

Under the no-action alternative, the fielding of the AAV and the demolition, modification, and construction of maintenance and training facilities at MCB Camp Pendleton would not occur. AAV training exercises would not be conducted at SCIRC. The use of the AAV fleet would be continued at MCB Camp Pendleton and SCIRC. However, the continued use of the AAV would not meet the purpose of and need for the proposed action and would not satisfy the need for the newer technology required to meet the mission of the Department of the Navy. It has been determined that the proposed action is the preferred alternative.

Impacts to archeological resources at MCB Camp Pendleton associated with training and operations in the mechanized maneuver areas would be potentially significant. To mitigate this impact, the Marine Corps will complete a cultural resource inventory of the mechanized maneuver areas pursuant to a multi-year condition assessment, site monitoring, and effects treatment plan. The California State Historic Preservation Officer approved this Plan. MCB Camp Pendleton supports 18 species Federally listed as threatened or endangered. Pursuant to the Endangered Species Act, the Marine Corps consulted with USFWS and National Oceanic and Atmospheric Administration's Fisheries Service (NOAA Fisheries). These agencies issued a biological opinion (USFWS) and a letter (NOAA Fisheries) in support of AAV training at Camp Pendleton. The Marine Corps will conduct training in accordance with the provisions of the biological opinion and letter, copies of which are included in the final EIS. Under the Clean Air Act General Conformity rule, the emissions caused by the proposed action would be below *de minimis* levels and would not be regionally significant. Therefore, the Marine Corps has determined that the proposed action will conform with the State Implementation Plan. The Marine Corps has determined and the California Coastal Commission concurred that the proposed action will be consistent with the State Coastal Zone Management Plan.

The draft EIS was provided to the public for a 53-day review period. During this period three comment letters were received from U.S. Environmental Protection Agency, U.S. Department of Interior, and San Diego County Archaeological Society. The U.S. Environmental Protection Agency submitted comments primarily on air and water quality concerns. The U.S. Department of Interior submitted comments primarily on the use of

SCIRC and sensitive biological resources potentially affected at MCB Camp Pendleton. These comments were addressed in the final EIS, which was distributed to the public on May 9, 2003, for a 30-day public review period. During this period, one letter was received from the California Department of Toxic Substances Control. Their concerns involved compliance with appropriate laws and regulations governing hazardous substances. The final EIS addresses these issues in detail and appropriate regulations governing hazardous substances will be followed during construction activities. In addition, USFWS verbally requested clarification of how unresolved issues for the AAV on SCIRC would be resolved. As discussed in the final EIS, AAV training would be conducted in accordance with protocols developed during preparation of the SCIRC EIS/OEIS.

On behalf of the Department of the Navy, I have decided to implement introduction of the AAV at MCB Camp Pendleton, including construction of associated support facilities. In making this decision I considered the requirements of the Marine Corps, the potential environmental impacts of this action, social and economic concerns, and other comments received during the EIS process. All practicable means to avoid or minimize environmental harm from implementing introduction of the AAV at MCB Camp Pendleton have been adopted. After carefully weighing all of these factors I have determined that introduction of the vehicle at MCB Camp Pendleton best meets the requirements of the proposed action.
