

model developed by the American Petroleum Institute (API). API's Graphical Approach for Determining Site-Specific Dilution-Attenuation Factors (DAFs) was presented to the Steering Committee and the Focus Group during the development of this *Guide*. API developed this approach to simplify calculation of facility-specific DAFs. A copy of API's User Manual for this graphical approach has been included on the CD-ROM. EPA solicits comment on API's request that this model be incorporated in the *Guide* as an alternative Tier 2 assessment tool.

Chapter 7b. Designing and Installing Liners and Caps: Construction and installation quality assurance and quality control are critical to ensuring liner and cap performance. The guidance is intended to reflect up-to-date installation practices and techniques and the appropriate materials and techniques for installing a liner system and a final cap.

- Are there additional practices and techniques that should be reflected in the guidance?
- For those with experience installing liners and operating lined units, how do you measure liner performance and what are your experiences over time when monitoring and addressing liner performance?

Chapter 7c. Designing a Land Application Program: The *Guide* recommends an evaluation framework for a number of waste and soil parameters, in addition to the constituents in Tier 1, that are important in designing an effective land application program. The *Guide* discusses the waste and soil parameters and their relationship to the establishment of an appropriate application rate as part of an effective land application program at a unit.

- Are there models or other tools available to simplify design and evaluation of a land application program?

#### *E. Ensuring Long Term Protection*

Chapter 9. Monitoring Performance: The *Guide* urges a multi-media approach to protective waste management. While the Monitoring Performance chapter briefly addresses monitoring other environmental media such as air, soil, and surface water, the chapter is devoted primarily to ground-water monitoring.

Should the guidance expand discussion and recommendations concerning monitoring other environmental media, and if so, how?

Chapter 11. Performing Closure and Post Closure Care: As discussed above under Protecting Ground Water: Assessing Risk, proper closure and post closure care are critical elements of a

program that ensures long term protection.

- Please comment on factors that should be taken into account in determining the time frame for post-closure care and in determining when it is appropriate to end post-closure care.
- What experience can you report regarding materials and construction techniques for final caps that work particularly well or that may pose problems?

The draft *Guide* represents a substantial amount of time and effort on the part of the Steering Committee and Focus Group representatives. EPA believes that the *Guide* has the potential to be widely used by States, industry, and the environmental community based on the voluntary nature of the guidance, the multi-media aspects of the *Guide*, and, in EPA's opinion, the quality of the work that will continue through the development of the final *Guide*. EPA looks forward to receiving comments on this *Guide* and working with the Steering Committee and the Focus Group as we develop a final *Guide* for industrial non-hazardous solid waste management.
