

continuations, three deletions, and three additions to the approved 1990 noise compatibility program; and seven noise mitigation measures, which consist of four continuations, one completion, and two additions to the 1990 noise compatibility program. Phase II of the submitted program contained two new noise abatement measures and two new noise mitigation measures. The FAA completed its review and determined that the procedural and substantive requirements of the Act and Part 150 have been satisfied. The overall program, therefore, was approved by the Administrator, effective March 30, 1998.

Of the overall 21 specific measures requiring federal action, 19 were approved without exception. Two land use measures were partially approved subject to the recommendation related to the introduction of noncompatible residential development is not meeting Part 150 criteria. The approved measures included such items as: the continuation of periodic noise monitoring, provision for monthly reports on late night (11 p.m. to 7 a.m.) runway utilization, variance from noise compatibility program assumptions to the Tower and frequent nighttime users; designation of runways 18R and 18L as the preferred for takeoffs by turbojet and large four-engine prop aircraft between 11 p.m. and 7 a.m. when runway 23 or runway 5 cannot be used for reasons of wind, weather, operational necessity, or required runway length; designation of locations and procedures for engine runups; modification to current operating procedures for turbojet and large four-engine prop aircraft departing runways 36R and 36L to initiate turns at 2.5 and 2.6 DME north of the CLT VOR/DME respectively; continuation of the 1990 noise compatibility program land use planning which recommends amending local land use planning policies to reduce the development of noncompatible land uses within the airport environs; continuation of the 1990 noise compatibility program land use measure to rezone undeveloped property to airport compatible land use and limit the density of residential development permitted within noise contours; dedication of aviation easement as a condition of approval for the development of property located in the airport environs; pursuit of the establishment of an airport overlay district that corresponds to the airport environs; pursuit of an amendment of the state building code to authorize the City of Charlotte and Mecklenburg County to raise the minimum building standards (noise level reduction) for new residential construction in the

airport overlay district; development of the full disclosure of property location within the airport environs for potential buyers; continuation of the public information program that is a part of the approval 1990 noise compatibility program; continuation of the sound insulation program for sensitive public buildings used for instruction (schools) and assembly (churches) within the 65 DNL contour; continuation of the sound insulation program of residential property within the 65 DNL contour; within the 70-75 DNL noise contour, offers of purchase assurance, sound insulation of residences, purchase of aviation easements or acquisition of noncompatibility property; acquisition of mobile homes located within the 70 DNL noise contour; exercise of the option to purchase aviation easement, sound insulate or acquire homes within the 65 DNL noise contours where sound insulation is infeasible or not cost effective; establishment of departure turn for third parallel runway 17; establishment of departure turn for the third parallel runway 35; insulation of eligible dwellings within the 2001 noise compatibility program/noise exposure map 65 DNL noise contour, and acquisition of mobile homes within the 65 DNL noise contour of the 2001 noise compatibility program/noise exposure map. These determinations are set forth in detail in the Record of Approval endorsed by the Administrator on March 30, 1998.00000

The FAA also has completed its review of the revised noise exposure maps and related descriptions submitted by the City of Charlotte. The specific maps under consideration are dated February 27, 1998, in the submission. The FAA has determined that these maps for the Charlotte/Douglas International Airport are in compliance with applicable requirements. This determination is effective April 28, 1998. FAA's determination on an airport operator's noise exposure maps is limited to a finding that the maps were developed in accordance with the procedures contained in Appendix A of FAR Part 150. Such determination does not constitute approval of the data, information or plans.

If questions arise concerning the precise relationship of specific properties to noise exposure contours depicted on a noise exposure map submitted under Section 103 of the Act, it should be noted that the FAA is not involved in any way in determining the relative locations of specific properties with regard to the depicted noise contours, or in interpreting the noise exposure maps to resolve questions

concerning, for example, which properties should be covered by the provisions of Section 107 of the Act. These functions are inseparable from the ultimate land use control and planning responsibilities of local government. These local responsibilities are not changed in any way under Part 150 or through FAA's review of noise exposure maps. Therefore, the responsibility for the detailed overlaying of noise exposure contours onto the map depicting properties on the surface rests exclusively with the airport operator which submitted those maps, or with those public agencies and planning agencies with which consultation is required under Section 103 of the Act. The FAA has relied on the certification by the airport operator, under Section 150.21 of FAR Part 150, that the statutorily required consultation has been accomplished.

Copies of the noise exposure maps and of the FAA's evaluation of the maps, and copies of the record of approval and other evaluation materials and documents which comprised the submittal to the FAA are available for examination at the following locations:
