

Specifically, the proposed amendment would have clearly identified the appropriate actions to be taken if an SFRCS instrumentation channel's output logic becomes inoperable; relocated the SFRCS instrumentation trip setpoints from the TSs to the Updated Safety Analysis Report; and decreased the SFRCS instrument channel functional test frequency from monthly to quarterly and made associated changes to the trip setpoint allowable values.

The Commission had previously issued a Notice of Consideration of Issuance of Amendment published in the **Federal Register** on September 30, 2003 (68 FR 56343). However, by letter dated August 9, 2005, the licensee withdrew the proposed change.

For further details with respect to this action, see the application for amendment dated August 25, 2003 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML032410076), as supplemented by letter dated June 4, 2004 (ADAMS Accession No. ML041610286), and the licensee's letter dated August 9, 2005 (ADAMS Accession No. ML052230259), which withdrew the application for license amendment. NUCLEAR REGULATORY COMMISSION

Draft Regulatory Guide: Issuance, Availability

The U.S. Nuclear Regulatory Commission (NRC) has issued for public comment a draft revision to an existing guide in the agency's Regulatory Guide Series. This series has been developed to describe and make available to the public such information as methods that are acceptable to the NRC staff for implementing specific parts of the NRC's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

The draft Revision 4 of Regulatory Guide 1.97, entitled "Criteria for Accident Monitoring Instrumentation for Nuclear Power Plants," is temporarily identified by its task number, DG-1128, which should be mentioned in all related correspondence. Like its predecessors, this proposed revision describes a method that the NRC staff considers acceptable for use in complying with the agency's regulations with respect to satisfying criteria for accident monitoring instrumentation in nuclear power plants. Specifically, the method described in this regulatory guide relates to General Design Criteria 13, 19, and 64, as set forth in Appendix A to Title 10, Part 50, of the Code of Federal Regulations (10 CFR Part 50), "Domestic Licensing of Production and Utilization Facilities."

This proposed revision of Regulatory Guide 1.97 represents an ongoing evolution in the nuclear industry's thinking and approaches with regard to accident monitoring systems for the Nation's nuclear power plants. Specifically, this revision endorses (with certain clarifying regulatory positions specified in Section C of Draft Regulatory Guide DG-1128) the "Criteria for Accident Monitoring Instrumentation for Nuclear Power Generating Stations," which the Institute of Electrical and Electronics Engineers (IEEE) promulgated as IEEE Std. 497-2002.

This revised regulatory guide is intended for licensees of new nuclear power plants.¹ Previous revisions of this regulatory guide remain in effect for

¹ The terms "new nuclear power plant" and "new plant" refer to any nuclear power plant for which the licensee obtained an operating license after the NRC issued Revision 4 of Regulatory Guide 1.97. The terms "current operating reactor" and "current plant" refer to any nuclear plant for which the licensee obtained an operating license before the NRC issued Revision 4 of Regulatory Guide 1.97.

licensees of current operating reactors,¹ who are unaffected by this proposed revision. However, licensees of current operating reactors may voluntarily convert their entire accident monitoring program to the criteria in this proposed revision.

Please mention DG-1128 in the subject line of your comments.
