Title: NSPS for Primary and Secondary Emissions from Basic Oxygen Furnaces (Renewal).

Abstract: The New Source Performance Standards (NSPS) for the regulations published at 40 CFR part 60, subparts N and Na were proposed on were proposed on June 11, 1973, and promulgated on March 8, 1974. These regulations apply to each basic oxygen process furnace (BOPF) in an iron and steel plant commencing construction, modification or reconstruction after the date of a proposal. An opacity limit was promulgated on April 13, 1978, as a supplement to the mass standard. On January 20, 1983, amendments to the Standards of Performance for Primary Emissions from Basic Oxygen Process Furnaces, merged with Standards of Performance for Secondary Emissions from Basic Oxygen Process Steelmaking Facilities (Subpart Na). Subpart Na is applicable to any top-blown BOPF, hot metal transfer station or skimming station for which construction, reconstruction, or modification commenced after January 20, 1983.

The monitoring, recordkeeping, and reporting requirements outlined in the rule are similar to those required for other NSPS regulations. Consistent with the NSPS General Provisions (40 CFR part 60, subpart A), respondents would submit initial notifications, conduct performance test and report test results for the primary emission control devices, and submit periodic reports. Sources also must develop and implement a Startup, Shutdown, and Malfunction Plan (SSMP) and submit semiannual reports of any event where the procedures in the plan were not followed. These notifications, reports, and records are essential in determining compliance, and are required of all sources subject to NSPS. Any owner or operator subject to the provisions of this part shall maintain a file of these measurements, and retain the file for at least two years following the date of such measurements, maintenance reports, and records.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB Control Number. The OMB Control Numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR chapter 15, and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 158 hours

(rounded) per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Basic oxygen process furnace shops at iron and steel plants with furnaces, skimming stations and/or hot metal transfer stations.

Estimated Annual Number of Respondents: 5.

Frequency of Response: Initial, semiannual and on occasion.

Estimated Total Annual Hour Burden: 1,896 hours.

Estimated Total Annual Costs: \$179,440, which includes \$18,000 annualized capital/startup costs, \$8,397 annual O&M costs, and \$153,043 annual labor costs.

Changes in the Estimates: There is an increase of 884 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This increase is due to an increase in the number of modified/reconstructed sources. There is also a small increase on the annualized cost on the renewal of this ICR (from \$25,794 to 26,397 or \$603) associated with an increase in the operation and maintenance costs resulting from the increase in the number of sources. However, this increase is not reflected in the OMB 83-I form due to rounding of the values.
