

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Dornier Luftfahrt GMBH: Docket 2001-NM-174-AD.

Applicability: Model 328-300 series airplanes, on which a forward engine mount vibration isolator has been removed or reinstalled since the date of manufacture of the airplane, certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (d) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent failure of the engine mount, which could result in separation of the engine from the airplane, accomplish the following:

One-Time Inspection

(a) For airplanes on which a forward engine mount vibration isolator has been removed or reinstalled prior to the effective date of this AD: Within 2,500 flight cycles after the first removal or reinstallation of a forward engine mount vibration isolator, or within 30 days after the effective date of this AD, whichever comes later, do a one-time torque test (inspection) of the attachment bolts of the forward engine mount vibration isolators on the left- and right-hand sides of the airplane to determine if the bolts are adequately torqued, according to Dornier Service Bulletin SB-328J-71-109, dated March 26, 2001, including Aircraft Maintenance Manual (AMM) Temporary Revision (TR) 71-130, dated March 8, 2001.

Replacement of Bolts

(b) During the inspection required by paragraph (a) of this AD, if the torque value of any attachment bolt is found to be outside the limits specified in Dornier Service Bulletin SB-328J-71-109, dated March 26, 2001, including AMM TR 71-130, dated March 8, 2001: Before further flight, do all actions associated with replacing all bolts on the vibration isolator on which the improperly torqued bolt was found (including performing a detailed visual inspection to determine the condition of

components of the vibration isolator and replacement of any damaged components with new components, removing the existing bolts and washers that attach the forward engine mount vibration isolators to the engine, installing new bolts to reattach the forward engine mount vibration isolators to the engine, and torquing the new bolts to adequate torque values), according to the service bulletin.

Note 2: For the purposes of this AD, a detailed visual inspection is defined as: "An intensive visual examination of a specific structural area, system, installation, or assembly to detect damage, failure, or irregularity. Available lighting is normally supplemented with a direct source of good lighting at intensity deemed appropriate by the inspector. Inspection aids such as mirror, magnifying lenses, etc., may be used. Surface cleaning and elaborate access procedures may be required."

Torque Requirements

(c) For all airplanes: As of the effective date of this AD, no one may install an attachment bolt on the forward engine mount vibration isolators on any airplane, unless the attachment bolt is torqued within the limits specified in Dornier 328-300 AMM TR 71-130, dated March 8, 2001.

Alternative Methods of Compliance

(d) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM-116, Transport Airplane Directorate, FAA. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM-116.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM-116.

Special Flight Permits

(e) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Note 4: The subject of this AD is addressed in German airworthiness directive 2001-163, dated June 14, 2001.

Issued in Renton, Washington, on September 7, 2001.

Vi L. Lipski,

Manager, Transport Airplane Directorate, Aircraft Certification Service.
