

Retrospective Study, will examine TIPs published by CSAT as of the time of the study. This study will examine methods of dissemination used by CSAT; the success of those methods in reaching the target audiences; users' perceptions of the value of TIPs; decisions to implement the guidance presented in TIPs; and the successes, correlates, and barriers associated with implementation. The Retrospective

Study uses a one-group posttest-only design to provide the framework for a surveys of respondents from four distinct target audiences of interest to CSAT: (1) Single State Agency Directors; (2) directors of substance abuse treatment facilities listed in the most recent Uniform Facilities Data Set (UFDS) database; (3) clinical directors of treatment facilities listed in the database; and (4) front-line clinicians/

counselors working in facilities listed in the database. Measures will include organization characteristics and outcomes associated with the following variables: awareness, receipt, and reading of TIPs; perceived utility of TIPs; and the impact of TIPs on changing substance abuse treatment practices. The estimated annualized burden for a 1-year data collection period is summarized below.

	Number of respondents	Number of responses per respondent	Average burden per response (hrs.)	Total burden hours
Single State Agency Directors	56	2	.55	62
Facility Directors	1040	1.48	.47	718
Clinical Supervisors	1040	1.40	.44	642
Counselors	1280	1.32	.41	696
