##### I. Abstract

This is a survey of fish and shellfish processing plants and firms that sell these products wholesale, and it asks for information on the volume and value of products processed. Wholesalers are asked to identify the top species sold. These data are required to carry out provisions of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1801 et. seq.) as amended. Data from this survey are used in economic analyses to estimate the capacity and extent of which U.S. fish processors utilize domestic harvest.

#### SUPPLEMENTARY INFORMATION:

##### I. Abstract

Preseason survey information collected from the groundfish industry helps provide (1) the capacity and extent to which U.S. fishing vessels will annually harvest the optimum yield specified for a fishery; (2) the portion of that optimum yield which will not be harvested by U.S. fishing vessels, and can therefore be made available to foreign vessels; and (3) the capacity and extent to which U.S. fish processors can annually process that portion of the optimum yield that will be harvested by U.S. vessels.

Pacific whiting, the species most often available to foreign and joint venture operations in the past, recently has

become fully "Americanized" (processed by U.S. processors only). However, Americanization of other species is not assured, and therefore the need for the survey continues. In addition, there has been an increased need to determine the intent and capacity of segments of the domestic industry, particularly with respect to resource allocation among user groups. Therefore, the survey continues to be an appropriate and important tool to assist in groundfish management.

##### II. Method of Collection

The survey consists of a written data collection instrument for U.S. fish processors, and U.S. fishers of groundfish off the coasts of Washington, Oregon, and California. The survey form will be returned to NMFS (NWR) by mail, fax, electronic mail, or in person.
