EFFECTIVE DATE: August 14, 2002.

FOR FURTHER INFORMATION CONTACT:

Martha V. Douthit or James Maeder, Office of Policy for Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Ave., NW, Washington, D.C. 20230; telephone: (202) 482-5050 or (202) 482-3330, respectively.

SUPPLEMENTARY INFORMATION:

Background:

On March 1, 2002, the Department initiated, and the Commission instituted, a sunset review of the antidumping duty order on brake rotors from PRC, pursuant to section 751(c) of the Act.³ As a result of its review, the Department found that revocation of the antidumping duty order would be likely lead to continuation or recurrence of dumping and notified the Commission of the magnitude of the margins likely to prevail were the order to be revoked.⁴

On August 2, 2002, the Commission determined, pursuant to section 751(c) of the Act, that revocation of the antidumping duty order on brake rotors from the PRC would be likely to lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.⁵

Scope:

The products covered by this antidumping duty order are brake rotors made of gray cast iron, whether finished, semifinished, or unfinished, ranging in diameter from 8 to 16 inches (20.32 to 40.64 centimeters) and in weight from 8 to 45 pounds (3.63 to 20.41 kilograms). The size parameters (weight and dimension) of the brake rotors limit their use to the following types of motor vehicles: automobiles, all-terrain vehicles, vans and

recreational vehicles under "one ton and a half," and light trucks designated as "one ton and a half." Finished brake rotors are those that are ready for sale and installation without any further operations. Semi-finished rotors are those on which the surface is not entirely smooth, and have undergone some drilling. Unfinished rotors are those which have undergone some grinding or turning. These brake rotors are for motor vehicles, and do not contain in the casting a logo of an original equipment manufacturer ("OEM") which produces vehicles sold in the United States (e.g., General Motors, Ford, Chrysler, Honda, Toyota, Volvo). Brake rotors covered in the order are not certified by OEM producers of vehicles sold in the United States. The scope also includes composite brake rotors that are made of gray cast iron, which contain a steel plate, but otherwise meet the above criteria. Excluded from the scope of the order are brake rotors made of gray cast iron, whether finished, semifinished, or unfinished, with a diameter less than 8 inches or greater than 16 inches (less than 20.32 centimeters or greater than 40.64 centimeters) and a weight less than 8 pounds or greater than 45 pounds (less than 3.63 kilograms or greater than 20.41 kilograms).

Brake rotors are currently classifiable under subheading 8708.39.50.10 of the *Harmonized Tariff Schedule of the United States* ("HTSUS"). Although the HTSUS subheading is provided for convenience and customs purposes, the written description of the merchandise subject to the order is dispositive.

Determination:

As a result of the determinations by the Department and the Commission that revocation of this antidumping duty order would be likely to lead to continuation or recurrence of dumping and material injury to an industry in the United States, pursuant to section 751(d)(2) of the Act, the Department hereby orders the continuation of the antidumping duty order on brake rotors from the PRC. The Department will instruct Customs to continue to collect antidumping at the rates in effect at the time of entry for all imports of subject merchandise. The effective date of continuation of this order will be the date of publication in the **Federal Register** of this Notice of Continuation. Pursuant to section 751(c)(2) and 751(c)(6) of the Act, the Department intends to initiate the next five-year review of this order not later than July 2007.

Dated: August 8, 2002.

Faryar Shirzad,

Assistant Secretary for Import Administration.

Correction to Scope of Investigations

On July 19, 2002, the Department issued the Notice of Final Determination of Sales at Less Than Fair Value for Certain Cold-Rolled Carbon Steel Flat Products From Australia (*Australia Cold-Rolled Final*), one of the concurrent investigations on cold-rolled steel products, 67 FR 47509 (July 19, 2002). A description of the scope of these investigations was contained in the "Scope Appendix" attached to the *Australia Cold-Rolled Final*. However, one of the exclusions of porcelain enameling sheet was not fully described in that appendix and the exclusion of texture-rolled steel strip (SORBITEX) did not contain the proper width measurement in that appendix. The corrected scope is appended to this notice. For a full discussion of the comments received on the preliminary scope rulings see the "Issues and

Appendix I: Final Scope Rulings; Scope of the AD/CVD Investigations on Certain Cold-Rolled Steel Products

Scope of Investigation

For purposes of this investigation, the products covered are certain cold-rolled (cold-reduced) flat-rolled carbon-quality steel products, neither clad, plated, nor coated with metal, but whether or not annealed, painted, varnished, or coated with plastics or other non-metallic substances, both in coils, 0.5 inch wide or wider, (whether or not in successively superimposed layers and/or otherwise coiled, such as spirally oscillated coils), and also in straight lengths, which, if

less than 4.75 mm in thickness having a width that is 0.5 inch or greater and that measures at least 10 times the thickness; or, if of a thickness of 4.75 mm or more, having a width exceeding 150 mm and measuring at least twice the thickness. The products described above may be rectangular, square, circular or other shape and include products of either rectangular or non-rectangular cross-section.

Specifically included in this scope are vacuum degassed, fully stabilized (commonly referred to as interstitial-free (IF)) steels, high strength low alloy (HSLA) steels, and motor lamination steels. IF steels are recognized as low carbon steels with micro-alloying levels of elements such as titanium and/or niobium added to stabilize carbon and nitrogen elements. HSLA steels are recognized as steels with micro-alloying levels of elements such as chromium, copper, niobium, titanium, vanadium, and molybdenum. Motor lamination steels contain micro-alloying levels of elements such as silicon and aluminum.

Steel products included in the scope of this investigation, regardless of definitions in the HTSUS, are products in which: (1) Iron predominates, by weight, over each of the other contained elements; (2) the carbon content is 2% or less, by weight, and; (3) none of the elements listed below exceeds the quantity, by weight, respectively indicated: 1.80% of manganese, or 2.25% of silicon, or 1.00% of copper, or 0.50% of aluminum, or 1.25% of chromium, or 0.30% of cobalt, or 0.40% of lead, or 1.25% of nickel, or 0.30% of tungsten, or 0.10% of molybdenum, or 0.10% of niobium (also called columbium), or 0.15% of vanadium, or 0.15% of zirconium.

All products that meet the written physical description, and in which the chemistry quantities do not exceed any one of the noted element levels listed above, are within the scope of this investigation unless specifically excluded.

The following products, by way of example, are outside and/or specifically excluded from the scope of this investigation:
