SUPPLEMENTARY INFORMATION:

Title: Weekly Activity Report, Form MMS-133. (This is a change in the title for this form which we announced in the previous notice as "Drilling Activity Report.")

OMB Control Number: 1010-XXXX.

Abstract: The Outer Continental Shelf (OCS) Lands Act, 43 U.S.C. 1331 *et seq.*,

as amended, requires the Secretary of the Interior to preserve, protect, and develop oil and gas resources in the OCS; make such resources available to meet the Nation's energy needs as rapidly as possible; balance orderly energy resources development with protection of the human, marine, and coastal environment; ensure the public a fair and equitable return on the resources offshore; and preserve and maintain free enterprise competition.

To carry out these responsibilities, we issued rules governing oil and gas and sulphur operations in the OCS. Regulations requiring the information collection that is the subject of this ICR are 30 CFR 250, subpart D, "Drilling Operations." Specifically, § 250.416(c)(3) requires respondents to submit copies of the daily driller's report at a frequency determined by the MMS District Supervisor, but in no prescribed format. Current practice in the Gulf of Mexico Region (GOMR) allows respondents to submit these data on a weekly basis during drilling operations.

We published a **Federal Register** notice with the required 60-day comment period soliciting comments on this ICR on March 18, 1999 (64 FR 13442). The notice announced that a new form MMS-133 would be used in all Regions and would be titled "Drilling Activity Report." However, during the comment period, we determined that this form would be used only in the GOMR and it would retain the same title as the unofficial GOMR form ("Weekly Activity Report"). Current reporting procedures for the information required by § 250.416(c)(3) will remain unchanged in the Pacific and Alaska OCS Regions.

We use this information to monitor the conditions of a well and status of drilling operations. Specifically, the District Office drilling engineers review the information to beware of the well conditions and current drilling activity (i.e., well depth, drilling fluid weight, casing types and setting depths, completed well logs, and recent safety equipment tests and drills). The engineers use this information to determine how accurately the lessee anticipated well conditions and if the lessee is following the approved application for permit to drill (APD). The information is also used by the engineers and District Supervisor to approve revisions to an APD. With this information at hand, they can analyze the proposed revision (i.e., revised grade of casing or deeper casing setting depth) and make a quick and informed decision on the request.
