

CYCLE FACILITY SAFETY INSPECTION PROGRAM.” SECY-99-188 is available in the Public Document Room and on the NRC Web Page at <http://www.nrc.gov/NRC/COMMISSION/SECYS/index.html>.

Purpose of Workshop

To obtain stakeholder views for improving the NRC oversight program for ensuring licensee and certificate holders maintain protection of worker and public health and safety, protection of the environment, and safeguards for nuclear material and sensitive information and material in the interest of national security. The oversight program applies to nuclear fuel cycle facilities regulated under 10 CFR Parts 40, 70, and 76. The facilities currently include gaseous diffusion plants, highly enriched uranium fuel fabrication facilities, low-enriched uranium fuel fabrication facilities, and a uranium hexafluoride (UF₆) production facility. These facilities possess large quantities of materials that are potentially hazardous (i.e., radioactive, toxic, and/or flammable) to the workers, public, and environment. In revising the oversight program, the goal is to have an oversight program that: (1) Provides earlier and more objective indications of acceptable and changing safety and safeguards performance, (2) increases stakeholder confidence in the NRC, and (3) increases regulatory effectiveness, efficiency, and realism. In this regard, the NRC desires the revised oversight program to be more risk-informed and performance-based and more focused on significant risks and poorer performers.

The workshop will focus on:

- Plans for communicating revision of the oversight program with stakeholders internal and external to the NRC;
- Objective and scope of safety and national security related cornerstones for meeting the NRC mission;
- Key performance attributes for achieving each cornerstone;
- Licensee performance attributes the NRC needs to monitor/assess by means of licensee provided performance indicators and NRC inspections to ensure cornerstone objectives are met;
- Criteria for selection of performance indicators and risk informed inspections;
- Measurable parameters and measurement methods for performance indicators; and
- Thresholds for performance.

DATES: Members of the public and other stakeholders are invited to attend and participate in the workshop, which is scheduled for 9:00 a.m. to 5:00 p.m. on Wednesday, March 22, and Thursday, March 23, 2000.
