

The burden estimate for the electronic reporting of adverse events is based on the number of facilities currently participating in MedSun (400) and the number of sites (50) expected to be added to the program over the next 3 years. The current average number of reports per site is 7 reports annually. For purposes of this renewed data collection, we are estimating an average of 15 reports per site annually. This increase is expected since MedSun is working to promote reporting in general from the sites, as well as promoting reporting from specific parts of the hospitals, such as the pediatric intensive care units, electrophysiology laboratories, and the hospital laboratories.

Therefore, this yields a total annual responses of 6,000 (400 facilities x 15 data entries = 6,000.) The participating MedSun reporters tell FDA that it typically takes 20 to 45 minutes to fill out the online form. Using the high end of that timeframe, the overall annual burden hours will be 4,500 hours (6,000 report entries x 0.75 hours = 4,500 hours).

Determining burden for the DS-X portion of MedSun: Not all sites use this part of the software. To determine the total annual responses for DS-X: 200 participants multiplied by the number of times each will access DS-X yields annual responses of 1,000 reports.

It typically takes an average of 30 minutes to enter data into DS-X, given that there are various types of data entries which are possible, some of which are lengthier than others. The number of burden hours for DS-X is determined by multiplying the expected 1,000 times the site will be accessed by the average amount of time it takes to make a DS-X data entry (30 minutes). This equals a burden of 500 hours (1,000 x 0.50 = 500).

The total burden hours for MedSun and DS-X data entry equals 8,000 hours (7,500 for MedSun and 500 for DS-X).

Dated: June 7, 2007.

Jeffrey Shuren,

Assistant Commissioner for Policy.
