Allotments was established on April 3, 1997, to provide a second channel for DTV service for all eligible analog television broadcasters. Requests for addition of new DTV allotments, or requests to change the channels allotted to a community must be made in a petition for rule making to amend the DTV Table of Allotments. A request to amend the DTV table to change the channel of an allotment in the DTV table will be evaluated for technical acceptability using engineering criteria set forth in § 73.623(c). A request to amend the DTV table to add a new allotment will be evaluated for technical acceptability using the geographic spacing criteria set forth in § 73.623(d). DTV allotments designated with an asterisk are assigned for use by non-commercial educational broadcast stations only. Stations operating on DTV allotments designated with a "c" are required to comply with paragraph (g) of this section.

(1) Petitions requesting the addition of a new allotment must specify a channel in the range of channels 2-51.

(2) Petitions requesting a change in the channel of an initial allotment must specify a channel in the range of channels 2-59.

(b) *DTV Table of Allotments.*

(c) Availability of channels.

Applications may be filed to construct DTV broadcast stations only on the channels designated in the DTV Table of Allotments set forth in paragraph (b) of this section, and only in the communities listed therein.

Applications that fail to comply with this requirement, whether or not accompanied by a petition to amend the DTV Table, will not be accepted for filing. However, applications specifying channels that accord with publicly announced FCC Orders changing the DTV Table of Allotments will be accepted for filing even if such applications are tendered before the effective dates of such channel change.

An application for authority to construct a DTV station on an allotment in the initial DTV table may only be filed by the licensee or permittee of the analog TV station with which that initial allotment is paired, as set forth in Appendix B of the *Sixth Report and Order* in MM Docket 87-268, FCC 97-115, adopted April 3, 1997. Copies of the *Sixth Report and Order* may be inspected during normal business hours at the: Federal Communications Commission, 1919 M St., NW., Dockets Branch (Room 239), Washington, DC 20554. This document is also available through the Internet on the *FCC Home Page* at <http://www.fcc.gov>.

Applications may also be filed to implement an exchange of channel allotments between two or more licensees or permittees of analog TV stations in the same community, provided, however, that the other requirements of this section and of

§ 73.623 are met with respect to each such application.

(d) Reference points and distance computations. (1) The reference coordinates of a DTV allotment included in the initial DTV Table of Allotments are the coordinates of the authorized transmitting antenna site of the analog TV station with which that initial allotment is paired, as set forth in Appendix B of the *Sixth Report and Order* in MM Docket 87-268 (referenced in paragraph (c) of this section). An application for authority to construct or modify DTV facilities may specify an alternate location for the DTV transmitting antenna that is within 5 kilometers of the DTV allotment reference coordinates without consideration of electromagnetic interference to other DTV or analog TV broadcast stations, allotments or applications, provided the application complies with paragraph (f)(2) of this section. Location of a DTV broadcast station's transmitting antenna at a site more than 5 kilometers from the DTV allotment reference coordinates must comply with the provisions of § 73.623(c). In the case where a DTV station has been granted authority to construct more than 5 kilometers from its reference coordinates pursuant to § 73.623(c), and its authorized coverage area extends in any azimuthal direction beyond the DTV coverage area determined for the DTV allotment reference facilities, then the coordinates of such authorized site are to be used in addition to the coordinates of the DTV allotment to determine protection from new DTV allotments pursuant to § 73.623(d) and from subsequent DTV applications filed pursuant to § 73.623(c).

(2) The reference coordinates of a DTV allotment not included in the initial DTV Table of Allotments will be designated in the FCC Order changing the DTV Table of Allotments and must meet the geographic spacing requirements of § 73.623(d). An application for authority to construct or modify such DTV facilities must comply with the provisions of § 73.623(c). In the case where such a DTV station has been granted authority to construct pursuant to § 73.623(c) and its authorized coverage area extends in any azimuthal direction beyond the DTV coverage area determined for the DTV allotment reference facilities, then the coordinates of such authorized site are to be used in addition to the coordinates of the DTV allotment to determine protection from new DTV allotments pursuant to § 73.623(d) and from subsequent DTV applications filed pursuant to § 73.623(c).

(3) The reference coordinates defined in paragraphs (d)(1) and (d)(2) of this section shall be used in considering petitions to amend the DTV Table of Allotments and in determining whether interference occurs between DTV stations and between DTV and analog TV stations.

(4) In cases where there are pending applications for DTV stations in other communities which, if granted, would have to be considered in determining whether proposed or modified stations would meet the required technical criteria or separations, as defined in § 73.623, the coordinates of the transmitter sites proposed in such applications must be used to determine whether those requirements have been met.

(5) To calculate the distance between two reference points, see § 73.208(c). However, distances shall be rounded to the nearest tenth of a kilometer.

(e) DTV Service Areas. The service area of a DTV station is the geographic area within which the predicted F(50,90) field strength of the station's signal, in dB above 1 microvolt per meter (dBu), exceeds the following levels:

	dBu
Channels 2–6	28
Channels 7–13	36
Channels 14–69	41

These are the levels at which reception of DTV service is limited by noise. Evaluation of field strength in determining service areas shall be made using the terrain dependent Longley-Rice point-to-point propagation model. Guidance for evaluating coverage areas using the Longley-Rice methodology is provided in *OET Bulletin No. 69*. Copies of *OET Bulletin No. 69* may be inspected during normal business hours at the: Federal Communications Commission, 1919 M St., NW., Dockets Branch (Room 239), Washington, DC 20554. This document is also available through the Internet on the *FCC Home Page* at <http://www.fcc.gov>.

(f) DTV maximum power and antenna heights. (1) The maximum effective radiated power (ERP) and antenna height above average terrain (HAAT) for an allotment included in the initial DTV Table of Allotments are set forth in Appendix B of the *Sixth Report and Order* in MM Docket 87-268 (referenced in paragraph (c) of this section). These limits also appear on the construction permit and license issued for each DTV station. In each azimuthal direction, the reference ERP value is based on the HAAT of the corresponding analog TV

station and achieving predicted coverage equal to that analog TV station's predicted Grade B contour, as defined in § 73.683.

(2) An application for authority to construct or modify DTV facilities will not be subject to further consideration of electromagnetic interference to other DTV or analog TV broadcast stations, allotments or applications, provided that:

(i) The proposed ERP in each azimuthal direction is equal to or less than the reference ERP in that direction; and

(ii) The proposed HAAT is equal to or less than the reference HAAT; and

(iii) The application complies with the location provisions in paragraph (d)(1) of this section.

(3) DTV licensees and permittees may request an increase in either ERP in some azimuthal direction or HAAT, or both, that exceed the initial technical facilities specified for the allotment in Appendix B the *Sixth Report and Order*, up to the maximum permissible limits on DTV power and antenna height set forth in this section or up to that needed to provide the same geographic coverage area as the largest station within their market. Such requests must be accompanied by a technical showing that the increase complies with the technical criteria in § 73.623(c), and thereby will not result in new interference, or statements agreeing to the change from any co-channel or adjacent channel stations that might be affected by potential new interference. In the case where a DTV station has been granted authority to construct pursuant to § 73.623(c), and its authorized coverage area extends in any azimuthal direction beyond the DTV coverage area determined for the DTV allotment reference facilities, then the authorized DTV facilities are to be used in addition to the assumed facilities of the initial DTV allotment to determine protection from new DTV allotments pursuant to § 73.623(d) and from subsequent DTV applications filed pursuant to § 73.623(c).

(4) A DTV station that operates on a channel 2–6 allotment created subsequent to the initial DTV Table will be allowed a maximum ERP of 10 kW if its antenna HAAT is at or below 305 meters and it is located in Zone I or a maximum ERP of 45 kW if its antenna HAAT is at or below 305 meters and it is located in Zone II or Zone III.

(i) At higher HAAT levels, such DTV stations will be allowed to operate with lower maximum ERP levels in accordance with the following table and formulas:

MAXIMUM ALLOWABLE ERP AND ANTENNA HEIGHT FOR DTV STATIONS IN ZONES II OR III ON CHANNELS 2–6

Antenna HAAT (meters)	ERP (kW)
610	10
580	11
550	12
520	14
490	16
460	19
425	22
395	26
365	31
335	37
305	45

(ii) The allowable maximum ERP for intermediate values of HAAT is determined using linear interpolation based on the units employed in the table. For DTV stations located in Zone I that operate on channels 2–6 with an HAAT that exceeds 305 meters, the allowable maximum ERP expressed in decibels above 1 kW (dBk) is determined using the following formula, with HAAT expressed in meters:

$$ERP_{max}=92.57-33.24*\log_{10}(HAAT)$$

(iii) For DTV stations located in Zone II or III that operate on channels 2–6 with an HAAT that exceeds 610 meters, the allowable maximum ERP expressed in decibels above 1 kW (dBk) is determined using the following formula, with HAAT expressed in meters:

$$ERP_{max}=57.57-17.08*\log_{10}(HAAT)$$

(5) A DTV station that operates on a channel 7–13 allotment created subsequent to the initial DTV Table will be allowed a maximum ERP of 30 kW if its antenna HAAT is at or below 305 meters and it is located in Zone I or a maximum ERP of 160 kW if its antenna HAAT is at or below 305 meters and it is located in Zone II or Zone III.

(i) At higher HAAT levels, such DTV stations will be allowed to operate with lower maximum ERP levels in accordance with the following table and formulas:

MAXIMUM ALLOWABLE ERP AND ANTENNA HEIGHT FOR DTV STATIONS IN ZONES II OR III ON CHANNELS 7–13

Antenna HAAT (meters)	ERP (kW)
610	30
580	34
550	40
520	47

MAXIMUM ALLOWABLE ERP AND ANTENNA HEIGHT FOR DTV STATIONS IN ZONES II OR III ON CHANNELS 7–13

Antenna HAAT (meters)	ERP (kW)
490	54
460	64
425	76
395	92
365	110
335	132
305	160

(ii) The allowable maximum ERP for intermediate values of HAAT is determined using linear interpolation based on the units employed in the table. For DTV stations located in Zone I that operate on channels 7–13 with an HAAT that exceeds 305 meters, the allowable maximum ERP expressed in decibels above 1 kW (dBk) is determined using the following formula, with HAAT expressed in meters:

$$ERP_{max}=97.35-33.24*\log_{10}(HAAT)$$

(iii) For DTV stations located in Zone II or III that operate on channels 7–13 with an HAAT that exceeds 610 meters, the allowable maximum ERP expressed in decibels above 1 kW (dBk) is determined using the following formula, with HAAT expressed in meters:

$$ERP_{max}=62.34-17.08*\log_{10}(HAAT)$$

(6) A DTV station that operates on a channel 14–59 allotment created subsequent to the initial DTV Table will be allowed a maximum ERP of 1000 kW if their antenna HAAT is at or below 365 meters.

(i) At higher HAAT levels, such DTV stations will be allowed to operate with lower maximum ERP levels in accordance with the following table and formulas:

MAXIMUM ALLOWABLE ERP AND ANTENNA HEIGHT FOR DTV STATIONS ON CHANNELS 14–59, ALL ZONES

Antenna HAAT (meters)	ERP (kW)
610	316
580	350
550	400
520	460
490	540
460	630
425	750
395	900
365	1000

(ii) The allowable maximum ERP for intermediate values of HAAT is

determined using linear interpolation based on the units employed in the table. For DTV stations located in Zone I, II or III that operate on channels 14–59 with an HAAT that exceeds 610 meters, the allowable maximum ERP expressed in decibels above 1 kW (dBk) is determined using the following formula, with HAAT expressed in meters:

$$\text{ERP}_{\max} = 72.57 - 17.08 * \log_{10}(\text{HAAT})$$

(g) For DTV stations using a channel allotment designated with a "c" in paragraph (b) of this section, the pilot carrier frequency of the DTV signal must be maintained 5.082138 MHz above the visual carrier frequency of the analog TV broadcast station operating on the lower adjacent channel, located within 88 kilometers of the DTV broadcast station. This frequency difference must be maintained within a tolerance of ± 3 Hz.

(h)(1) The field strength or voltage of emissions on frequencies outside the authorized channel of operation must be attenuated no less than the following amounts below the average transmitted power within the authorized channel. At the channel edge, emissions must be attenuated no less than 46 dB. More than 6 MHz from the channel edge, emissions must be attenuated no less than 71 dB. At any frequency between 0 and 6 MHz from the channel edge, emissions must be attenuated no less than the value determined by the following formula:

$$\text{Attenuation in dB} = 46 + [(\Delta f)^2 / 1.44];$$

Where:

Δf =frequency difference in MHz from the edge of the channel.

(2) This attenuation is based on a measurement bandwidth of 500 kHz. Other measurement bandwidths may be used as long as appropriate correction factors are applied. Emissions include sidebands, spurious emissions and radio frequency harmonics. Attenuation is to be measured at the output terminals of the transmitter (including any filters that may be employed). In the event of interference caused to any service, greater attenuation may be required.

Note to paragraph (h): Greater attenuation may be required for situations where the DTV station and an adjacent channel analog TV station serve the same area and there are expected to be locations within that shared area where the analog TV station's field strength is less than 12 dB above the DTV station's field strength.

5. A new § 73.623 is added to read as follows:

§ 73.623 DTV applications and changes to DTV allotments.

(a) General. This section contains the technical criteria for evaluating applications requesting DTV facilities that do not conform to the provisions of § 73.622 and petitions for rule making to amend the DTV Table of Allotments (§ 73.622(b)). Petitions to amend the DTV Table (other than those also expressly requesting amendment of this section) and applications for new DTV broadcast stations or for changes in authorized DTV stations filed pursuant to this section will not be accepted for filing if they fail to comply with the requirements of this section.

(b) In considering petitions to amend the DTV Table and applications filed pursuant to this section, the Commission will use geographic coordinates defined in § 73.622(d) as reference points in determining allotment separations and evaluating interference potential.

(c) *Minimum technical criteria for modification of DTV allotments included in the initial DTV Table of Allotments and for applications filed pursuant to this section.* No petition to modify a channel allotment included in the initial DTV Table or application for authority to construct or modify a DTV station, filed pursuant to this section, will be accepted unless it shows compliance with the requirements of this paragraph.

(1) Requests filed pursuant to this paragraph must demonstrate compliance with the principal community coverage requirements of § 73.625(a).

(2) Requests filed pursuant to this paragraph must demonstrate that there is no increase in the amount of interference caused to any other DTV broadcast station, DTV allotment, or analog TV broadcast station. For evaluating compliance with this requirement, interference is to be predicted based on the procedure set forth in Appendix B of the *Sixth Report and Order* in MM Docket 87-268, FCC 97-115, adopted April 3, 1997, including service areas determined in accordance with § 73.622(e), consideration of whether F(50,10) undesired signals will exceed the following desired-to-undesired (D/U) signal ratios, assumed use of a directional receiving antenna, and use of the terrain dependent Longley-Rice point-to-point propagation model. Guidance for evaluating interference using the Longley-Rice methodology is provided in *OET Bulletin No. 69*. Copies of the *Sixth Report and Order* and *OET Bulletin No. 69* may be inspected during normal business hours at the: Federal

Communications Commission, 1919 M St., NW., Dockets Branch (Room 239), Washington, DC 20554. These documents are also available through the Internet on the *FCC Home Page* at <http://www.fcc.gov>. The threshold levels at which interference is considered to occur are:

	D/U ratio
Co-channel:	
DTV-into-analog TV	+34
analog TV-into-DTV	*+2
DTV-into-DTV	*+15
First Adjacent Channel:	
Lower DTV-into-analog TV	-17
Upper DTV-into-analog TV	-12
Lower analog TV-into-DTV	-48
Upper analog TV-into-DTV	-49
Lower DTV-into-DTV	-42
Upper DTV-into-DTV	-43
Other Adjacent Channel (Channels 14–69 only) DTV-into-analog TV, where N = analog TV channel and DTV Channel:	
N-2	-24
N+2	-28
N-3	-30
N+3	-34
N-4	-34
N+4	-25
N-7	-35
N+7	-34
N-8	-32
N+8	-43
N+14	-33
N+15	-31

Note to paragraph (c)(2): The values for co-channel interference to DTV service are only valid at locations where the signal-to-noise ratio is 28 dB or greater. At the edge of the noise-limited service area, where the signal-to-noise ratio is 16 dB, these values are 21 dB and 23 dB for interference from analog TV and DTV, respectively. Due to the frequency spacing that exists between Channels 4 and 5, between Channels 6 and 7, and between Channels 13 and 14, the minimum adjacent channel technical criteria specified in the table shall not be applicable to these pairs of channels (see § 73.603(a)).

(d)(1) *Minimum geographic spacing requirements for DTV allotments not included in the initial DTV Table of Allotments.* No petition to add a new channel to the DTV Table of Allotments will be accepted unless it demonstrates compliance with the principle community coverage requirements of § 73.625(a) and meets the following requirements for geographic spacing with regard to all other DTV stations, DTV allotments and analog TV stations:

Channel relationship	Separation requirement
VHF Channels 2–13:	

Channel relationship	Separation requirement	Channel relationship	Separation requirement	
Co-channel, DTV to DTV	Zone I— 244.6 km. Zones II & III—273.6 km.	Co-channel, DTV to DTV	Zone I— 196.3 km Zone II & III—223.7 km.	Note to paragraph (d)(1): Due to the frequency spacing that exists between Channels 4 and 5, between Channels 6 and 7, and between Channels 13 and 14, the minimum geographic spacing requirements specified in the table shall not be applicable to these pairs of channels (see § 73.603(a)).
Co-channel, DTV to analog TV	Zone I— 244.6 km. Zone II & III—273.6 km.	Co-channel, DTV to analog TV	Zone I— 217.3 km. Zone II & III—244.6 km.	(2) Zones are defined in § 73.609. The minimum distance separation between a DTV station in one zone and an analog TV or DTV station in another zone shall be that of the zone requiring the lower separation.
Adjacent Channel DTV to DTV	No allotments permitted between: Zone I—40.2 km and 96.6 km. Zones II & III—48.3 km and 96.6 km.	Adjacent Channel DTV to DTV	No allotments permitted between: All Zones—32.2 km and 88.5 km.	(e) <i>Protection of land mobile operations on channels 14–20.</i> The Commission will not accept petitions to amend the DTV Table of Allotments, applications for new DTV stations, or applications to change the channel or location of authorized DTV stations that would use channels 14–20 where the distance between the DTV reference point as defined in § 73.622(d), would be located less than 250 km from the city center of a co-channel land mobile operation or 176 km from the city center of an adjacent channel land mobile operation. Land mobile operations on these channels in the following markets:
DTV to analog TV	No allotments permitted between: Zone I—11.3 km and 114.3 km. Zone II & III—17.7 km and 146.4 km.	DTV to analog TV	No allotments permitted between: All Zones—9.7 km and 88.5 km. No allotments permitted between: Zone I—24.1 km and 80.5 km Zone II & III 24.1 km and 96.6 km	
UHF Channels:		Taboo Channels, DTV to analog TV only (DTV channels ±2, ±3, ±4, ±7, ±8, and 14 or 15 channels above the analog TV channel).		

City	Channels	Latitude	Longitude
Boston, MA	14, 16	42°21'24"	71°03'25"
Chicago, IL	14, 15	41°52'28"	87°38'22"
Dallas, TX	16	32°47'09"	96°47'37"
Houston, TX	17	29°45'26"	95°21'37"
Los Angeles, CA	14, 16, 20	34°03'15"	118°14'28"
Miami, FL	14	25°46'37"	80°11'32"
New York, NY 1	4, 15	40°45'06"	73°59'39"
Philadelphia, PA	19, 20	39°56'58"	75°09'21"
Pittsburgh, PA	14, 18	40°26'19"	80°00'00"
San Francisco, CA	16, 17	37°46'39"	122°24'40"
Washington, DC	17, 18	38°53'51"	77°00'33"

(f) *Negotiated agreements on interference.* Notwithstanding the minimum technical criteria for DTV allotments specified in paragraph (b) of this section, DTV stations operating on allotments that are included in the initial DTV Table may operate with increased ERP and/or antenna HAAT that would result in additional interference to an analog TV station if that station agrees, in writing, to accept the additional interference. Such agreements must be submitted with the application for authority to construct or modify the DTV station's facilities. The

larger service area resulting from such a change of ERP and/or antenna HAAT will be protected in accordance with the provisions of paragraph (c) of this section. Applications submitted pursuant to the provisions of this paragraph will be granted only if the Commission finds that such action is consistent with the public interest.

PART 74—EXPERIMENTAL RADIO, AUXILIARY, SPECIAL BROADCAST AND OTHER PROGRAM DISTRIBUTION SERVICES

6. The authority citation for part 74 continues to read as follows:

Authority: Secs. 4, 303, 48 Stat. 1066, as amended, 1082, as amended; 47 U.S.C. 154, 303, 336, and 554.

7. Section 74.701 is amended by revising paragraph (b) to read as follows:

§ 74.701 Definitions.

* * * * *

(b) *Primary station.* The analog television broadcast station (TV broadcast) or digital television station (DTV) which provides the programs and signals being retransmitted by a television broadcast translator station.

* * * * *

8. Section 74.702 is amended by revising paragraph (b) to read as follows:

§ 74.702 Channel assignments.

* * * * *

(b) Changes in the TV Table of Allotments or Digital Television Table of Allotments (§§ 73.606(b) and 73.622(a), respectively, of part 73 of this chapter), authorizations to construct new TV broadcast analog or DTV stations or to authorizations to change facilities of existing such stations, may be made without regard to existing or proposed low power TV or TV translator stations. Where such a change results in a low power TV or TV translator station causing actual interference to reception of the TV broadcast analog or DTV station, the licensee or permittee of the low power TV or TV translator station shall eliminate the interference or file an application for a change in channel assignment pursuant to § 73.3572 of this chapter.

* * * * *

9. Section 74.703 is amended by revising paragraphs (a), (b) and (c) to read as follows:

§ 74.703 Interference.

(a) An application for a new low power TV, TV translator, or TV booster station or for a change in the facilities of such an authorized station will not be granted when it is apparent that interference will be caused. Except where there is a written agreement between the affected parties to accept interference, or where it can be shown that interference will not occur due to terrain shielding and/or Longley-Rice terrain dependent propagation methods, the licensee of a new low power TV, TV translator, or TV booster shall protect existing low power TV and TV translator stations from interference within the protected contour defined in § 74.707. Such written agreement shall accompany the application. Guidance on using the Longley-Rice methodology is provided in *OET Bulletin No. 69*. Copies of *OET Bulletin No. 69* may be inspected during normal business hours at the: Federal Communications Commission, 1919 M St., N.W., Dockets Branch (Room 239), Washington, DC 20554. This document is also available through the Internet on the *FCC Home Page* at <http://www.fcc.gov>.

(b) It shall be the responsibility of the licensee of a low power TV, TV

translator, or TV booster station to correct at its expense any condition of interference to the direct reception of the signal of any other TV broadcast analog station and DTV station operating on the same channel as that used by the low power TV, TV translator, or TV booster station or an adjacent channel which occurs as a result of the operation of the low power TV, TV translator, or TV booster station. Interference will be considered to occur whenever reception of a regularly used signal is impaired by the signals radiated by the low power TV, TV translator, or TV booster station, regardless of the quality of the reception or the strength of the signal so used. If the interference cannot be promptly eliminated by the application of suitable techniques, operation of the offending low power TV, TV translator, or TV booster station shall be suspended and shall not be resumed until the interference has been eliminated. If the complainant refuses to permit the low Power TV, TV translator, or TV booster station to apply remedial techniques that demonstrably will eliminate the interference without impairment of the original reception, the licensee of the low power TV, TV translator, or TV booster station is absolved of further responsibility. TV booster stations will be exempt from the provisions of this paragraph to the extent that they may cause limited interference to their primary stations' signal subject to the conditions of paragraph (g) of this section.

(c) It shall be the responsibility of the licensee of a low power TV, TV translator, or TV booster station to correct any condition of interference which results from the radiation of radio frequency energy outside its assigned channel. Upon notice by the FCC to the station licensee or operator that such interference is caused by spurious emissions of the station, operation of the station shall be immediately suspended and not resumed until the interference has been eliminated. However, short test transmissions may be made during the period of suspended operation to check the efficacy of remedial measures.

* * * * *

10. Section 74.705 is amended by revising the section heading and paragraphs (b)(4) and (b)(5) and by adding a new paragraph (e) to read as follows:

§ 74.705 TV broadcast analog station protection.

* * * * *

(b) * * *

(4) A UHF low power TV or TV translator construction permit

application will not be accepted if it specifies a site less than 100 kilometers from the transmitter site of a UHF TV broadcast analog station operating on a channel which is the seventh channel above the requested channel, unless it can demonstrate that the service area of the low power TV or TV translator station as established in § 74.707(a) is not located in an area where the TV broadcast analog station is regularly viewed.

(5) An application for a new UHF low power TV or TV translator construction permit, a change of channel, or a major change in facilities pursuant to § 73.3572 of this chapter proposing a maximum effective radiated power of more than 50 kilowatts will not be accepted if it specifies a site less than 32 kilometers from the transmitter site of a UHF TV broadcast analog station operating on a channel which is the second, third, or fourth channel above or below the requested channel.

* * * * *

(e) In support of a request for waiver of the interference protection rules, an applicant for a low power TV, TV translator or TV booster may make full use of terrain shielding and Longley-Rice terrain dependent propagation prediction methods to demonstrate that the proposed facility would not be likely to cause interference to TV broadcast stations. Guidance on using the Longley-Rice methodology is provided in *OET Bulletin No. 69*. Copies of *OET Bulletin No. 69* may be inspected during normal business hours at the: Federal Communications Commission, 1919 M St., NW., Dockets Branch (Room 239), Washington, DC 20554. This document is also available through the Internet on the *FCC Home Page* at <http://www.fcc.gov>.

11. A new § 74.706 is added to read as follows:

§ 74.706 Digital TV (DTV) station protection.

(a) For purposes of this section, the DTV station protected service area is the geographic-area in which the field strength of the station's signal exceeds the noise-limited service levels specified in § 73.622(e) of this chapter. The extremity of this area (noise-limited perimeter) is calculated from the authorized maximum radiated power (without depression angle correction), the horizontal radiation pattern, and height above average terrain in the pertinent direction, using the signal propagation method specified in § 73.625(b) of this chapter.

(b)(1) An application to construct a new low power TV or TV translator station or change the facilities of an

existing station will not be accepted if it specifies a site which is located within the noise-limited service perimeter of a co-channel DTV station.

(2) Due to the frequency spacing which exists between TV channels 4 and 5, between Channels 6 and 7, and between Channels 13 and 14, adjacent channel protection standards shall not be applicable to these pairs of channels.

(c) The low power TV, TV translator or TV booster station field strength is calculated from the proposed effective radiated power (ERP) and the antenna height above average terrain (HAAT) in pertinent directions.

(1) For co-channel protection, the field strength is calculated using Figure 9a, 10a, or 10c of § 73.699 (F(50,10) charts) of part 73 of this chapter.

(2) For adjacent channel protection, the field strength is calculated using Figure 9, 10, or 10b of § 73.699 (F(50,50) charts) of part 73 of this chapter.

(d) A low power TV, TV translator or TV booster station application will not be accepted if the ratio in dB of its field strength to that of the DTV station fails to meet the following:

(1) –21 dB for co-channel operations at the noise-limited perimeter of the DTV station.

(2) +48 dB for adjacent channel operations at:

(i) The DTV noise-limited perimeter if a low power TV, TV translator or TV booster station is located outside that perimeter.

(ii) At all points within the DTV noise-limited area if a low power TV or TV translator is located within the DTV noise-limited perimeter, as demonstrated by the applicant.

12. Section 74.707 is amended by revising paragraph (b)(3), removing paragraphs (d)(5) and (d)(6),

redesignating paragraph (d)(7) as (d)(5), and adding a new paragraph (e) to read as follows:

§ 74.707 Low power TV and TV translator station protection.

* * * * *

(b) * * *

* * * * *

(3) A UHF low power TV, TV translator, or TV booster construction permit application will not be accepted if it specifies a site within the UHF low power TV, TV translator, or TV booster station's protected contour and proposes operation on a channel that is 15 channels above the channel in use by the low power TV, TV translator, or TV booster station.

* * * * *

(e) In support of a request for waiver of the interference protection rules, an applicant for a low power TV or TV translator station may make full use of terrain shielding and Longley-Rice terrain dependent propagation prediction methods to demonstrate that the proposed facility would not be likely to cause interference to low power TV, TV translator and TV booster stations. Guidance on using the Longley-Rice methodology is provided in *OET Bulletin No. 69*. Copies of *OET Bulletin No. 69* may be inspected during normal business hours at the: Federal Communications Commission, 1919 M St., NW., Dockets Branch (Room 239), Washington, DC 20554. This document is also available through the Internet on the *FCC Home Page* at <http://www.fcc.gov>.

13. Section 74.735 is amended by revising the section heading, paragraphs (a), (b) and (c) introductory text, and removing paragraphs (d), (e) and (f).

§ 74.735 Power limitations.

(a) The maximum peak effective radiated power (ERP) of an analog low power TV, TV translator, or TV booster station shall not exceed:

- (1) 3 kW for VHF channels 2–13; and
- (2) 150 kW for UHF channels 14–69.

(b) The maximum ERP of a digital low power TV, TV translator, or TV booster station (average power) shall not exceed:

- (1) 300 watts for VHF channels 2–13; and

- (2) 15 kW for UHF channels 14–69.

(c) The limits in paragraphs (a) and (b) apply separately to the effective radiated powers that may be obtained by the use of horizontally or vertically polarized transmitting antennas, providing the applicable provisions of §§ 74.705, 74.706, 74.707 and 74.709 are met. For either omnidirectional or directional antennas, where the ERP values of the vertically and horizontally polarized components are not of equal strength, the ERP limits shall apply to the polarization with the larger ERP. Applications proposing the use of directional antenna systems must be accompanied by the following:

* * * * *

14. Section 74.750 is amended by revising paragraph (a) to read as follows:

§ 74.750 Transmission system facilities.

* * * * *

(a) A low power TV, TV translator, or TV booster station shall operate with a transmitter that is either type accepted for licensing under the provisions of this subpart or type notified for use under part 73 of this chapter.

* * * * *

[FR Doc. 97-12168 Filed 5-13-97; 8:45 am]

BILLING CODE 6712-01-P
