SUPPLEMENTARY INFORMATION: Flathead Lake is the largest natural fresh water lake in the western United States. It is home to the Confederated Salish and Kootenai Tribes of the Flathead Nation, whose Reservation encompasses an area including approximately the southern half of Flathead Lake. Flathead Lake is regulated by the operation of Kerr Dam, located at River Mile 72.0 at Polson, Montana. The Kerr Dam and Hydroelectric Project is located inside the exterior boundaries of the Flathead Indian Reservation and operates under a joint license issued by FERC on July 17, 1985 to PPL Montana, LLC, successor-in-interest to the Montana Power Company, and the Confederated Salish and Kootenai Tribes. The license has been amended several times since initial issuance.

Section 4(e) of the Federal Power Act authorizes the Secretary of the Interior to include conditions in hydropower licenses for the protection and utilization of Indian reservations. Under this authority, the Secretary of the Interior required that certain articles be included in the Kerr Project license for the protection and utilization of the Flathead Indian Reservation. Among these license articles are Article 56, which requires minimum instream flow rates for the protection of fisheries and other resources in the Lower Flathead River below Kerr Dam and Article 60, which requires the development and implementation of a drought management plan.

In addition, as set forth in Article 43, the Kerr Project is currently operated for flood control according to a 1962 Memorandum of Understanding, as amended, between PPL Montana, LLC, successor-in-interest to the Montana Power Company, and the U.S. Army Corps of Engineers.

During low water years, conflicts may occur between the minimum instream flow requirements of Article 56 and these flood control requirements. The drought management plan required by Article 60 is to resolve such potential conflicts.

The proposed action is to meet the requirements of Article 60 of the Kerr Hydroelectric Project license, issued by the Federal Energy Regulatory Commission (FERC). Article 60 calls for the development and implementation of a drought management plan by the licensees in consultation with the U.S. Army Corps of Engineers, U.S. Bureau of Reclamation, Bureau of Indian Affairs and Montana Department of Environmental Quality. Article 60 also

requires that the drought management plan include a re-evaluation and adjustment of flood control requirements and other provisions necessary for compliance with lower Flathead River minimum instream flow mandates. PPL Montana, LLC, current operator of the Kerr Project, submitted a proposed drought management plan to the Secretary of the Interior on March 4, 2002. Under Article 60, the Secretary of the Interior has the authority to reject, modify, or otherwise alter the proposed drought management plan.

The Bureau of Indian Affairs has been delegated the responsibility to serve as the Lead Agency for National Environmental Policy Act compliance in connection with the proposed drought management plan. Issues to be addressed in the environmental analysis include, but are not limited to, hydroelectric power production, recreation, tourism, irrigation and farming, treaty-protected fisheries, biological resources, wildlife habitat, and Indian traditional and cultural properties and resources.

Alternatives to the proposed drought management plan to be examined in the EIS may include a variety of measures, such as adjustments to flood control rule curves, implementation of advanced climate prediction initiatives, and deviation from minimum instream flow requirements. The range of environmental issues and alternatives will be further developed based upon comments received during the scoping process.

Bureau of Reclamation

[FES 02-18]

American River Pump Station Project, Placer County, California

AGENCY: Bureau of Reclamation, Interior.

ACTION: Notice of availability of the Final Environmental Impact Statement/Environmental Impact Report (EIS/EIR).

SUMMARY: The Bureau of Reclamation (Reclamation) and the Placer County Water Agency (PCWA) have prepared a Final EIS/EIR for the American River Pump Station Project.

The proposed project would develop a pump station and related facilities on the North Fork American River near Auburn, California. The project would allow PCWA to convey its Middle Fork Project water entitlement to the Auburn Ravine tunnel to meet demands within its service area, eliminate safety concerns associated with the Auburn Dam construction bypass tunnel, restore the dewatered portion of the North Fork American River at the Auburn Dam construction site, and provide public river access in the project area. Both facilities and diversion-related impacts are addressed in the Draft EIS/EIR.

Notice of the Draft EIS/EIR was published in the **Federal Register** on September 13, 2001 (66 FR 47685). The public hearing was held on October 11, 2001. The written comment period ended December 13, 2001. The Final EIS/EIR contains responses to all comments received and changes made to the text of the Draft EIS/EIR as a result of those comments.

DATES: Reclamation will not make a decision on the proposed action until 30 days after release of the Final EIS/EIR. After the 30-day waiting period, Reclamation will complete a Record of Decision (ROD). The ROD will state the action that will be implemented and will discuss all factors leading to the decision.

ADDRESSES: Copies of the Final EIS/EIR in hard copy or on CD may be requested from Ms. Carol Brown, Surface Water Resources, Inc., at (916) 563-6360. The document can also be viewed on Reclamation's web page at http://www.mp.usbr.gov/F_projects.html.

See Supplementary Information section for locations where copies of the Final EIS/EIR are available for public inspection.
