purpose of making a change to the
regulatory control period used in
Illinois' current 7.2 pounds per square
inch Reid Vapor Pressure rules for the
Metro-East St. Louis ozone
nonattainment area which includes

received in response to that direct final
rule, no further activity is contemplated
in relation to this proposed rule. If EPA
receives written adverse comments, the
direct final rule will be withdrawn and

SUPPLEMENTARY INFORMATION:

Background

On February 4, 1994, the Pennsylvania Department of Environmental Protection (PA DEP, then known as the Pennsylvania Department of Environmental Resources) submitted a revision to its State Implementation Plan (SIP) for the control of VOC and NO_x emissions from major sources (Pennsylvania Chapters 129.91 through 129.95. This submittal was amended with a revision on May 3, 1994 correcting and clarifying the presumptive NO_x RACT requirements under Chapter 129.93. The submittal was again amended on September 18, 1995 by the withdrawal from EPA consideration of the provisions 129.93(c) (6) and (7) pertaining to best available control technology (BACT) and lowest achievable emission rate (LAER). The Pennsylvania SIP revision consists of regulations that would require sources that emit or have the potential to emit 25 tons or more of VOC or NO_x per year in the Pennsylvania portion of the Philadelphia-Wilmington-Trenton ozone nonattainment area (the Philadelphia area) or 50 tons or more of VOC per year in the remainder of the Commonwealth to comply with reasonably available control technology

requirements by May 31, 1995. Outside the Philadelphia ozone nonattainment area, sources of NO_x that emit or have the potential to emit 100 tons or more per year are required to comply with RACT by no later than May 31, 1995. While the Pennsylvania regulations contain specific provisions requiring major VOC and NO_x sources to implement RACT, the regulations under review do not contain specific emission limitations in the form of a specified overall percentage emission reduction requirement or other numerical emission standards. Instead, the Pennsylvania regulations contain technology-based or operational "presumptive RACT emission limitations" for certain major NO_x sources. For other major NO_x sources and all covered major VOC sources, the submittal contains a "generic" RACT provision. Pennsylvania's generic RACT regulation does not impose specific up-front emission limitations, but instead allows for future case-by-case determinations. This regulation allows PA DEP to make case-by-case RACT determinations that are then submitted to EPA for approval as revisions to the Pennsylvania SIP.

On January 12, 1995 (60 FR 2912), EPA proposed three alternative rulemaking actions pertaining to the Pennsylvania RACT regulation (60 FR 2912). Many comments were received in response to that proposed **Federal Register** notice. EPA is hereby withdrawing that notice of proposed actions and reproposing conditional limited approval of this Pennsylvania SIP revision. Because EPA is withdrawing its January 12, 1995 proposed actions, the comments submitted on the January 12, 1995 notice of proposed rulemaking will not be addressed. Any comments in response to today's notice should be sent to the EPA Region III address located in the **ADDRESSES** section of this notice.

Today's Rulemaking Action

EPA is proposing conditional limited approval of the Pennsylvania VOC and NO_x RACT regulations, Chapter 129.91 through 129.95. EPA is proposing to conditionally approve the SIP revision based upon PA DEP meeting its commitment to submit all the case-by-case RACT proposals, for all of the sources it has identified as being subject to the major source RACT regulations, as source-specific revisions to the SIP no later than twelve months from the effective date of EPA's final conditional limited approval of the Pennsylvania VOC and NO_x RACT regulations. Pennsylvania submitted its commitment
