SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. Potentially affected entities may include, but are not limited to:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).

B. What Should I Consider as I Prepare My Comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through regulations.gov or e-mail. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD ROM that you mail to EPA, mark the outside of the disk or CD ROM as CBI and then identify electronically within the disk or CD ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When submitting comments, remember to:

- i. Identify the document by docket number and other identifying information (subject heading, **Federal Register** date and page number).
- ii. Follow directions. The Agency may ask you to respond to specific questions

or organize comments by referencing a Code of Federal Regulations (CFR) part or section number.

iii. Explain why you agree or disagree; suggest alternatives and substitute language for your requested changes.

iv. Describe any assumptions and provide any technical information and/or data that you used.

v. If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.

vi. Provide specific examples to illustrate your concerns, and suggest alternatives.

vii. Explain your views as clearly as possible, avoiding the use of profanity or personal threats.

viii. Make sure to submit your comments by the comment period deadline identified.

II. What Action is the Agency Taking?

EPA is printing a summary of a pesticide petition received under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a, proposing the establishment or amendment of regulations in 40 CFR part 180 for residues of pesticide chemicals in or on various food commodities. EPA has determined that this pesticide petition contains data or information regarding the elements set forth in FFDCA section 408(d)(2); however, EPA has not fully evaluated the sufficiency of the submitted data at this time or whether the data support granting of the pesticide petition. Additional data may be needed before EPA rules on this pesticide petition.

Pursuant to 40 CFR 180.7(f), a summary of the petition included in this notice, prepared by the petitioner along with a description of the analytical method available for the detection and measurement of the pesticide chemical residues is available on EPA's Electronic Docket at <http://www.regulations.gov/>. To locate this information on the home page of EPA's Electronic Docket, select "Quick Search" and type the OPP docket ID number. Once the search has located the docket, clicking on the "Docket ID" will bring up a list of all documents in the docket for the pesticide including the petition summary.

Amendment to Existing Tolerance

PP 1F6313. BASF Corporation, 26 Davis Drive, P.O. Box 13528, Research Triangle Park, NC 27709-3528, proposes to amend the tolerances in 40 CFR 180.589 by lowering the established 1.0 parts per million (ppm) tolerances to 0.1 ppm for indirect or inadvertent residues of the fungicide boscalid (BAS 510F);

[3-pyridinecarboxamide, 2-chloro-N-(4'-chloro(1,1'-biphenyl)-2-yl)] in or on the food commodities beet, garden, roots; beet, sugar, roots; radish, roots; turnip, roots; and vegetable, root and tuber, leaves, Group 2 at 0.1 ppm. For the analytical method in plants, the parent residue is extracted using an aqueous organic solvent mixture followed by liquid/liquid (L/L) partitioning and a column clean-up. Quantitation is by gas chromatography using mass spectrometry (GS/MS). For livestock, the residues are extracted with methanol. The extract is treated with enzymes in order to release the conjugated glucuronic acid metabolite. The residues are then isolated by L/L partition followed by column chromatography. The hydroxylated metabolite is acetylated followed by a column clean-up. The parent and acetylated metabolite are quantitated by GC with electron capture detection. The original notice of filing for PP 1F6313 was published on February 14, 2003 (68FR7542), and the resultant final rule was published on July 30, 2003 (68FR44640). As per the final rule and associated notice of pesticide registration, the BASF Corporation was conditionally required to submit more extensive field data on the vegetable, root, Subgroup 1B. Because the conditional data will result in lowering the 1.0 ppm tolerances established in the final rule to 0.1 ppm, a revised petition, notice of filing, final rule, and a public comment period are required.

II. Background

What Action is the Agency Taking?

Under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) (7 U.S.C. 136p), at the discretion of the Administrator, a Federal or State agency may be exempted from any provision of FIFRA if the Administrator determines that emergency conditions exist which require the exemption. The Oregon Department of Agriculture has requested the Administrator to issue a specific exemption for the use of ethoprop on baby hops to control garden symphylans (*Scutigerella immaculata*). Information in accordance with 40 CFR part 166 was submitted as part of this request.

As part of this request, the Applicant asserts that there are no symphylian control products labeled for use on hops, nor are there any available cultural control methods. The impact of symphylans on baby hops is two-fold. First, the newly planted baby hop plants are easily devastated by garden symphylans as a primary pest that infests the root system. The secondary effect of symphylian infestation is that the plant is now weakened and less able to defend itself against other diseases and pests. Growers have documented losses of 15 to 100%, which would result in significant economic losses.

The Applicant proposes to make no more than one ground application post-plant, pre-emergence to a maximum of 300 acres of baby hops in Oregon at a rate of 3 pounds ethoprop (0.5 gallons of product) per acre. A maximum of 900 lbs. active ingredient would be applied between February 15 and May 31, 2006.

This notice does not constitute a decision by EPA on the application itself. The regulations governing section 18 of FIFRA require publication of a notice of receipt for an application for a specific exemption proposing a use, which has been requested in 3 or more previous years, and a petition for a tolerance has not yet been submitted to the Agency.

As noted above, the Agency is eliminating the comment period due to the urgent nature of emergency situation and the very narrow and extremely limited use being requested. Nonetheless, interested parties may still contact the Agency with comments about this notice and proposed treatment program.
