ENVIRONMENTAL PROTECTION AGENCY

[OPP-34159A; FRL-6765-7]

Amendment to Reregistration Eligibility Decision for Aluminum Phosphide and Magnesium Phosphide; Notice of Availability

AGENCY Environmental Protection Agency (EPA).

ACTION Notice.

SUMMARY In the Reregistration Eligibility Decision (RED) document issued for Aluminum Phosphide and Magnesium Phosphide in December 1998, several risks of concern were identified and mitigation measures proposed to address those risks. The RED also set forth a stakeholder process for obtaining input on the proposed mitigation measures or suggestions on how other methods could be employed to reduce the risks identified in the document. On November 8, 2000, after extensive discussions with USDA and interested stakeholders, the registrants of these pesticide active ingredients (a.i.) entered into a Memorandum of Agreement (MOA) with the Agency, the purpose of which is to implement mitigation measures to reduce risks and to gather information to better characterize risks to workers and bystanders. This MOA, which amends the Aluminum Phosphide and Magnesium Phosphide RED, is summarized below.

II. What Action is the Agency Taking?

EPA completed a risk assessment for the pest control fumigants aluminum and magnesium phosphide in September 1998. These materials release highly toxic phosphine gas when they react with the moisture in the atmosphere. This risk assessment identified risks of concern for applicators and occupational/residential bystanders, based on the available data and information. EPA issued a RED for Aluminum and Magnesium Phosphide in December 1998. The RED contained a series of proposed risk mitigation measures which are the focal point of an ongoing stakeholder process. These measures generally have been viewed very negatively by members of the user community who believe that implementation of such measures would be tantamount to cancellation of the chemical.

In the RED, EPA proposed risk mitigation measures which were designed to address the risks identified

in the risk assessment. The Agency, recognizing the importance of phosphine to agriculture, the lack of viable alternatives, and the potential impacts of the initial set of mitigation measures on the continued use of the chemicals, committed to pursue an extensive stakeholder involvement process regarding these measures with the expressed intent to gather information on the impacts of the proposed measures and, most importantly, to explore possible alternative mitigation measures that would achieve risk reduction while maintaining the ability to continue to use phosphine and achieve the benefits derived from that use.

The Agency has conducted an intensive stakeholder involvement program to address the risk issues associated with the use of phosphine fumigants. This process began with a lengthy public comment period. Over 570 comments were received during the comment period which ended in March 1999. The main issues of contention were the 500 foot buffer zone, notification of local residents prior to fumigation, and the lowering of the exposure standard from 0.3 ppm to 0.03 ppm, each of which were proposed as mitigation measures in the RED.

Further, USDA commissioned a Phosphine Task Force in 1999, whose purpose was to work with the Agency and the agricultural community during the phosphine review process. EPA worked closely with the Phosphine Task Force to further discuss use of fumigants and related risk issues, and to explore other measures to further mitigate those risks.

In addition to the Phosphine Task Force, the Phosphine Coalition, a broad-based group consisting of over 80 registrants, fumigation companies, trade organizations and users, was formed in 1998 to address issues related to the reregistration of the phosphine fumigants. This group has worked with EPA, USDA, and the registrants on the phosphine issue. Among other activities, the Phosphine Coalition arranged fumigation demonstrations in the field where Agency personnel and the user community had productive interactions. This group has also figured prominently in technical discussions with the registrants and EPA on risk assessment and risk management issues, and has provided extensive feedback and valuable input to the Agency throughout the reregistration process and the development of the MOA. Meanwhile, EPA has also conducted outreach with state lead agencies including several presentations at

SFIREG and conference calls with interested state officials.

Based in large part on input and feedback received during this stakeholder process, EPA and the registrants have entered into a Memorandum of Agreement, the purpose of which is to implement mitigation measures to meaningfully reduce risks and gather information to better characterize risks to workers and bystanders. The following is a short summary of the main points in the agreement. The text of the entire agreement can be found at <http://www.epa.gov/REDs>.

1. Site Fumigation Management Plans
 - (a) Monitoring
 - (b) Notification of authorities
 - (c) Notification of bystanders in the event of a release
2. Development of guidance for plans as part of the label language.
3. Conducting Air monitoring Studies (worker and bystander)
4. Toxicology Studies or 0.01 ppm standard
5. 2 annual incident analyses reports
6. Financial and technical support for a training and certification improvement program.
7. Prohibition of in-transit aeration
8. Stricter definition of "under the supervision of a certified applicator"
9. Enhanced notification of receivers of fumigated rail cars and other containers
10. Two-person rule for fumigations requiring entry into a structure
11. Provision of safety material to residents having burrows treated

The MOA requires that registrants submit draft interim fumigation management plan guidance to the EPA by January 1, 2001 which has been completed. Draft label revisions are due to the EPA from the registrants no later than June 1, 2001. Further, the MOA requires the submission of the first annual incident analysis report and draft protocols/feasibility studies for the collection of monitoring data to the EPA by April 1, 2001. The training and certification improvement program required in the MOA will also begin in 2001.
