SUPPLEMENTARY INFORMATION: Authority Issuance of permits and permit modifications, as required by the Endangered Species Act of 1973 (16 U.S.C. 1531-1543) (ESA), is based on a finding that such permits/modifications: (1) are applied for in good faith; (2) would not operate to the disadvantage of the listed species which are the subject of the permits; and (3) are consistent with the purposes and policies set forth in section 2 of the ESA. Scientific research and/or enhancement permits are issued under Section 10(a)(1)(A) of the ESA. Authority to take listed species is subject to conditions set forth in the permits. Permits and modifications are issued in accordance with and are subject to the ESA and NMFS

regulations governing listed fish and wildlife permits (50 CFR parts 222-226).

Those individuals requesting a hearing on an application listed in this notice should set out the specific reasons why a hearing on that application would be appropriate (see **ADDRESSES**). Species Covered in This Notice

The following species are covered in this notice:

Sea turtles

Threatened and endangered Green turtle (*Chelonia mydas*)

Endangered Hawksbill turtle (*Eretmochelys imbricata*)

Endangered Kemp's ridley turtle (*Lepidochelys kempi*)

Endangered Leatherback turtle (*Dermochelys coriacea*)

Threatened Loggerhead turtle (*Caretta caretta*)

Threatened and endangered Olive ridley turtle (*Lepidochelys olivacea*)

New Applications Received

Application 1299

The applicant requests a 3-year permit to take juvenile and adult turtles along the St. Joseph Peninsula, in St. Joseph Bay, Florida. The applicant proposes to examine the inter-nesting movements and habitat usage of adult loggerhead turtles along the northwestern coast of Florida, while also examining species composition, population densities and habitat utilization in coastal bays in the same area.

Permits and Modified Permits Issued

Permit #1190

Notice was published on August 31, 2000 (65 FR 52988) that the Regional Administrator, NMFS-SWR had applied for a modification to scientific research permit #1190. The modification request asked for an increase in the authorized take of all five listed turtle species. The increases were necessary due to higher numbers of turtles expected to be handled by observers expected under court mandated requirements. On August 4, 2000 a court order was issued and filed in U.S. District Court, District of Hawaii, requiring the National Marine Fisheries Service (NMFS) to increase its observer coverage to over 20% for the Hawaii longline fishery (historically, NMFS has had a 3%-5%

coverage level for the fishery). The modification increased the proposed numbers of turtles to be handled, measured, tagged and have samples collected by observers on longline vessels to: 40 green turtles; 100 leatherback turtles; 600 loggerhead turtles; 40 hawksbill turtles and 100 olive ridley turtles. The increases in maximum takes requested are proportional to the increase in observer coverage required.

The purpose of the research is to document and evaluate the incidental take of pelagic turtles by the longline fishery, to help estimate the impact of the fishery on listed turtles as individuals and as populations, and to determine methods to reduce that impact. Research will evaluate how incidental captures affect sea turtle anatomy and physiology as a function of season, location of take, water temperature, species, size, time of day, and gear configuration. The results of the research will help NMFS to better meet the goals and objectives of the Pacific Sea Turtle Recovery Plans, the Hooking Mortality Workshop, and the requirements of Section 7 Biological Opinions developed for this fishery, and ultimately, to fulfill ESA responsibilities to protect, conserve, and recover listed species.

Modification #2 to Permit #1190 was issued on February 20, 2001, authorizing take of listed species. Permit 1190 expires March 31, 2004.
