### Proposed Deepwater Port Background Information

The proposed Port Pelican LLC Deepwater Port would deliver natural gas to the United States Gulf Coast using existing gas supply and gathering systems in the Gulf of Mexico and southern Louisiana. Gas would then be delivered to shippers using the national pipeline grid through interconnections with major interstate and intrastate pipelines.

The project would consist of two concrete gravity based structure (GBS) units fixed to the seabed, which would include integral liquefied natural gas (LNG) storage tanks, support deck mounted LNG receiving and vaporization equipment and utilities, berthing accommodations for LNG carriers, facilities for delivery of natural gas to a pipeline transportation system, and personnel accommodations.

A 42-inch diameter offshore Pelican Interconnector Pipeline (PIPL), 37 nautical miles in length, would be constructed as part of the project. The PIPL would transport gas from the terminal to a point near the Tiger Shoal Platform "A" where it would connect to the Henry Hub. The Henry Hub would deliver the gas to the onshore U.S. gas pipeline network.

### License Application Background Information

The Port Pelican LLC Deepwater Port license application was submitted to the Secretary of Transportation on November 25, 2002.
