**SUPPLEMENTARY INFORMATION:** On July 22, 2002, notice was published in the

**Federal Register** (67 FR 47774) that a request for a scientific research permit to take the species identified above had been submitted by the above-named individual. The requested permit has been issued under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), and the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR part 216).

The permit authorizes implantation of dual satellite-linked life history transmitters in up to 30 rehabilitated California sea lions at the Marine Mammal Center to determine long-term post-release survival rates. External tags will also be attached for short-term monitoring. To assess stress levels from surgical procedures, and to relate post-rehabilitation health status to survival, blood samples will be collected for standard clinical hematology and chemistry panels. Blubber biopsies, bioelectrical impedance analysis, deuterium dilution determinations, and blubber ultrasound will also be performed. In addition, three control groups of California sea lions of similar age undergoing rehabilitation at TMMC will be utilized to compare short-term effects on animals with the implanted tags to animals without the implanted tags having similar procedures (e.g., anesthesia, laparoscopy) performed as part of their rehabilitation. Up to a total of 90 control animals (three groups of 30) will be used in this study, and will have some or all of the following procedures performed: blood and blubber sampling, bioelectrical impedance analyses, deuterium dilutions, and blubber ultrasound. The permit is for a five year period.
