The applicant requests authorization to conduct research off the northwest coast of Florida for 5 years. Researchers would capture up to 40 loggerhead, 600 green, and 110 Kemp's ridley sea turtles using

strike-net, set-net, or hand capture techniques. Animals would be weighed, measured, photographed, skin biopsied, flipper and Passive Integrated Transponder tagged, and released.

SUPPLEMENTARY INFORMATION: On October 10, 2007, notice was published in the **Federal Register** (72 FR 57524) that an amendment of Permit No. 782-1702 had been requested by the above-named organization. The amended permit adds authorization to conduct additional activities on up to 20 adult harbor seals (*Phoca vitulina*) annually in Washington and Oregon. These seals, excluding pregnant or lactating females, would receive gas anesthesia following capture, have stomach temperature transmitters inserted via stomach intubation, and have an external data logger attached externally. The purpose of the additional protocols is to augment current studies on harbor seal diet and abundance.
