Department of the Army, Corps of Engineers

Intent To Prepare Integrated Feasibility Report(s)/Environmental Impact Statement(s) (EIS) for Structural and Non-Structural Flood Control and Environmental Restoration, Lower Platte River and Tributaries, Nebraska

AGENCY: U.S. Army Corps of Engineers, DoD.

ACTION: Notice of intent.

SUMMARY: Congress authorized the U.S. Army Corps of Engineers (Corps) by resolution of the Committee on Public Works and Transportation on September 28, 1994 to conduct a reconnaissance study along the Lower Platte River and Tributaries, Nebraska in the interest of flood control, environmental restoration, and other purposes. Based on the information and conclusions reached in the reconnaissance report, sufficient water resource problems and needs of national significance in the study area were found to exist to warrant a Federal interest in further study. It was also found that non-Federal sponsors were interested in participating in a cost-shared feasibility study that would address both structural and non-structural flood control measures, and environmental restoration opportunities.

Non-Federal sponsors include the Nebraska Natural Resources Commission, the Lower Platte South Natural Resources District, the Papio-Missouri River Natural Resources District, and the Lower Platte North Natural Resources District. The Lower Platte River Corridor Alliance is participating in study activities.

Five specific locations are being studied in detail for potential structural flood control measures. They include: Clear Creek Levee and Western Sarpy County Levee areas from U.S. Highway 6 upstream to the Douglas/Sarpy County line; the Union Dike area downstream of Fremont, Nebraska; the Sand Creek tributary near Wahoo, Nebraska; and the south Fremont area. Non-structural measures being examined include: flood insurance, flood proofing, flood warning, flood plain zoning, and evacuation and relocation of buildings. In addition, the study is also examining environmental restoration opportunities in the Lower Platte River basin. Each of the five specific locations being studied in detail involve a plan formulation phase in which various flood control alternative plans are given consideration, including non-structural solutions. The "no Corps action" alternative will also be considered.

The Sand Creek tributary element of the study will be accomplished in a separate integrated feasibility report/EIS because of its relationship to a proposed redesign of U.S. Highway 77 scheduled for construction in 2002. An earlier **Federal Register** notice addressing this study element was published on April 8, 1999 and a public scoping meeting was conducted on May 4, 1999 in Wahoo, Nebraska.

The remaining elements of study will either be accomplished in a comprehensive feasibility report/EIS, or

also in individual feasibility reports/EISs if the need is warranted. Some environmental restoration study elements may be accomplished in an environmental restoration report/environmental assessment format.

Scoping/public information meetings to discuss the Lower Platte River and Tributaries studies will be held July 6, 1999 at Mahoney State Park, Sapp Riverview Lodge; July 7, 1999 at the Papio-Missouri River Natural Resources District, 8901 S. 154th Street, Omaha; and July 8, 1999 at the North Bend Civic Auditorium, Main Street, North Bend. All three meetings will be from 6:30–8 p.m. Scoping comments will also be accepted by mail, phone, or email during the preparation of any and all draft reports. Draft reports will be circulated for review and comment.

FOR FURTHER INFORMATION CONTACT: Questions about the study elements should be directed to Robert S. Nebel, Environmental Resources Specialist, Environmental and Economics Section, Planning Branch, U.S. Army Corps of Engineers, 215 North 17th Street, Omaha, Nebraska 68102–4978, phone: (402) 221–4621, email: robert.s.nebel@usace.army.mil.

SUPPLEMENTARY INFORMATION: Environmental restoration needs and opportunities will be investigated that specifically fit the Corps' authorities—ones that restore degraded conditions caused by existing Corps projects (section 1135 of the Water Resources Development Act (WRDA) of 1986); or ones that restore aquatic ecosystem structure and function (section 206 of WRDA 1996) (no relationship to an existing Corps project is required); ones that usually include manipulation of the hydrology in and along bodies of water, including wetlands and riparian areas (section 206 of WRDA 1996); or ones that restore degraded streams, rivers, wetlands and other waterbodies to their natural condition as a means to control flooding, excessive erosion, and sedimentation (section 503 of WRDA 1996).

Chief, Environmental and Economics Section
Planning Branch.
