

ecoregions it has identified.) Today's manual for Rivers and Streams also explains how States or Tribes can adopt nutrient water quality standards based on the ecoregional criteria values recommended by the EPA and/or RTAGs.

A directly prescriptive approach to nutrient criteria development is not appropriate due to regional differences that exist and the lack of a clear technical understanding of the relationship between nutrients, algal growth, and other factors (e.g., flow, light, substrata). Therefore, the approach chosen for criteria development must be tailored to meet the specific needs of each State or Tribe. The criteria development process described in this guidance can be divided into the following iterative steps.

1. Identify water quality needs and goals with regard to managing nutrient enrichment problems.
2. Classify rivers and streams first by type, and then by trophic status.
3. Select variables for monitoring nutrients, algae, macrophytes, and their impacts.
4. Design sampling program for monitoring nutrients and algal biomass in rivers and streams.
5. Collect data and build database.
6. Analyze data.
7. Develop criteria based on reference condition and data analyses.
8. Implement nutrient control strategies.
9. Monitor effectiveness of nutrient control strategies and reassess the validity of nutrient criteria.

The components of each step are explained in detail in succeeding chapters of the document. Appended to the guidance document are case studies from various ecoregions around the country and technical discussions of analytical methods, statistical analyses, and computer modeling.

The Nutrient Criteria Technical Guidance Document: Rivers and Streams that is being announced in this Notice was developed after consideration of public comment and peer review. The draft technical guidance manual for Rivers and Streams was placed on the EPA Nutrient website (<http://www.EPA.gov/OST/standards/nutrient.html>) on October 8, 1999, and EPA accepted correspondences and comments until June 23, 2000. In addition, a peer review of the proposed criteria document was conducted by a panel of five external reviewers.
