DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Diseases Transmitted Through the Food Supply

AGENCY: Centers for Disease Control and Prevention (CDC), HHS.

ACTION: Notice of annual update of list of infectious and communicable diseases that are transmitted through handling the food supply and the methods by which such diseases are transmitted.

SUMMARY: Section 103(d) of the Americans with Disabilities Act of 1990, Public Law 101-336, requires the Secretary to publish a list of infectious and communicable diseases that are transmitted through handling the food supply and to review and update the list annually. The Centers for Disease Control and Prevention (CDC) published a final list on August 16, 1991 (56 FR 40897) and updates on September 8, 1992 (57 FR 40917); January 13, 1994 (59 FR 1949); August 15, 1996 (61 FR 42426); and September 22, 1997 (62 FR 49518-9). The final list has been reviewed in light of new information and has been revised as set forth below.

EFFECTIVE DATE: September 15, 1998.

FOR FURTHER INFORMATION CONTACT: Dr. Morris E. Potter, National Center for Infectious Diseases, Centers for Disease Control and Prevention (CDC), 1600 Clifton Road, NE., Mailstop A-38, Atlanta, Georgia 30333, telephone (404) 639-2206.

SUPPLEMENTARY INFORMATION: Section 103(d) of the Americans with Disabilities Act of 1990, 42 U.S.C. § 12113(d), requires the Secretary of Health and Human Services to:

1. Review all infectious and communicable diseases which may be transmitted through handling the food supply;

2. Publish a list of infectious and communicable diseases which are transmitted through handling the food supply;

3. Publish the methods by which such diseases are transmitted; and,

4. Widely disseminate such information regarding the list of diseases and their modes of transmissibility to the general public.

Additionally, the list is to be updated annually. Since the last publication of the list on September 22, 1997 (62 FR 49518), new information has been reviewed. Two reports on probable transmission of *Cryptosporidium parvum* by infected food workers form the basis for adding it to the list of infectious and communicable diseases. As is true for two other parasitic foodborne pathogens, *Giardia lamblia* and *Taenia solium*, transmission of *Cryptosporidium parvum* from infected food workers through contamination of food is believed to be uncommon; therefore, *Cryptosporidium parvum* is being added to Part II. In addition, Norwalk and Norwalk-like viruses, previously listed in Part I, are now identified as Caliciviruses.

I. Pathogens Often Transmitted by Food Contaminated by Infected Persons Who Handle Food, and Modes of Transmission of Such Pathogens

The contamination of raw ingredients from infected food-producing animals and cross-contamination during processing are more prevalent causes of foodborne disease than is contamination of foods by persons with infectious or contagious diseases. However, some pathogens are frequently transmitted by food contaminated by infected persons. The presence of any one of the following signs or symptoms in persons who handle food may indicate infection by a pathogen that could be transmitted to others through handling the food supply: diarrhea, vomiting, open skin sores, boils, fever, dark urine, or jaundice. The failure of food-handlers to wash hands (in situations such as after using the toilet, handling raw meat, cleaning spills, or carrying garbage, for example), wear clean gloves, or use clean utensils is responsible for the foodborne transmission of these pathogens. Non-foodborne routes of transmission, such as from one person to another, are also major contributors in the spread of these pathogens. Pathogens that can cause diseases after an infected person handles food are the following:

Caliciviruses (Norwalk and Norwalk-like viruses)
Hepatitis A virus
Salmonella typhi

Shigella species

Staphylococcus aureus

Streptococcus pyogenes

II. Pathogens Occasionally Transmitted by Food Contaminated by Infected Persons Who Handle Food, But Usually Transmitted by Contamination at the Source or in Food Processing or by Non-foodborne Routes

Other pathogens are occasionally transmitted by infected persons who handle food, but usually cause disease when food is intrinsically contaminated or cross-contaminated during processing or preparation. Bacterial pathogens in this category often require a period of temperature abuse to permit their multiplication to an infectious dose before they will cause disease in consumers. Preventing food contact by persons who have an acute diarrheal illness will decrease the risk of transmitting the following pathogens:

Campylobacter jejuni
Cryptosporidium parvum
Entamoeba histolytica
Enterohemorrhagic *Escherichia coli*
Enterotoxigenic *Escherichia coli*
Giardia lamblia
Nontyphoidal *Salmonella*
Rotavirus
Taenia solium
Vibrio cholerae 01
Yersinia enterocolitica
