Student Assistance General Provisions, Federal Supplemental Educational Opportunity Grant, Federal Family Education Loan, Federal Work-Study, Federal Perkins Loan, Federal Pell Grant, Leveraging Educational Assistance Partnership, and William D. Ford Federal Direct Loan Programs

ACTION: Notice of deadline dates for receipt of applications, reports, and other records for the 2003-2004 award year.

SUMMARY: The Secretary announces deadline dates for the receipt of documents and other information from institutions and applicants for the Federal student aid programs authorized under Title IV of the Higher Education Act of 1965, as amended, for the 2003-2004 award year. The Federal student aid programs include the Federal Perkins Loan, Federal Work-Study, Federal Supplemental Educational Opportunity Grant, Federal Family Education Loan, William D. Ford Federal Direct Loan, Federal Pell Grant, and Leveraging Educational Assistance Partnership programs.

These programs, administered by the U.S. Department of Education

(Department), provide financial assistance to students attending eligible postsecondary educational institutions to help them pay their educational costs.

Deadline and Submission Dates: See Tables A and B at the end of this notice.

Table A—Deadline Dates for Application Processing and Receipt of Student Aid Reports (SARs) or Institutional Student Information Records (ISIRs) by Institutions

Table A provides deadline dates for application processing, including corrections, and, for purposes of the Federal Pell Grant Program, receipt by institutions of SARs or ISIRs.

Table B—Federal Pell Grant Program Submission Dates for Disbursement Information by Institutions

Table B provides the earliest submission and deadline dates for institutions to submit Federal Pell Grant disbursement records to the Department's Common Origination and Disbursement (COD) System.

In general, an institution must submit Federal Pell Grant disbursement records no later than 30 days after making a disbursement or becoming aware of the need to adjust a student's previously reported Federal Pell Grant disbursement. We consider that Federal Pell Grant funds are disbursed on the earlier of the date that the institution: (a) Credits those funds to a student's account in the institution's general ledger or any subledger of the general ledger, or (b) pays those funds to a student directly. We consider that Federal Pell Grant funds are disbursed even if an institution uses its own funds

in advance of receiving program funds from the Department [34 CFR 668.164(a)]. An institution's failure to submit disbursement records within the required 30-day timeframe may result in an audit or program review finding. In addition, the Secretary may initiate an adverse action, such as a fine or other penalty for such failure.

AGENCY: Department of Energy (DOE).

ACTION: Notice inviting grant applications.

SUMMARY: The Office of Biological and Environmental Research (OBER) of the Office of Science (SC), U.S. Department of Energy (DOE), hereby announce its interest in receiving grant applications to support one specific research area within the Medical Applications Program: Innovative Technologies for *In Vivo* Targeted Radiopharmaceutical Dose Delivery and Deposition. The emphasis will be on the therapeutic use of ionizing radiation. The specific goals include: (1) development of radiochemical methodologies for labeling the targeting molecules with and for site-specific delivery of therapeutic dose levels of radioactivity, and (2) development of radiobiology-based microdosimetry techniques to accurately measure and predict the potential therapeutic use, dose and dose rate delivery of ionizing radiation. Applicants are encouraged to propose innovative methodologies and technologies to label biological ligands with therapeutic level radioactivity, ensure *in vivo* delivery of intact radioisotopically labeled molecules to specific tumor cell types, and develop novel microdosimetry paradigms. Applications for clinical trials using already developed compounds and techniques will not be considered.

DATES: Before preparing a formal application, potential applicants are encouraged to submit a brief preapplication. All preapplications referencing Program Notice DE-FG01-04ER04-17, should be received by DOE by 4:30 p.m., eastern time, April 12, 2004. A response encouraging or discouraging the submission of a formal application will be communicated by electronic mail within approximately 2 weeks.

SUPPLEMENTARY INFORMATION: The BER Medical Applications Program supports directed nuclear medicine technology research in the areas of radiopharmaceutical development, molecular nuclear medicine and advanced biomedical imaging to promote the use of radioisotopes for non-invasive diagnosis and therapy.

The early BER programs focused on understanding the physical, chemical and biologic consequences of radionuclide decay in the human body. Those studies led to much of the basic information that is still used today to describe the therapeutic effects of targeted radionuclides. DOE continued to fund projects and develop technologies for therapeutic effect and use of radiation that generated much of the current knowledge in radioisotope chemistry, identification of targeting agents, methods for chemical coupling of isotopes to targeting agents, scanning and imaging techniques, mathematical modeling and internal radiation dosimetry. This research has formed the basis for many current cancer targeted radionuclide therapy modalities in various stages of development.

Current themes have developed about radiation's main molecular targets, absorbed energy doses and resultant radiation damage. This has led to the development of defined absorbed doses (Gy, Sv) that dominate our predictions about tumor destruction and normal tissue damage. Most radiobiology has been focused on radiation damage induced by high dose rate gamma and neutron exposures. Targeting with electrons, alpha and beta emitters employed at intermediate to low dose rate intensities requires a much better understanding of radiation damage to cells, and new paradigms need to be addressed to understand how best to use radioisotopes for selective destruction of solid tumors as compared to normal tissue. The recent emphasis on targeted radiopharmaceutical therapy agents against many forms of cancer has brought about an increase in the need for reliable and clinically meaningful, patient-specific internal dose calculations. The ability to link radiation dose to observed biological effect of radiation is complicated by a number of factors, including the heterogeneity of the activity distribution within normal organ tissue or within tumors, the range of the particles delivering the therapeutic dose, the total dose received, the dose rate at which the dose is delivered, (which depends on
