Federal Open Market Committee; Domestic Policy Directive of December 13, 2005

In accordance with § 271.25 of its rules regarding availability of information (12 CFR part 271), there is set forth below the domestic policy directive issued by the Federal Open Market Committee at its meeting held on December 13, 2005.¹

The Federal Open Market Committee seeks monetary and financial conditions that will foster price stability and promote sustainable growth in output. To further its long-run objectives, the Committee, in the immediate future, seeks conditions in reserve markets consistent with increasing the federal funds rate to an average of around 4¼ percent.

The vote encompassed approval of the paragraph below for inclusion in the statement to be released shortly after the meeting:

“The Committee perceives that, with appropriate monetary policy action, the upside and downside risks to the attainment

of both sustainable growth and price stability should be kept roughly equal. With underlying inflation expected to be contained, the Committee believes that policy accommodation can be removed at a pace that is likely to be measured. Nonetheless, the Committee will respond to changes in economic prospects as needed to fulfill its obligation to maintain price stability.”

By order of the Federal Open Market Committee, January 5, 2006.

Vincent R. Reinhart,

Secretary, Federal Open Market Committee.

or other forms of information technology. Written comments should be received within 60 days of this notice.

Proposed Project

National Hospital Ambulatory Medical Care Survey (NHAMCS) 2007–2008 [OMB No. 0920–0278]—Extension—National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The National Hospital Ambulatory Medical Care Survey (NHAMCS) has been conducted annually since 1992. The purpose of NHAMCS is to meet the needs and demands for statistical information about the provision of ambulatory medical care services in the United States. Ambulatory services are rendered in a wide variety of settings, including physicians' offices and hospital outpatient and emergency departments. The target universe of the NHAMCS is in-person visits made to outpatient departments (OPDs) and emergency departments (EDs) of non-Federal, short-stay hospitals (hospitals with an average length of stay of less than 30 days) or those whose specialty is general (medical or surgical) or children's general.

NHAMCS was initiated to complement the National Ambulatory Medical Care Survey (NAMCS, OMB No. 0920–0234) which provides similar data concerning patient visits to physicians' offices. NAMCS and NHAMCS are the principal sources of data on approximately 90 percent of ambulatory care provided in the United States.

NHAMCS provides a range of baseline data on the characteristics of the users and providers of ambulatory medical care. Data collected include patients' demographic characteristics, reason(s) for visit, physicians' diagnosis(es), diagnostic services, medications, and disposition. These data, together with trend data, may be used to monitor the effects of change in the health care system, for the planning of health services, improving medical education, determining health care work force needs, and assessing the health status of the population. In addition, a Cervical Cancer Screening Supplement (CCSS) will be added to collect information on cervical cancer screening practices from hospital OPD clinics. It will allow the CDC/National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP) to evaluate cervical cancer screening methods and the use of HPV tests.
