

framework to inform its assessment of whether permit requirements are appropriate and reasonable, EPA will also continue to ensure that all permits satisfy the requirements of the Clean Water Act. Accordingly, EPA has committed to operating in accordance with the RFA's framework and requirements during the Agency's issuance of CWA general permits (in other words, the Agency has committed that it will apply the RFA in its issuance of general permits as if those permits do qualify as "rules" that are subject to the RFA).

EPA anticipates that for most general permits the Agency will be able to conclude that there is not a significant economic impact on a substantial number of small entities. In such cases, the requirements of the RFA framework are fulfilled by including a statement to this effect in the permit fact sheet, along with a statement providing the factual basis for the conclusion. A quantitative analysis of impacts would only be required for permits that may affect a substantial number of small entities, consistent with EPA guidance regarding RFA certification.¹

Consistent with the above discussion, EPA has concluded that the proposed issuance of the 2008 DGP would not affect a substantial number of small entities. An estimated 36 construction projects per year were authorized under the 2002 General Permits, a substantial number of which were not operated by small entities. The 2008 DGP includes expanded coverage for additional types of discharges; however, these discharges are temporary in nature. At any one time, fewer than 100 small entities are expected to be discharging and incurring costs. In addition, requirements in the draft 2008 DGP remain substantially similar to those in the 2002 General Permit, except for the addition of total residual chlorine (TRC) limits for discharges from municipal sources. Therefore, EPA has concluded that the proposed issuance of the 2008 DGP is unlikely to have an adverse economic impact on small entities.

SUPPLEMENTARY INFORMATION: EPA is submitting the draft reports for independent, external scientific and technical peer review. The draft reports provide the documentation and scientific evaluation of the environmental effectiveness of the draft AACM protocol as a possible alternative technology in controlling multimedia asbestos emissions during demolition of asbestos-containing buildings, as required by the existing Asbestos National Emission Standard for Hazardous Air Pollutants (NESHAP). The draft AACM demolition protocol was used on two separate buildings. One building contained NESHAP-regulated quantities of asbestos-containing transite siding and the second building contained NESHAP-regulated quantities of asbestos-containing popcorn ceiling and wall surfacing material. In addition to assessing the environmental effectiveness of the draft AACM

technology, these two draft reports assess the costs and time requirements of the application of the AACM protocol in these situations, as well as document lessons learned in each instance.

Public comments received in the docket will be shared with the external peer review panel for their consideration. Although EPA is under no obligation to do so, EPA may consider comments received after the close of the comment period. The public release of this draft document is solely for the purpose of seeking public comment and peer review, and does not represent and should not be construed to represent any EPA policy, viewpoint, or determination.
