

management, deer and elk would be managed at levels allowing rare species and their habitats to recover. Provided recovery goals are met, Vail & Vickers would be permitted to conduct commercial hunting of deer and elk. After the adaptive management period, deer and elk populations would be eliminated during a final phaseout period. If for some reason an acceptable adaptive management program cannot be developed, deer and elk populations will be reduced at a pre-determined rate. As under Alternative D, the NPS would implement road management actions to reduce impacts to island streams, and would develop a comprehensive alien plant management plan to address problems caused by alien species. The NPS would develop monitoring programs for rare species, water quality, and riparian recovery. Visitor access to Santa Rosa Island would be increased beyond current levels.

Other Alternatives

Other alternatives subject to the current conservation planning and impact analysis process are the same as identified and described in the FEIS/RMP. In addition to the above, these include: Alternative A, No Action; Alternative B, Minimal Action; Alternative C, Targeted Management Action; and Alternative E, Immediate Removal of Ungulates.
