

monitor national trends, to identify newly emerging hazards for HCWs, to assess the risk of occupational infection, and to evaluate preventive measures, including engineering controls, work practices, protective equipment, and postexposure prophylaxis to prevent occupationally acquired infections. Hospitals that volunteer to participate in this system benefit by receiving technical support and standardized methodologies, including software, for conducting surveillance activities on occupational health.

This system was developed and piloted in large teaching hospitals (RFP-200-94-0834(P) and RFP-200-96-0524(P)). The first pilot included four hospitals and the second, five. After the refinement pilot in an additional 13

hospitals (PA-786 and interagency agreements), participation in NaSH became voluntary. The system is being made available to all acute-care hospitals in the United States wishing to participate voluntarily in the project. We anticipate no more than 100 hospitals participating by the end of fiscal 2000 and potentially 150 by fiscal 2002. To participate in NaSH, hospitals are required to provide information on all exposures to infectious agents, baseline information on the exposed HCWs, as well as the underreporting and hospital surveys.

A new component of NaSH will be a web-based surveillance for occupational exposures to blood that can be used by any health care facility and will meet OSHA requirements and needs

mandated by national and state legislation. Referred to as NaSH Lite, this module is an abbreviated version of the bloodborne pathogen exposure module. Data collected through NaSH Lite will help create a national database for benchmarking and for tracking trends in sharps-injuries as well as help health care facilities to record and prevent exposures. This module will be developed with OSHA input and in conjunction with state health departments. In addition, data collected through NaSH Lite will assist health care facilities to select, implement, and evaluate strategies (including safety devices) to prevent percutaneous exposures.

The average total burden hours are 37,397.
