## **NUCLEAR REGULATORY COMMISSION**

### **Draft Regulatory Guide: Issuance, Availability**

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** Issuance, Availability of Draft Regulatory Guide (DG)-3032.

**FOR FURTHER INFORMATION CONTACT:** B. Von Till, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, telephone: (301) 415-0598 or e-mail [RWV@nrc.gov](mailto:RWV@nrc.gov).

### **SUPPLEMENTARY INFORMATION:**

#### **I. Introduction**

The U.S. Nuclear Regulatory Commission (NRC) has issued for public comment a draft regulatory guide in the agency's "Regulatory Guide" series. This series was developed to describe and make available to the public such information as methods that are acceptable to the NRC staff for implementing specific parts of the NRC's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

The draft regulatory guide (DG), entitled, "Design, Construction, and Inspection of Embankment Retention Systems at Uranium Recovery Facilities," is temporarily identified by its task number, DG-3032, which should be mentioned in all related correspondence.

This draft guide updates and combines the guidance currently found in Revision 2 of Regulatory Guide 3.11, "Design, Construction, and Inspection of Embankment Retention Systems for Uranium Mills," and Revision 1 of Regulatory Guide 3.11.1, "Operational Inspection and Surveillance of Embankment Retention Systems for Uranium Mill Tailings."

The mining and milling of uranium ores generates large volumes of liquid and solid wastes (tailings). These tailings are usually stored behind manmade retaining structures much like other commercial mining and milling operations. In addition, other liquid wastes from operations and ground-water corrective action activities at uranium recovery facilities are often retained behind evaporation pond embankments. This draft guide describes engineering practices and methods generally considered by the NRC to be satisfactory for the design, construction, and inspection of the embankment retention systems used for retaining liquid and solid wastes from uranium recovery operations. These practices and methods are the result of NRC review and action on a number of specific cases, and they reflect the latest engineering approaches acceptable to the NRC staff. If future information results in alternative methods, the NRC staff will review such methods to determine their acceptability.

The NRC staff is of the opinion that the latest advances in geotechnical
