4. *Official List of Section 13(f) Securities.* The Official List of Section 13(f) Securities published by the Commission (the “13F List”) lists the securities the holdings of which a Manager is to report on Form 13F. See rule 13f–1(c) [17 CFR 240.13f–1(c)]. Form SH filers may rely on the current 13F List in determining whether they need to report on Form SH information about any particular equity security, excluding short positions for options that are on the 13F List. The 13F List is available on the SEC’s Web site, at <http://www.sec.gov/divisions/investment/13flists.htm>. Paper copies are available at a reasonable fee from the Securities and Exchange Commission, Public Reference Room, 100 F Street, NE., Washington, DC 20549–1520.

Paperwork Reduction Act Information

The Office of Management and Budget has approved this collection of information pursuant to 44 U.S.C. 3507 and 5 CFR 1320.13. The OMB control number for this collection of information is 3235–0646. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid control number. We estimate that providing the requested information will take, on average, approximately 20 hours. Any member of the public may direct to the Commission any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden. Filings with the form types set forth in this instruction will be filed on a nonpublic basis.

RIN 3235–AJ57

Amendments to Regulation SHO

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: The Securities and Exchange Commission (“Commission”) is adopting amendments to Regulation SHO under the Securities Exchange Act of 1934 (“Exchange Act”). The amendments are intended to further reduce the number of persistent fails to deliver in certain equity securities by eliminating the options market maker exception to the close-out requirement of Regulation SHO. As a result of the amendments, fails to deliver in threshold securities that result from hedging activities by options market makers will no longer be excepted from Regulation SHO’s close-out requirement. The Commission is also providing guidance regarding bona fide market making activities for purposes of the market maker exception to Regulation SHO’s locate requirement.

DATES: *Effective Date:* October 17, 2008.

FOR FURTHER INFORMATION CONTACT: James A. Brigagliano, Associate Director, Josephine J. Tao, Assistant Director, Victoria L. Crane, Branch Chief, Joan M. Collopy, Special Counsel, Christina M. Adams and Matthew Sparkes, Staff Attorneys, Office of Trading Practices and Processing, Division of Trading and Markets, at (202) 551–5720, at the Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–6628.

SUPPLEMENTARY INFORMATION: The Commission is amending Rule 203 of Regulation SHO [17 CFR 242.203] under the Exchange Act.

I. Introduction

To further Regulation SHO’s goal of reducing fails to deliver in equity

securities, the Commission is adopting its proposal¹ to eliminate the options market maker exception to the close-out requirement of Regulation SHO.² As discussed in detail below, we believe that eliminating the exception, and thereby imposing additional delivery requirements on securities with a substantial amount of fails to deliver, will help to protect and enhance the operation, integrity, and stability of the markets, as well as reduce potential short selling abuses.

II. Background

A. Regulation SHO

Regulation SHO, which became fully effective on January 3, 2005, sets forth the regulatory framework governing short sales.³ Among other things, Regulation SHO imposes a close-out requirement to address failures to deliver stock on trade settlement date⁴ and to target potentially abusive “naked” short selling⁵ in certain equity

securities.⁶ While the majority of trades settle on time,⁷ Regulation SHO is intended to address those situations where the level of fails to deliver for the particular stock is so substantial that it might impact the market for that security.⁸

Although high fails levels exist only for a small percentage of issuers,⁹ we believe that all sellers of securities should promptly deliver, or arrange for delivery of, securities to the respective buyer, and that all buyers of securities have a right to expect prompt delivery of securities purchased. In addition, as we have stated on several prior occasions, we are concerned about the negative effect that fails to deliver may have on the markets and shareholders.¹⁰

15376 (March 21, 2008) (“Naked Short Selling Anti-Fraud Rule Proposing Release”).

⁶ In 2003, the Commission settled a case against certain parties relating to allegations of manipulative short selling in the stock of Sedona Corporation. The Commission alleged that the defendants profited from engaging in massive “naked” short selling that flooded the market with Sedona stock, and depressed its price. See *Rhino Advisors, Inc. and Thomas Badian*, Lit. Rel. No. 18003 (Feb. 27, 2003); see also, *SEC v. Rhino Advisors, Inc. and Thomas Badian*, Civ. Action No. 03 civ 1310 (RO) (S.D.N.Y.); see also, Securities Exchange Act Release No. 48709 (Oct. 28, 2003), 68 FR 62972, 62975 (Nov. 6, 2003) (“2003 Regulation SHO Proposing Release”) (describing the alleged activity in the case involving stock of Sedona Corporation); 2004 Regulation SHO Adopting Release, 69 FR at 48016, n.76.

⁷ According to the National Securities Clearing Corporation (“NSCC”), 99% (by dollar value) of all trades settle on time. Thus, on an average day, approximately 1% (by dollar value) of all trades, including equity, debt, and municipal securities fail to settle. The vast majority of these fails are closed out within five days after T+3.

⁸ These fails to deliver may arise from either short or long sales of securities. There may be legitimate reasons for a fail to deliver. For example, human or mechanical errors or processing delays can result from transferring securities in custodial or other form rather than book-entry form, thereby causing a fail to deliver on a long sale within the normal three-day settlement period. In addition, broker-dealers that make markets in a security (“market makers”) and who sell short thinly-traded, illiquid stock in response to customer demand may encounter difficulty in obtaining securities when the time for delivery arrives. The Commission’s Office of Economic Analysis (“OEA”) estimates that, on an average day between May 1, 2007 and July 31, 2008 (*i.e.*, the time period that includes all full months after the Commission started receiving price data from NSCC), trades in “threshold securities,” as defined in Rule 203(b)(6) of Regulation SHO, that fail to settle within T+3 account for approximately 0.3% of dollar value of trading in all equity securities.

⁹ The average daily number of securities on a threshold list (as defined *infra* note 22) in July 2008 was approximately 523 securities, which comprised 0.6% of all equity securities, including those that are not covered by Regulation SHO. Regulation SHO’s close-out requirement applies to any equity security of an issuer that is registered under Section 12 of the Exchange Act, or that is required to file reports pursuant to Section 15(d) of the Exchange Act.

¹⁰ See 2007 Regulation SHO Final Amendments, 72 FR at 45544; 2006 Regulation SHO Proposed

For example, fails to deliver may deprive shareholders of the benefits of ownership, such as voting and lending.¹¹ In addition, where a seller of securities fails to deliver securities on settlement date, in effect the seller unilaterally converts a securities contract (which is expected to settle within the standard three-day settlement period) into an undated futures-type contract, to which the buyer might not have agreed, or that might have been priced differently.¹²

Moreover, sellers that fail to deliver securities on settlement date may enjoy fewer restrictions than if they were required to deliver the securities in a timely manner, and such sellers may attempt to use this additional freedom to engage in trading activities that are designed to improperly depress the price of a security.¹³ In addition, by not borrowing securities and, therefore, not making delivery within the standard three-day settlement period, the seller avoids the costs of borrowing.

In addition, issuers and investors have repeatedly expressed concerns about fails to deliver in connection with manipulative “naked” short selling. For example, in response to proposed amendments to Regulation SHO in 2006¹⁴ designed to further reduce the number of persistent fails to deliver in certain equity securities by eliminating Regulation SHO’s “grandfather” provision, and limiting the duration of the rule’s options market maker exception, the Commission received a number of comments that expressed concerns about “naked” short selling and extended delivery failures.¹⁵ Commenters continued to express these concerns in response to the Reproposal.¹⁶

¹ See Exchange Act Release No. 56213 (Aug. 7, 2007), 72 FR 45558 (Aug. 14, 2007) (“Reproposal”); see also Exchange Act Release No. 54154 (July 14, 2006), 71 FR 41710 (July 21, 2006) (“2006 Regulation SHO Proposed Amendments”); Exchange Act Release No. 58107 (July 7, 2008), 73 FR 40201 (July 14, 2008) (“2008 Regulation SHO Re-Opening Release”).

² 17 CFR 242.200; see also Securities Exchange Act Release No. 50103 (July 28, 2004), 69 FR 48008 (Aug. 6, 2004) (“2004 Regulation SHO Adopting Release”).

³ Rule 200(a) of Regulation SHO defines a short sale as “any sale of a security which the seller does not own or any sale which is consummated by the delivery of a security borrowed by, or for the account of, the seller.” 17 CFR 242.200(a).

⁴ Generally, investors complete or settle their security transactions within three business days. This settlement cycle is known as T+3 (or “trade date plus three days”). T+3 means that when a trade occurs, the participants to the trade deliver and pay for the security at a clearing agency three business days after the trade is executed. The three-day settlement period applies to most security transactions, including stocks, bonds, municipal securities, mutual funds traded through a brokerage firm, and limited partnership interests that trade on an exchange. Government securities and stock options settle on the next business day following the trade. In addition, Rule 15c6–1 prohibits broker-dealers from effecting or entering into a contract for the purchase or sale of a security that provides for payment of funds and delivery of securities later than the third business day after the date of the contract unless otherwise expressly agreed to by the parties at the time of the transaction. 17 CFR 240.15c6–1; Exchange Act Release No. 33023 (Oct. 7, 1993), 58 FR 52891 (Oct. 13, 1993). However, failure to deliver securities on T+3 does not violate Rule 15c6–1.

⁵ We have previously noted that abusive “naked” short selling, while not defined in the federal securities laws generally refers to selling short without having stock available for delivery and intentionally failing to deliver stock within the standard three day settlement cycle. See 2004 Regulation SHO Adopting Release, 69 FR at 48009, n.10; Exchange Act Release No. 56212 (Aug. 7, 2007), 72 FR at 45544, n.3 (Aug. 14, 2007) (“2007 Regulation SHO Final Amendments”); Exchange Act Release No. 57511 (March 17, 2008), 73 FR

To the extent that fails to deliver might be part of manipulative “naked” short selling, which could be used as a tool to drive down a company’s stock price,¹⁷ such fails to deliver may undermine the confidence of investors.¹⁸ These investors, in turn, may be reluctant to commit capital to an issuer they believe to be subject to such manipulative conduct.¹⁹ In addition, issuers may believe that they have suffered unwarranted reputational damage due to investors’ negative perceptions regarding fails to deliver in the issuer’s security.²⁰ Unwarranted

Director, National Coalition Against Naked Shorting, dated Sept. 11, 2007 (“NCANS”).

¹⁷ See *supra*, note 6 (discussing a case in which we alleged that the defendants profited from engaging in massive “naked” short selling that flooded the market with the company’s stock, and depressed its price); see also *S.E.C. v. Gardiner*, 48 S.E.C. Docket 811, No. 91 Civ. 2091 (S.D.N.Y. March 27, 1991) (alleged manipulation by sales representative by directing or inducing customers to sell stock short in order to depress its price); *U.S. v. Russo*, 74 F.3d 1383, 1392 (2d Cir. 1996) (short sales were sufficiently connected to the manipulation scheme as to constitute a violation of Exchange Act Section 10(b) and Rule 10b–5).

¹⁸ In response to the Reproposal, we received comment letters discussing the impact of fails to deliver on investor confidence. See, e.g., letter from NCANS. Commenters expressed similar concerns in response to the 2006 Regulation SHO Proposed Amendments. See, e.g., letter from Mary Helburn, Executive Director, National Coalition Against Naked Shorting, dated Sept. 30, 2006 (“NCANS 2006”); letter from Richard Blumenthal, Attorney General, State of Connecticut, dated Sept. 19, 2006 (“Blumenthal”).

¹⁹ In response to the Reproposal, we received comment letters expressing concern about the impact of potential “naked” short selling on capital formation, claiming that “naked” short selling causes a drop in an issuer’s stock price and may limit the issuer’s ability to access the capital markets. See, e.g., letter from Robert K. Lifton, Chairman and CEO, Medis Technologies, Inc., dated Sept. 12, 2007 (“Medis”); letter from NCANS. Commenters expressed similar concerns in response to the 2006 Regulation SHO Proposed Amendments. See, e.g., letter from Congressman Tom Feeney—Florida, U.S. House of Representatives, dated Sept. 25, 2006 (“Feeney”); see also letter from Zix Corporation, dated Sept. 19, 2006 (“Zix”) (stating that “[m]any investors attribute the Company’s frequent re-appearances on the Regulation SHO list to manipulative short selling and frequently demand that the Company “do something” about the perceived manipulative short selling. This perception that manipulative short selling of the Company’s securities is continually occurring has undermined the confidence of many of the Company’s investors in the integrity of the market for the Company’s securities.”).

²⁰ Due in part to such concerns, some issuers have taken actions to attempt to make transfer of their securities “custody only,” thus preventing transfer of their stock to or from securities intermediaries such as the Depository Trust Company (“DTC”) or broker-dealers. See Exchange Act Release No. 48709 (Oct. 28, 2003), 68 FR 62972, at 62975 (Nov. 6, 2003). Some issuers have attempted to withdraw their issued securities on deposit at DTC, which makes the securities ineligible for book-entry transfer at a securities depository. See *id.* Withdrawing securities from DTC or requiring custody-only transfers would undermine the goal of

reputational damage caused by fails to deliver might have an adverse impact on the security’s price.²¹

B. Amendments to Regulation SHO’s Close-Out Requirement

Regulation SHO’s close-out requirement, which is contained in Rule 203(b)(3) of Regulation SHO, applies only to securities in which a substantial amount of fails to deliver have occurred (also known as “threshold securities”).²² Specifically, the close-out requirement requires a participant of a clearing agency registered with the Commission²³ to take immediate action

a national clearance and settlement system that is designed to reduce the physical movement of certificates in the trading markets. See *id.* We note, however, that in 2003 the Commission approved a DTC rule change clarifying that its rules provide that only its participants may withdraw securities from their accounts at DTC, and establishing a procedure to process issuer withdrawal requests. See Securities Exchange Act Release No. 47978 (June 4, 2003), 68 FR 35037 (June 11, 2003).

²¹ See 2006 Regulation SHO Proposed Amendments, 71 FR at 41712; 2007 Regulation SHO Final Amendments, 72 FR at 45544; Reproposal, 72 FR at 45558–45559; “Naked” Short Selling Anti-Fraud Rule Proposing Release, 73 FR at 15378 (providing additional discussion of the impact of fails to deliver on the market); see also 2003 Regulation SHO Proposing Release, 68 FR at 62975 (discussing the impact of “naked” short selling on the market).

²² A threshold security is defined in Rule 203(c)(6) as any equity security of an issuer that is registered pursuant to section 12 of the Exchange Act (15 U.S.C. 78l) or for which the issuer is required to file reports pursuant to section 15(d) of the Exchange Act (15 U.S.C. 78o(d)): (i) For which there is an aggregate fail to deliver position for five consecutive settlement days at a registered clearing agency of 10,000 shares or more, and that is equal to at least 0.5% of the issue’s total shares outstanding; and (ii) that is included on a list (“threshold securities list”) disseminated to its members by a self-regulatory organization (“SRO”). See 17 CFR 242.203(c)(6). Currently, each SRO provides the threshold securities list for those securities for which the SRO is the primary market.

²³ For purposes of Regulation SHO, the term “participant” has the same meaning as in section 3(a)(24) of the Exchange Act. See 15 U.S.C. 78c(a)(24). The term “registered clearing agency” means a clearing agency, as defined in section 3(a)(23) of the Exchange Act, that is registered as such pursuant to section 17A of the Exchange Act. See 15 U.S.C. 78c(a)(23)(A), 78q–1 and 15 U.S.C. 78q–1(b), respectively. See also 2004 Regulation SHO Adopting Release, 69 FR at 48031. As of July 31, 2008 approximately 91% of participants of the NSCC, the primary registered clearing agency responsible for clearing U.S. transactions, were registered as broker-dealers. Those participants not registered as broker-dealers include such entities as banks, U.S.-registered exchanges, and clearing agencies. Although these entities are participants of a registered clearing agency, generally these entities do not engage in the types of activities that would implicate the close-out requirements of Regulation SHO. Such activities of these entities include creating and redeeming Exchange Traded Funds, trading in municipal securities, and using NSCC’s Envelope Settlement Service or Inter-city Envelope Settlement Service. These activities rarely lead to fails to deliver and, if fails to deliver do occur, they are small in number and are usually closed out within a day. Thus, such fails to deliver would not trigger the close-out provisions of Regulation SHO.

to close out a fail to deliver position in a threshold security in the Continuous Net Settlement (“CNS”) ²⁴ system that has persisted for 13 consecutive settlement days by purchasing securities of like kind and quantity.²⁵ In addition, if the failure to deliver has persisted for 13 consecutive settlement days, Rule 203(b)(3)(iv) prohibits the participant, and any broker-dealer for which it clears transactions, including market makers, from accepting any short sale orders or effecting further short sales in the particular threshold security without borrowing, or entering into a bona-fide arrangement to borrow, the security until the participant closes out the fail to deliver position by purchasing securities of like kind and quantity.²⁶

As adopted in August 2004, Rule 203(b)(3) of Regulation SHO included two exceptions to the mandatory close-out requirement. The first was the “grandfather” provision, which excepted fails to deliver established prior to a security becoming a threshold security.²⁷ The second was the “options

²⁴ The majority of equity trades in the United States are cleared and settled through systems administered by clearing agencies registered with the Commission. The NSCC clears and settles the majority of equity securities trades conducted on the exchanges and over the counter. NSCC clears and settles trades through the CNS system, which nets the securities delivery and payment obligations of all of its members. NSCC notifies its members of their securities delivery and payment obligations daily. In addition, NSCC guarantees the completion of all transactions and interposes itself as the counterparty to both sides of the transaction. While NSCC’s rules do not authorize it to require member firms to close out or otherwise resolve fails to deliver, NSCC reports to the SROs those securities with fails to deliver of 10,000 shares or more. The SROs use NSCC fails data to determine which securities are threshold securities for purposes of Regulation SHO.

²⁵ 17 CFR 242.203(b)(3).

²⁶ *Id.* at (b)(3)(iv). It is possible under Regulation SHO that a close out by a participant of a registered clearing agency may result in a fail to deliver position at another participant if the counterparty from which the participant purchases securities fails to deliver. However, Regulation SHO prohibits a participant of a registered clearing agency, or a broker-dealer for which it clears transactions, from engaging in “sham close outs” by entering into an arrangement with a counterparty to purchase securities for purposes of closing out a fail to deliver position and the purchaser knows or has reason to know that the counterparty will not deliver the securities, and which thus creates another fail to deliver position. See *id.* at (b)(3)(vii); 2004 Regulation SHO Adopting Release, 69 FR at 48018 n.96. In addition, we note that borrowing securities, or otherwise entering into an arrangement with another person to create the appearance of a purchase would not satisfy the close-out requirement of Regulation SHO. For example, the purchase of paired positions of stock and options that are designed to create the appearance of a bona fide purchase of securities but that are nothing more than a temporary stock lending arrangement would not satisfy Regulation SHO’s close-out requirement.

²⁷ See 2004 Regulation SHO Adopting Release, 69 FR at 48031. The “grandfathered” status applied in

market maker exception," which excepted any fail to deliver in a threshold security resulting from short sales effected by a registered options market maker to establish or maintain a hedge on options positions that were created before the underlying security became a threshold security.²⁸

At the time of Regulation SHO's adoption, the Commission stated that it would monitor the operation of Regulation SHO to determine whether grandfathered fail to deliver positions were being cleared up under the existing delivery and settlement guidelines or whether any further regulatory action with respect to the close out provisions of Regulation SHO was warranted.²⁹ In addition, with respect to the options market maker exception, the Commission noted that it would take into consideration any indications that this provision was operating significantly differently from the Commission's original expectations.³⁰

Based, in part, on the results of examinations conducted by the Commission's staff and the SROs since Regulation SHO's adoption, as well as the persistence of certain securities on threshold securities lists, on July 14, 2006, the Commission proposed amendments to Regulation SHO,³¹ which were intended to reduce the number of persistent fails to deliver in certain equity securities by eliminating the "grandfather" provision and narrowing the options market maker exception contained in that rule. In addition, in March 2007, the Commission re-opened the comment period to the 2006 Regulation SHO Proposed Amendments for thirty days to provide the public with an opportunity to comment on a summary of the National Association of Securities Dealers, Inc.'s ("NASD's") (n/k/a Financial Industry Regulatory Authority, Inc.) analysis that the NASD had submitted to the public file on March 12, 2007. In addition, the notice regarding the re-opening of the comment period directed the public's attention to summaries of data collected by the Commission's Office of Compliance Inspections and

Examinations and the New York Stock Exchange LLC ("NYSE").³²

On June 13, 2007, we approved the adoption of the amendment, as proposed, to eliminate the "grandfather" provision of Regulation SHO.³³ With respect to the options market maker exception, however, in response to comments to the 2006 Regulation SHO Proposed Amendments, we re-proposed amendments to eliminate the exception.³⁴ In addition, the Commission sought comment on two alternative proposals that would require options market maker fails to deliver to be closed out within specific time-frames.³⁵ The Reproposal also included an amendment to Regulation SHO that would require brokers-dealers marking a sale as "long" to document the present location of the securities being sold.

We received over 1,000 comment letters in response to the Reproposal.³⁶ Some commenters urged the Commission to obtain empirical data to demonstrate the relationship between fails to deliver and the options market maker exception before determining whether additional rulemaking was necessary.³⁷ In particular, commenters urged the Commission to obtain data relating to the impact of the elimination of the "grandfather" provision and connecting fails to deliver to the options market maker exception.³⁸ In response, the Commission staff obtained data from SROs, options market makers, and clearing agency participants that shows extensive use of the options market maker exception to Regulation SHO's close-out requirement and the resulting fails to deliver that were not closed out during 2006, 2007, and 2008. In addition, OEA provided data which indicates that since the elimination of the "grandfather" provision, fails to deliver in threshold securities with options traded on them ("optionable threshold securities") have increased significantly. The Commission made this data available to the public for

review and comment by including it in a Commission release and re-opening the comment period to the Reproposal on July 7, 2008.³⁹ The comment period ended on August 13, 2008.

As discussed below, after considering the comments received, the data, and the purposes underlying Regulation SHO, we are adopting amendments to eliminate the options market maker exception, as proposed.⁴⁰ At this time, we are not acting on the proposed amendments to Rule 200(g) of Regulation SHO regarding long sale documentation. Instead, in a companion release we have adopted a "naked" short selling anti-fraud rule that, in part, targets sellers' representations regarding long sales.⁴¹ In addition, we note that we have adopted an interim final temporary rule, Rule 204T, which strengthens the delivery requirements for sales of all equity securities.⁴² Under temporary Rule 204T, fail to deliver positions resulting from short sales of all equity securities by options market makers must be closed out by no later than the beginning of regular trading hours on the settlement day after the fail to deliver position occurs.⁴³ In conjunction with these short sale-related initiatives, and our goal of further reducing fails to deliver and

³⁹ See 2008 Regulation SHO Re-Opening Release, 73 FR 40201.

⁴⁰ On September 17, 2008, we issued an emergency order pursuant to Section 12(k)(2) of the Exchange Act in which we adopted and made immediately effective the elimination of the options market maker exception to Regulation SHO's close-out requirement. See Exchange Act Release No. 58572 (Sept. 17, 2008) (the "September Emergency Order"). The September Emergency Order expires on October 17, 2008. This release makes permanent the amendments to Rule 203(b)(3) of Regulation SHO contained in the September Emergency Order.

⁴¹ See Exchange Act Release No. 58774 (Oct. 14, 2008); see also, September Emergency Order, *supra* note 40 (adopting and making immediately effective Rule 10b-21, a "naked" short selling anti-fraud rule).

⁴² See Exchange Act Release No. 58773 (Oct. 14, 2008) ("Interim Final Temporary Rule"); see also, September Emergency Order, *supra* note 40 (adding to Regulation SHO, and making immediately effective, temporary Rule 204T, imposing enhanced delivery requirements for sales of all equity securities).

⁴³ See *id.* The Interim Final Temporary Rule includes a limited exception from its delivery requirements for registered market makers, options market makers, or other market makers obligated to quote in the over-the-counter market. Specifically, temporary Rule 204T(a)(3) provides that if a participant of a registered clearing agency has a fail to deliver position at a registered clearing agency in any equity security that is attributable to bona fide market making activities by a registered market maker, options market maker, or other market maker obligated to quote in the over-the-counter market, the participant shall, by no later than the beginning of regular trading hours on the third consecutive settlement day following the settlement date, immediately close out the fail to deliver position by purchasing securities of like kind and quantity.

two situations: (i) To fail to deliver positions occurring before January 3, 2005, Regulation SHO's effective date; and (ii) to fail to deliver positions that were established on or after January 3, 2005 but prior to the security appearing on a threshold securities list.

addressing potentially abusive “naked” short selling, we believe that we must eliminate Regulation SHO’s options market maker exception.

III. Options Market Maker Exception

A. Discussion of Comments to the Reproposal and 2008 Regulation SHO Re-Opening Release

The Commission received comment letters from numerous entities, including issuers, individual retail investors, options market makers, SROs, elected officials, and academics.⁴⁴ Although the comment letters are publicly available to be read in their entirety, we highlight below some of the main issues, concerns, and suggestions raised in the letters.

Several commenters supported the proposal to eliminate the options market maker exception. One commenter stated that it believes that the current options market maker exception “harms investors and issuers, hinders the formation of capital, and is fatally flawed as written” and that it should be eliminated.⁴⁵ Another commenter stated that the options market maker exception “is a well known tool of manipulators and must be removed to ensure a level playing field for public companies and their shareholders.”⁴⁶ One commenter that supported the amendments noted that “options market makers should factor the cost of borrowing stock and selling short into the price of the put

options being sold.”⁴⁷ Commenters also stated that 13 consecutive settlement days was more than sufficient to close out a fail to deliver relating to an options position.⁴⁸

Commenters who opposed the proposed amendments generally criticized the impact of elimination on options market making risk, quote depths, spread widths, and market liquidity in threshold securities and securities that might become threshold securities. Among other things, they stated that the options market maker exception is integral to the options market maker’s ability to make markets and manage risk and that, without the exception, making continuous markets would be very difficult, particularly in longer-dated options.⁴⁹ One commenter suggested that “withdrawing or greatly reducing the exception would cause varying losses of liquidity in over 20% of listed options and their underlying stocks.”⁵⁰ Another commenter stated that “[i]f the exception is eliminated or narrowed in the manner proposed, [it] anticipates [options market makers] would be reluctant or even unable to effectively make markets on securities if they cannot be certain of their ability to establish and maintain an effective hedge and manage their risk through selling stock.”⁵¹ Another commented that “[t]he uncertainty, time, processing and expense necessary to pre-borrow when effecting a short sale, as well as the uncertainty and expense caused by a close out of a hedge, will by its nature adversely affect the [options market makers’] pricing of the option.”⁵²

Some commenters who opposed elimination of the exception argued that options market makers, unlike equity market makers, should have an exception to Regulation SHO’s close-out requirement because there are distinct differences between options market making and market making in the underlying stock. For example, one commenter stated that the risk to an options market maker of trading options on a threshold security is higher than that of a stock specialist because in the equity markets there is often a natural flow of buyers and sellers to trade against each other without the stock specialist having to take a position.⁵³ According to the commenter, options market makers routinely have to take

the other side of customer trades in the options transaction and must hedge the residual risk. This commenter also noted that when an options market maker must close out a fail to deliver position, it may have to worry about the risk and exposure for the options positions that were previously offset by the stock position.

Other commenters stated that equity market makers “can freely hedge an equity position in a threshold security with a short options position, but, if the options market maker exception is eliminated, options market makers would face restrictions in their ability to hedge options positions with the underlying equity.”⁵⁴ These commenters stated that the ability to keep open a fail to deliver position is particularly important with longer-term options positions where the options market maker must maintain the hedge for extended periods of time.⁵⁵ In such circumstances, these commenters stated that often the only available and/or economically feasible hedge is the underlying security.

Some commenters also stated that the one-time 35 consecutive settlement day phase-in period was “particularly troubling because it would not be sufficient to account for pre-existing options positions that were assumed in reliance on the [options market maker exception].”⁵⁶ In particular, these commenters expressed concerns about increased costs and risks associated with having to close out previously-exempted fails to deliver relating to the hedging of longer-term options positions, such as Long-term Equity Anticipation Securities (“LEAPS”),⁵⁷ that were not anticipated at the time the options positions were originally taken.⁵⁸

Some commenters also opposed the proposed alternatives. For example, one commenter stated that the “35-day window afforded options market makers to fail would simply create opportunities for sophisticated market participants to employ complex derivative strategies to roll failed positions from one period to the next.”⁵⁹ Other commenters preferred the proposed 35 day close out

alternative to elimination of the options market maker exception.⁶⁰ Some commenters, however, requested that the Commission extend the proposed alternative 35 day close-out requirement to 42 days⁶¹ or even 45 days,⁶² to allow for 2 options expirations before a fail to deliver position must be closed out.

We also received a number of comment letters in response to the 2008 Regulation SHO Re-Opening Release, most of which urged the Commission to take action on the proposed amendments to eliminate the options market maker exception.⁶³ In contrast, one commenter noted that it does not believe that there is evidence of a significant problem with extended fails to deliver or, if such a problem exists, evidence that it is attributable to the options market maker exception.⁶⁴ In addition, this commenter stated that it believes "[t]he perceived benefits of modifying the exception * * * would not outweigh the costs associated and burden placed on OMMs and options market they support."⁶⁵

As discussed in detail below, although we recognize commenters' concerns that elimination of the options market maker exception may place costs and burdens on options market makers, we believe that such potential effects are justified by the benefits that are expected to result from requiring that all fails to deliver in threshold securities be closed out within specific time-frames rather than being allowed to continue indefinitely.

B. Discussion of Amendments

After careful consideration of the comments, we are adopting amendments to eliminate the options market maker exception to Regulation SHO's close-out requirement. Specifically, as a result of the amendments, all fails to deliver in a threshold security resulting from short sales by a registered options market maker effected to establish or maintain a hedge on options positions established before the security became a threshold security will, like all other fails to deliver in threshold securities, have to be closed out in accordance with the

close-out requirements of Regulation SHO.⁶⁶

The amendments include a one-time 35 consecutive settlement day phase-in period, as proposed.⁶⁷ Under this provision of the amendments, any previously excepted fail to deliver position in a threshold security on the effective date of the amendments, including any adjustments to that fail to deliver position, must be closed out within 35 consecutive settlement days of the effective date of the amendments.⁶⁸ We chose 35 settlement days because 35 days was used in Regulation SHO as adopted in August 2004, and in Regulation SHO, as amended.⁶⁹

In the September Emergency Order, we adopted and made immediately effective the elimination of the options market maker exception to Regulation SHO's close-out requirement.⁷⁰ Thus, if there was a fail to deliver position at a registered clearing agency in a security that was a threshold security on the effective date of the September Emergency Order, participants of a registered clearing agency had to close out that position within 35 consecutive settlement days, regardless of whether the security became a non-threshold security after the effective date of the September Emergency Order. Because this release makes the elimination of the options market maker exception as set forth in the September Emergency Order permanent, and because the amendments contained in this release are effective on the expiration date of the September Emergency Order (*i.e.*, October 17, 2008), any fails to deliver in threshold securities that were being closed out pursuant to the 35 consecutive settlement day phase-in period as set forth in the September

Emergency Order will not receive an additional 35 consecutive settlement days from October 17, 2008 in which to be closed out. Instead, the 35 consecutive settlement days will continue to run from the effective date of the September Emergency Order. Any fails to deliver in securities that became threshold securities after the effective date of the September Emergency Order and that are still threshold securities on the effective date of these amendments, must be closed out in accordance with the current close-out requirements of Regulation SHO, rather than within 35 consecutive settlement days of the effective date of these amendments.⁷¹

Although, as noted above, some commenters stated that the one-time 35 consecutive settlement day phase-in period was "particularly troubling because it would not be sufficient to account for pre-existing options positions that were assumed in reliance on the [options market maker exception]"⁷², we believe that a 35 consecutive settlement day phase-in period allows participants sufficient time to close out any previously excepted fail to deliver positions with limited disruption to the market and helps foster market stability because it provides participants with a sufficient length of time to effect purchases to close out these positions in an orderly manner.

We are also adopting our proposal that if the fail to deliver position persists for 35 consecutive settlement days from the effective date of the amendment, a participant of a registered clearing agency (and any broker-dealer for which it clears transactions, including any market maker), is prohibited from accepting any short sale orders or effecting further short sales in the particular threshold security without borrowing, or entering into a bona-fide arrangement to borrow, the security until the participant closes out the entire fail to deliver position by purchasing securities of like kind and quantity.⁷³ Due to the requirements of the September Emergency Order, this provision of the amendments is applicable to those fails to deliver that may be closed out within 35 consecutive settlement days of the effective date of the September Emergency Order but are not closed out within that time-frame.

⁶⁰ See, e.g., letter from CBOE; Options Exchanges; UBS.

⁶¹ See, e.g., letter from CBOE; Options Exchanges.

⁶² See letter from Susquehanna.

⁶³ Comment letters are available on the Commission's Internet Web site at <http://www.sec.gov/comments/s7-19-07/s71907.shtml>.

⁶⁴ See letter from Edward J. Joyce, President and Chief Operating Officer, Chicago Board Options Exchange, dated Aug. 15, 2008 ("CBOE 2008").

⁶⁵ See *id.*

⁶⁶ Accordingly, the amendments remove the options market maker exception from Rule 203(b)(3)(iii) of Regulation SHO, as adopted. We note that we have adopted on an interim final temporary basis, temporary Rule 204T that strengthens the delivery requirements of Regulation SHO for sales of all equity securities such that fails to deliver must be closed out by no later than the beginning of regular trading hours on the settlement day following the day the participant incurred the fail to deliver position. The temporary rule has a limited exception from this close-out requirement for options market makers. See Interim Final Temporary Rule, *supra* at notes 42 and 43.

⁶⁷ See Adopted Rule 203(b)(3)(iii).

⁶⁸ If the security is a threshold security on the effective date of the amendments, participants of a registered clearing agency will have to close out that position within 35 consecutive settlement days, regardless of whether the security becomes a non-threshold security after the effective date of the amendments.

⁶⁹ See 2004 Regulation SHO Adopting Release, 69 FR at 48031; 2007 Regulation SHO Final Amendments, 72 FR at 45557.

⁷⁰ See *supra* note 40.

⁷¹ For the duration of temporary Rule 204T, fails to deliver in all equity securities, regardless of whether or not the security is a threshold security, must be closed out in accordance with the requirements of the temporary rule.

⁷² See, e.g., letter from CBOE.

⁷³ See Adopted Rule 203(b)(3)(v).

If a security becomes a threshold security after the effective date of the amendments, any fails to deliver that result or resulted from short sales effected by a registered options market maker to establish or maintain a hedge on options positions that were created before the security became a threshold security will be subject to Regulation SHO's close-out requirements, similar to any other fail to deliver position in a threshold security.⁷⁴

We believe that it is appropriate to eliminate Regulation SHO's options market maker exception because substantial levels of fails to deliver continue to persist in threshold securities and it appears that a significant number of these fails to deliver are as a result of the options market maker exception.⁷⁵ As noted above, the Commission staff obtained data from SROs, options market makers, and clearing agency participants that shows extensive use of the options market maker exception to Regulation SHO's close-out requirement and the resulting fails to deliver that were not closed out during 2006, 2007, and 2008.⁷⁶ For example, the data showed that as of January 31, 2008, a participant that settles and clears for a large segment of the options market claimed the options market maker exception to the close-out requirement in 16 threshold securities for a total of 6,365,158 fails to deliver. As of February 29, 2008, the data indicated that this participant claimed the options market maker exception in 20 threshold securities for a total of 6,963,949 fails to deliver. In addition, according to data provided by FINRA for 2007 relating to a participant that settles and clears for a large segment of the options market, fail to deliver positions not closed out by the participant due to it claiming the options market maker exception ranged from 35,655 fails to deliver in one month that year, to as much as 5,621,982 in another month that year. According to a review conducted by several SROs between May to July 2006, there were 598 exceptions claimed, covering 58 threshold securities for a total of 11,759,799 fails to deliver.⁷⁷

In addition, following the elimination of the "grandfather" exception to Regulation SHO's close-out requirement, data collected by OEA

indicates that although fails to deliver overall decreased slightly, fails to deliver in optionable threshold securities increased significantly. The "grandfather" exception was eliminated as of October 15, 2007 with a one-time phase in period which expired on December 5, 2007. The sample data used by OEA compares two time periods: April 9, 2007–October 14, 2007, which is defined as the "pre-amendment period" and December 10, 2007–March 31, 2008, which is defined as the "post-amendment period." Specifically, the results of OEA's analysis of fails to deliver before and after the elimination of Regulation SHO's "grandfather" exception show that:⁷⁸

- The average daily number of optionable threshold securities increased by 25.0%.
- The average daily number of new fail to deliver positions in optionable threshold securities increased by 45.3%.
- For fails aged more than 17 days in optionable threshold securities, the average daily dollar value of fails to deliver increased by 73.4%.
- For fails aged more than 17 days in optionable threshold securities, the average daily number of fail to deliver positions increased by 30.7%.
- The average daily number of optionable threshold securities with fails aged more than 17 days increased by 40.9%.

The data shows a 25 percent increase in the number of optionable threshold securities and a substantial increase in fails to deliver in optionable threshold securities when comparing the pre- and post-amendment periods. As the OEA Memorandum notes "[o]ne explanation of these results is that the investors who previously failed to deliver in the equity market have now moved to the options market to establish a synthetic position. Since the option market makers still enjoy an exception to the close-out rule and tend to hedge their positions in the equity markets, the fails may now be coming from the option market makers instead of the equity investors themselves."⁷⁹

As discussed above, commenters opposing the proposed amendments criticized the impact of the proposals on options market making risk, quote depths, spread widths, and market liquidity, particularly in threshold securities and securities that might

become threshold securities.⁸⁰ Although we recognize these commenters' concerns regarding a mandatory close-out requirement for fails to deliver in threshold securities underlying options positions, for the reasons outlined below, we believe these potential effects are justified by the benefits of requiring that fails to deliver in all threshold securities be closed out within specific time-frames rather than being allowed to continue indefinitely. In addition, we believe the overall market impact of these potential effects, if any, will be minimal.

First, as discussed above, large and persistent fails to deliver can deprive shareholders of the benefits of ownership, such as voting and lending. They can also be indicative of potentially manipulative conduct, such as abusive "naked" short selling. The deprivation of the benefits of ownership, as well as the perception that abusive "naked" short selling is occurring in certain securities, can undermine the confidence of investors. These investors, in turn, may be reluctant to commit capital to an issuer they believe to be subject to manipulative conduct.

In the Reproposal, we sought comment on whether the proposed amendments would promote capital formation, including whether the proposed increased short sale restrictions would affect investors' decisions to invest in certain equity securities. Commenters expressed concern about "naked" short selling causing a drop in an issuer's stock price and that it may limit an issuer's ability to access the capital markets.⁸¹ We believe that, by requiring that all fails to deliver in threshold securities be closed out within specific time-frames rather than allowing them to continue indefinitely, there will be a decrease in the number of threshold securities with persistent and high levels of fails to deliver. If persistence on the threshold securities lists leads to an unwarranted decline in investor confidence about the security, the amendments should improve investor confidence about the security.⁸² We also believe that the amendments should lead to greater certainty in the settlement of securities which should strengthen investor confidence in the settlement process. The reduction in fails to deliver and the resulting reduction in the number of securities on the threshold securities

⁷⁴ See 17 CFR 242.203(b)(3); see also Interim Final Temporary Rule, *supra* notes 42 and 43 (amending Regulation SHO to strengthen the delivery requirements for sales of all equity securities).

⁷⁵ See 2008 Regulation SHO Re-Opening Release, 73 FR 40201.

⁷⁶ See *id.*

⁷⁷ See *id.*

⁷⁸ See *id.*; see also Memorandum from the Commission's Office of Economic Analysis (dated June 9, 2008), which is available on the Commission's Internet Web site at <http://www.sec.gov/comments/s7-19-07/s71907-562.pdf> (the "OEA Memorandum").

⁷⁹ See OEA Memorandum.

⁸⁰ See, e.g., letter from Citigroup.

⁸¹ See *supra* note 19.

⁸² See letter from Overstock.

lists could result in increased investor confidence.

Thus, by eliminating the options market maker exception so that all fails to deliver in threshold securities that result from short sales effected to maintain or establish a hedge on options positions will have to be closed out in accordance with Regulation SHO's close-out requirements, we expect a reduction in the number of threshold securities with large and persistent fails to deliver and, thereby, offsetting any potential negative impact of such fails to deliver on the market for these securities.⁸³

Second, while we recognize commenters' concerns that on a security-by-security basis the impact on options market maker costs, liquidity, quote depths, and spread widths may vary considerably, and in some cases, might be large,⁸⁴ we believe the overall market impact of the amendments will be minimal because the number of securities that will be impacted by the amendments will be relatively small. As previously noted by one commenter, a small number of securities that meet the definition of a "threshold security" have listed options, and those securities form a very small percentage of all securities that have options traded on them.⁸⁵ In addition, OEA estimates that in July 2008, 451 (13.6%) of the 3,326 securities with options classes trading on at least one options market appeared on a threshold securities list for at least one day that month. Even though these securities may form a small percentage of all securities that have options traded on them, we are still concerned that these fails to deliver can have a disproportionate impact on the markets and shareholders.

Moreover, the options market maker exception only excepted from Regulation SHO's mandatory 13 consecutive settlement day close-out requirement those fail to deliver positions resulting from short sales effected by registered options market makers to establish or maintain a hedge on options positions established *before* the underlying security became a threshold security. Thus, it did not apply to fails to deliver resulting from short sales effected to establish or maintain a hedge on options positions

established *after* the underlying security became a threshold security. Because the options market maker exception had a very limited application, the overall impact of its removal on liquidity, hedging costs, spreads, and depth, should be relatively small. Nevertheless, we understand commenters' concerns that on a security-by-security basis the impact on options market maker costs might, in some cases, be large. However, on balance, we believe such costs are justified by the benefits that are expected to result from requiring that all fails to deliver in threshold securities be closed out within specific time-frames rather than being allowed to continue indefinitely.

Third, some commenters noted concerns about having to close out fails to deliver in connection with the hedging of longer-term options because such fails may have been open for months or years.⁸⁶ These commenters suggested that with respect to such fails to deliver, the close-out requirement be tied to the expiration or liquidation of such options. However, this would mean that these fails to deliver could persist for months or years. We believe that all fails to deliver in threshold securities must be closed out in a timely manner. Longer-term options can have expiration periods that extend for years. To tie the close out of a fail to deliver position resulting from a hedge of such options to the liquidation or expiration of such options would undermine this goal. As discussed above, large and persistent fails to deliver can deprive shareholders of the benefits of ownership, such as voting and lending. We also believe that all sellers of securities should promptly deliver, or arrange for delivery of, securities to the respective buyer and all buyers of securities have a right to expect prompt delivery of securities purchased.

In addition, the 35 consecutive settlement day phase-in period of the amendments allows participants sufficient time to close out any previously excepted fail to deliver positions that may have been open for months or years as a result of hedging activity in connection with longer-term options. The phase-in period limits the disruption to the market and helps foster market stability because it provides participants with a sufficient length of time to effect purchases to close out these positions in an orderly manner.

Fourth, the potential impact of the amendments on options market making risk, quote depths, spread widths, and

market liquidity will be limited because, as noted above, Regulation SHO's options market maker exception applied only to those fail to deliver positions that resulted from short sales effected by registered options market makers to establish or maintain a hedge on options positions established *before* the underlying security became a threshold security. Thus, it did not apply to fails to deliver resulting from short sales effected to establish or maintain a hedge on options positions established *after* the underlying security became a threshold security. Some commenters stated that they believe there has been harm to the markets under the current close out structure of Regulation SHO.⁸⁷ As we noted in the Reproposal, however, in examining the application of the mandatory close-out requirement of Rule 203(b)(3) of Regulation SHO for all non-excepted fail to deliver positions, it does not appear that Rule 203(b)(3)'s close-out requirement for non-excepted fails to deliver in threshold securities has impacted options market makers' willingness to provide liquidity in threshold securities or securities likely to become threshold securities, or substantially impacted option market maker risk, quote depths, or spread widths.

In addition, we note that options market makers may only need to hedge via a short sale in the equity markets for a small fraction of their total trading activity. Academic research suggests that non-market maker option open interest tends to heavily favor the upside, which implies that the customary hedge for the typical option market making position is a long equity position rather than a short equity position.⁸⁸ More recent data from January to July 2008 also suggests an upside bias in option open interest.⁸⁹

Fifth, while commenters may believe that a mandatory close-out requirement for all fails to deliver resulting from hedging activity in the options markets may potentially impact liquidity, hedging costs, depth, or spreads, or impact the willingness of options market makers to make markets in certain securities, we believe that such effects are justified by our belief that fails to deliver resulting from hedging activities by options market makers

⁸³ See 17 CFR 242.203(b)(3); see also Interim Final Temporary Rule, *supra* notes 42 and 43 (amending Regulation SHO to strengthen the delivery requirements for sales of all equity securities).

⁸⁴ See, e.g., letter from Options Exchanges.

⁸⁵ For example, in its letter, Susquehanna noted that in June 2007, 174 (8%) of the 2,242 stocks with options classes trading on the CBOE, appeared on a threshold list for at least one day that month. See letter from Susquehanna.

⁸⁶ See, e.g., letter from CBOE; Options Exchanges; Citigroup.

⁸⁷ See, e.g., letter from CBOE; see also letter from Overstock.

⁸⁸ See Lakonishok, Poteshman, and Lee, "Investor Behavior and the Options Markets," Working Paper 10264 (2004) (<http://www.nber.org/papers/w10264.pdf>).

⁸⁹ Data from The Options Clearing Corporation web site shows that call open interest generally exceeded put open interest by about 10% on the average day during January to July 2008.

should be treated similarly to fails to deliver resulting from sales in the equities markets so that market participants trading threshold securities in the options markets do not receive an advantage over those trading such securities in the equities markets.

As discussed above, commenters who opposed elimination of the exception argued that options market makers, unlike equity market makers, should have an exception to Regulation SHO's close-out requirement because there are distinct differences between options market making and market making in the underlying stock. We do not believe that for purposes of the close-out requirement of Regulation SHO, options and equity market makers should be treated differently. Due to our concerns about the potentially negative market impact of large and persistent fails to deliver, and the fact that we continue to observe a small number of threshold securities with fail to deliver positions that are not being closed out under existing delivery and settlement requirements, we adopted amendments to eliminate Regulation SHO's "grandfather" provision that allowed fails to deliver resulting from long or short sales of equity securities to persist indefinitely if the fails to deliver occurred prior to the security becoming a threshold security.⁹⁰ We believe that once a security becomes a threshold security, fails to deliver in that security must be closed out, regardless of whether or not the fails to deliver resulted from sales of the security in connection with the options or equities markets.

Moreover, we are concerned that the options market maker exception might have allowed for a regulatory arbitrage not permitted in the equities markets.⁹¹ For example, an options market maker who sells short to hedge put options purchased by a market participant unable to locate shares for a short sale in accordance with Rule 203(b)(2) of Regulation SHO may not have to close out any fails to deliver that result from such short sales under the options market maker exception. The ability of options market makers to sell short and never have to close out a resulting fail to deliver position, provided the short sale was effected to hedge options positions created before the security became a threshold security, runs counter to the goal of requiring that all

fails to deliver in threshold securities be closed out.

In addition, we note that although the proposed alternatives could lessen the potential negative impact of large and persistent fails to deliver, we believe that complete elimination of the options market maker exception would achieve this goal more effectively. By eliminating the options market maker exception, all fails to deliver in threshold securities will have to be closed out in accordance with Regulation SHO's close-out requirements.⁹² The proposed alternatives, however, would each allow a longer period of time for fail to deliver positions to be closed out. Specifically, the first alternative would allow certain fails to deliver to be closed out within 35 consecutive settlement days of the security becoming a threshold security. Under the second alternative, although some fails to deliver would be required to be closed out in less than 35 consecutive settlement days, other fails to deliver would not have to be closed out until 35 consecutive settlement days from the security becoming a threshold security.⁹³

As we discussed in the Reproposal,⁹⁴ we believe that the options market maker exception should be eliminated, rather than limited as in the proposed alternatives, because large and persistent fails to deliver are not being closed out under existing delivery requirements and because we are concerned that these fails to deliver may have a negative impact on the market for those securities. In addition, as noted in the Reproposal, we believe that fails to deliver resulting from hedging activities by options market makers should be treated similarly to fails to deliver resulting from sales in the equities markets so that market participants trading threshold securities in the options markets do not receive an advantage over those trading such securities in the equities markets. Thus, we have determined that the proposed alternatives are not feasible or in the public interest to act upon at this time.

IV. Bona-Fide Market Making

We are also taking the opportunity to provide guidance regarding issues that have arisen regarding what is bona-fide market making for purposes of complying with the market maker exception to the "locate" requirement of

Rule 203(b)(1) of Regulation SHO. The 2004 Regulation SHO Adopting Release provides guidance as to what is bona-fide market making. We are reiterating that guidance and providing additional guidance in this adopting release.

Rule 203(b)(1) provides that "[a] broker or dealer may not accept a short sale order in an equity security from another person, or effect a short sale in an equity security for its own account, unless the broker or dealer has: (i) Borrowed the security, or entered into a bona-fide arrangement to borrow the security; or (ii) Reasonable grounds to believe that the security can be borrowed so that it can be delivered on the date delivery is due; and (iii) Documented compliance with this paragraph (b)(1)." ⁹⁵ This is known as the "locate" requirement. Rule 203(b)(2)(iii) excepts market makers engaged in bona-fide market making activities from the locate requirement. The Commission adopted this narrow exception to the locate requirement because such market makers may need to facilitate customer orders in a fast moving market without possible delays associated with complying with the locate requirement.⁹⁶

The term "market maker" includes any specialist permitted to act as a dealer, any dealer acting in the capacity of a block positioner, and any dealer who, with respect to a security, holds itself out (by entering quotations in an inter-dealer quotation system or otherwise) as being willing to buy and sell such security for its own account on a regular or continuous basis.⁹⁷ Moreover, as the Commission has stated previously, a market maker engaged in bona-fide market making is a "broker-dealer that deals on a regular basis with other broker-dealers, actively buying and selling the subject security as well as regularly and continuously placing quotations in a quotation medium on both the bid and ask side of the market." ⁹⁸ We note that block positioners, to the extent they engage in bona fide block positioning activities,

⁹⁵ 17 CFR 242.203(b).

⁹⁶ See 2004 Regulation SHO Adopting Release, 69 FR at 48015, n. 67; see also Emergency Order Pursuant to Section 12(k)(2) of the Securities Exchange Act of 1934 Taking Temporary Action to Respond to Market Developments, Exchange Act Release No. 58166 (July 15, 2008); Amendment to Emergency Order Pursuant to Section 12(k)(2) of the Securities Exchange Act of 1934 Taking Temporary Action to Respond to Market Developments, Exchange Act Release No. 58190 (July 18, 2008) (excepting from the Emergency Order bona fide market makers).

⁹⁷ See 2004 Regulation SHO Adopting Release, 69 FR at 48015, n. 66 (citing to Section 3(a)(38) of the Exchange Act).

⁹⁸ See Exchange Act Release No. 32632 (July 14, 1993), 58 FR 39072, 39074 (July 21, 1993).

⁹⁰ See 2007 Regulation SHO Final Amendments, 72 FR 45544; see also 2006 Regulation SHO Proposed Amendments, 71 FR 41710.

⁹¹ See Reproposal, 72 FR at 45563.

⁹² See 17 CFR 242.203(b)(3); see also Interim Final Temporary Rule, *supra* notes 42 and 43 (amending Regulation SHO to strengthen the delivery requirements for sales of all equity securities).

⁹³ See Reproposal, 72 FR at 45589–45590.

⁹⁴ See *id.* at 45566–45567.

may also rely on this exception from the locate requirement in connection with such activities. Rule 3b-8(c) of the Exchange Act (17 CFR 240.3b-8(c)) defines a “qualified block positioner” as a dealer that: (1) Is a broker or dealer registered pursuant to Section 15 of the Exchange Act; (2) is subject to and in compliance with Rule 15c3-1 of the Exchange Act (17 CFR 240.15c3-1); (3) has and maintains minimum net capital, as defined in Rule 15c3-1, of \$1,000,000; and (4) except when such activity is unlawful, meets all of the following conditions: (i) Engages in the activity of purchasing long or selling short, from time to time, from or to a customer (other than a partner or a joint venture or other entity in which a partner, the dealer, or a person associated with such dealer, as defined in Section 3(a)(18) of the Exchange Act, participates) a block of stock with a current market value of \$200,000 or more in a single transaction, or in several transactions at approximately the same time, from a single source to facilitate a sale or purchase by such customer, (ii) has determined in the exercise of reasonable diligence that the block could not be sold to or purchased from others on equivalent or better terms, and (iii) sells the shares comprising the block as rapidly as possible commensurate with the circumstances.

As discussed below, in the 2004 Regulation Adopting Release, we provided examples of the types of activities that would indicate that a market maker is not engaged in bona fide market making activities. In addition to reiterating that guidance, we are also providing examples of the types of activities that would indicate that a market maker is engaged in bona fide market making activities for purposes of claiming the exception to Regulation SHO’s locate requirement.

Although determining whether or not a market maker is engaged in bona-fide market making would depend on the facts and circumstances of the particular activity, factors that indicate a market maker is engaged in bona-fide market making activities may include, for example, whether the market maker incurs any economic or market risk with respect to the securities (e.g., by putting their own capital at risk to provide continuous two-sided quotes in markets). In fulfilling its obligations as a market maker, a market maker engaged in bona-fide market making may provide liquidity to a security’s market, take the other side of trades when there are short-term buy-and-sell-side imbalances in customer orders, or attempt to prevent excess volatility.

Such activities will result in the market maker assuming some risk. Thus, if the market maker does not incur any market risk with respect to a transaction or related set of transactions, the market maker may not be engaged in bona-fide market making activities.⁹⁹

A pattern of trading that includes both purchases and sales in roughly comparable amounts to provide liquidity to customers or other broker-dealers would generally be an indication that a market maker is engaged in bona-fide market making activity. Thus, even selling short into a declining market may be an indication that a market maker is engaged in bona-fide market making activity. Continuous quotations that are at or near the market on both sides and that are communicated and represented in a way that makes them widely accessible to investors and other broker-dealers are also an indication that a market maker is engaged in bona-fide market making activity. However, as noted above, a market maker must hold itself out as being willing to buy and sell a security for its own account on a regular or continuous basis. Thus, a market maker’s quotes must be generally accessible to the public for a market maker to be considered as holding itself out as being willing to buy and sell a security for its own account on a regular or continuous basis, and therefore, to be engaged in bona-fide market making activity.

While determining whether or not a market maker is engaged in bona-fide market making would depend on the facts and circumstances of the particular activity, there are clear examples of what types of activities would not be bona-fide market making activities. For example, the Commission has stated that bona-fide market making does not include activity that is related to speculative selling strategies or investment purposes of the broker-dealer and is disproportionate to the usual market making patterns or practices of the broker-dealer in that security.¹⁰⁰ Likewise, where a market maker posts continually at or near the best offer, but does not also post at or near the best bid, the market maker’s activities would not generally qualify as

⁹⁹ For example, if a market maker sells stock (short) together with a synthetic short position (e.g., a conversion) to a client and the client then sells the stock (long) retaining the synthetic short position, the effect would be as if the market maker had “rented” its exemption to the client. Such transactions or other transactions that have the same effect will not be considered bona-fide market making activity.

¹⁰⁰ See 2004 Regulation SHO Adopting Release, 69 FR at 48015.

bona-fide market making.¹⁰¹ Moreover, a market maker that continually executes short sales away from its posted quotes would generally not be considered to be engaging in bona-fide market making.¹⁰² For purposes of qualifying for the locate exception in Regulation SHO, a market maker must also be a market maker in the security being sold, and must be engaged in bona-fide market making in that security at the time of the short sale.¹⁰³

V. Other Matters

The Administrative Procedure Act also generally requires that an agency publish an adopted rule in the **Federal Register** 30 days before it becomes effective.¹⁰⁴ This requirement, however, does not apply if the agency finds good cause for making the rule effective sooner.¹⁰⁵

As noted above, in the September Emergency Order, we adopted, and made immediately effective, amendments to Rule 203(b)(3) of Regulation SHO to eliminate the options market maker exception to Regulation SHO’s close-out requirement. The September Emergency Order expires on October 17, 2008. We believe that the amendments contained in this adopting release should be effective on October 17, 2008 so that the elimination of the options market maker exception becomes permanent when the September Emergency Order expires. In addition, we believe that the amendments should become effective on October 17, 2008 so that fails to deliver resulting from short sales in both the equity and options markets receive similar treatment under the close-out requirements of Regulation SHO, and to further reduce fails to deliver and address potentially abusive “naked” short selling. Thus, the Commission finds good cause to make the amendments effective on October 17, 2008.

VI. Paperwork Reduction Act

The amendments to Regulation SHO do not contain a “collection of information” requirement within the meaning of the Paperwork Reduction Act of 1995 (“PRA”).¹⁰⁶

VII. Consideration of Costs and Benefits of Proposed Amendments to Regulation SHO

We are sensitive to the costs and benefits of our rules and we have

¹⁰¹ See *id.*

¹⁰² See *id.*

¹⁰³ See Rule 203(b)(1) and (b)(2)(iii).

¹⁰⁴ See 5 U.S.C. § 553(d).

¹⁰⁵ *Id.*

¹⁰⁶ 44 U.S.C. 3501 *et seq.*

considered the costs and the benefits of the amendments to Regulation SHO. In order to assist us in evaluating the costs and benefits, in the Reproposal, we encouraged commenters to discuss any costs or benefits that the amendments might impose. In particular, we requested comment on the potential costs for any modifications to both computer systems and surveillance mechanisms and for information gathering, management, and recordkeeping systems or procedures, as well as any potential benefits resulting from the amendments for registrants, issuers, investors, brokers or dealers, other securities industry professionals, regulators, and other market participants. Commenters were encouraged to provide analysis and data to support their views on the costs and benefits associated with the amendments to Regulation SHO.

A. Benefits

The amendments to Rule 203(b)(3) of Regulation SHO are intended to further reduce the number of persistent fails to deliver in threshold securities by eliminating the options market maker exception to Regulation SHO's close-out requirement. As a result of the amendments, all fails to deliver in a threshold security resulting from short sales by a registered options market maker effected to establish or maintain a hedge on options positions established before the security became a threshold security will, like all other fails to deliver in threshold securities, have to be closed out in accordance with Regulation SHO's close-out requirements.¹⁰⁷

We are concerned that large and persistent fails to deliver are not being closed out due to the options market maker exception in Regulation SHO, and that these fails to deliver may have a negative effect on the market in these securities.¹⁰⁸ For example, large and persistent fails to deliver may deprive shareholders of the benefits of ownership, such as voting and lending.¹⁰⁹ In addition, where a seller of securities fails to deliver securities on trade settlement date, in effect the seller unilaterally converts a securities contract (which should settle within the standard 3-day settlement period) into

an undated futures-type contract, to which the buyer may not have agreed, or that would have been priced differently.¹¹⁰ Moreover, sellers that fail to deliver securities on settlement date may enjoy fewer restrictions than if they were required to deliver the securities in a timely manner, and such sellers may attempt to use this additional freedom to engage in trading activities that deliberately depress the price of a security.¹¹¹ In addition, by not borrowing securities and, therefore, not making delivery within the standard three-day settlement period, the seller avoids the costs of borrowing.

Thus, consistent with the Commission's investor protection mandate, the amendments will benefit investors by facilitating the receipt of shares so that more investors receive the benefits associated with share ownership, such as the use of the shares for voting and lending purposes. The amendments will also enhance investor confidence as they make investment decisions by providing investors with greater assurance that securities will be delivered as expected. An increase in investor confidence in the market should facilitate investment.

The amendments will also benefit issuers. A high level of persistent fails to deliver in a security may be perceived by potential investors negatively and may affect their decision about making a capital commitment.¹¹² For example, in response to the Reproposal, one commenter stated that it believes that the current options market maker exception "harms investors and issuers, hinders the formation of capital, and is fatally flawed as written" and that it should be eliminated.¹¹³ Some issuers may believe that they have endured unwarranted reputational damage due to investors' negative perceptions regarding a security having a large fail to deliver position and becoming a threshold security.¹¹⁴ Thus, issuers may believe the elimination of the options market maker exception will restore their good name. Some issuers may also believe that large and persistent fails to deliver indicate that they have been the target of potentially manipulative conduct as a result of "naked" short

selling.¹¹⁵ Thus, elimination of the options market maker exception should decrease the possibility of artificial market influences and, therefore, should contribute to price efficiency.

B. Costs

To comply with Regulation SHO when it became effective in January 2005, market participants needed to modify their recordkeeping systems and surveillance mechanisms. In addition, market participants should have retained and trained the necessary personnel to ensure compliance with the rule. Thus, the infrastructure necessary to comply with the amendments should already be in place because the amendments will require that all fails to deliver be closed out in accordance with the close-out requirements of Regulation SHO.¹¹⁶ The only fails to deliver not subject to Regulation SHO's mandatory close-out requirements will be those fails to deliver that would be previously-excepted from the close-out requirement and, therefore, eligible for the one-time 35 consecutive settlement day phase-in period of the amendments.¹¹⁷ Thus, we anticipate that any changes to personnel, computer hardware and software, recordkeeping or surveillance costs will be minimal.

In the Reproposal, we requested comment regarding the costs of the proposed amendments to the options market maker exception and how those costs would affect liquidity in the options markets. As discussed above, commenters opposing the proposed amendments criticized the impact of the proposals on options market making risk, quote depths, spread widths, and market liquidity, particularly in threshold securities and securities that might become threshold securities. These commenters stated that the current exception is integral to the options market maker's ability to make markets and manage risk and that, without the exception, making continuous markets would be very difficult, particularly in longer-dated options.¹¹⁸ One commenter suggested that "withdrawing or greatly reducing the exception would cause varying losses of liquidity in over 20% of listed

¹⁰⁹ See *id.*

options and their underlying stocks.”¹¹⁹ Another commenter stated that “[i]f the exception is eliminated or narrowed in the manner proposed, [it] anticipates [options market makers] would be reluctant or even unable to effectively make markets on securities if they cannot be certain of their ability to establish and maintain an effective hedge and manage their risk through selling stock.”¹²⁰ Another commented that “[t]he uncertainty, time, processing and expense necessary to pre-borrow when effecting a short sale, as well as the uncertainty and expense caused by a close out of a hedge, will by its nature adversely affect the [options market makers’] pricing of the option.”¹²¹ However, one commenter noted that “options market makers should factor the cost of borrowing stock and selling short into the price of the put options being sold.”¹²² Another commenter noted that “[o]ptions market makers should have to pay to borrow stock like everyone else does. Most options market makers are excellent risk managers, and they can manage the risk that stock borrowing costs can fluctuate. Any additional costs involved will rightfully be passed to those who trade options.”¹²³

Although we recognize commenters’ concerns that a mandatory close-out requirement for fails to deliver in threshold securities underlying options positions, for the reasons outlined below, we believe these potential effects are justified by the benefits of requiring that fails to deliver in all threshold securities be closed out within specific time-frames rather than being allowed to continue indefinitely. In addition, we believe the overall market impact of these potential effects, if any, will be minimal.

First, as discussed above, large and persistent fails to deliver can deprive shareholders of the benefits of ownership, such as voting and lending. They can also be indicative of potentially manipulative conduct, such as abusive “naked” short selling. The deprivation of the benefits of ownership, as well as the perception that abusive “naked” short selling is occurring in certain securities, can undermine the confidence of investors. These investors, in turn, may be reluctant to commit capital to an issuer they believe to be subject to manipulative conduct.

In the Reproposal, we sought comment on whether the proposed amendments would promote capital formation, including whether the proposed increased short sale restrictions would affect investors’ decisions to invest in certain equity securities. Commenters expressed concern about “naked” short selling causing a drop in an issuer’s stock price and that it may limit an issuer’s ability to access the capital markets.¹²⁴ We believe that, by requiring that all fails to deliver in threshold securities be closed out within specific time-frames rather than allowing them to continue indefinitely, there will be a decrease in the number of threshold securities with persistent and high levels of fails to deliver. If persistence on the threshold securities lists leads to an unwarranted decline in investor confidence about the security, the amendments should improve investor confidence about the security.¹²⁵ We also believe that the reduction in fails to deliver and the resulting reduction in the number of securities on the threshold securities lists should strengthen investor confidence and increase certainty in the settlement process.

Thus, by eliminating the options market maker exception so that all fails to deliver in threshold securities that result from short sales effected to maintain or establish a hedge on options positions will have to be closed out in accordance with Regulation SHO’s close-out requirements,¹²⁶ we expect a reduction in the number of threshold securities with large and persistent fails to deliver and, thereby, offsetting any potential negative impact of such fails to deliver on the market for these securities.

Second, while we recognize commenters’ concerns that on a security-by-security basis the impact on options market maker costs, liquidity, quote depths, and spread widths may vary considerably, and in some cases, might be large,¹²⁷ we believe the overall market impact of the amendments will be minimal because the number of securities that will be impacted by the amendments will be relatively small. As previously noted by one commenter, a small number of securities that meet the definition of a “threshold security” have listed options, and those securities form a very small percentage of all securities

that have options traded on them.¹²⁸ In addition, OEA estimates that in July 2008, 451 (13.6%) of the 3,326 securities with options classes trading on at least one options market appeared on a threshold securities list for at least one day that month. Even though these securities may form a small percentage of all securities that have options traded on them, we are still concerned that these fails to deliver can have a disproportionate impact on the markets and shareholders.

Moreover, the options market maker exception only excepted from Regulation SHO’s mandatory 13 consecutive settlement day close-out requirement only those fail to deliver positions that resulted from short sales effected by registered options market makers to establish or maintain a hedge on options positions established *before* the underlying security became a threshold security. Thus, it does not apply to fails to deliver resulting from short sales effected to establish or maintain a hedge on options positions established *after* the underlying security became a threshold security. Because the options market maker exception has a very limited application, we anticipate that the overall impact of its removal on liquidity, hedging costs, spreads, and depth should be relatively small. Nevertheless, we understand commenters’ concerns that on a security-by-security basis the impact on options market maker costs might, in some cases, be large. However, on balance, we believe such costs are justified by the benefits that are expected to result from requiring that all fails to deliver in threshold securities be closed out within specific time-frames rather than being allowed to continue indefinitely.

Third, some commenters noted concerns about having to close out fails to deliver in connection with the hedging of longer-term options because such fails may have been open for months or years.¹²⁹ These commenters suggested that with respect to such fails to deliver, the close-out requirement be tied to the expiration or liquidation of such options. However, this would mean that these fails to deliver could persist for months or years. We believe that all fails to deliver in threshold securities must be closed out in a timely manner. Longer-term options can have expiration periods that extend for years. To tie the close out of a fail to deliver position resulting from a hedge of such options to the liquidation or expiration

¹²⁴ See *supra* note 19.

¹²⁵ See letter from Overstock.

¹²⁶ See 17 CFR 242.203(b)(3); see also Interim Final Temporary Rule, *supra* notes 42 and 43 (amending Regulation SHO to strengthen the delivery requirements for sales of all equity securities).

¹¹⁹ See letter from Susquehanna.

¹²⁰ See *id.*; see also letter from Options Exchanges; Citigroup.

¹²¹ See letter from Citigroup.

¹²² See letter from Fairfax Financial.

¹²³ See letter from Angel.

of such options would undermine this goal. As discussed above, large and persistent fails to deliver can deprive shareholders of the benefits of ownership, such as voting and lending. We also believe that all sellers of securities should promptly deliver, or arrange for delivery of, securities to the respective buyer and all buyers of securities have a right to expect prompt delivery of securities purchased.

In addition, the 35 consecutive settlement day phase-in period of the amendments allows participants sufficient time to close out any previously excepted fail to deliver positions that may have been open for month or years as a result of hedging activity in connection with longer-term options. The phase-in period limits the disruption to the market and helps foster market stability because it provides participants with a sufficient length of time to close out these positions in an orderly manner.

Fourth, the potential impact of the amendments on options market making risk, quote depths, spread widths, and market liquidity will be limited because, as noted above, Regulation SHO's options market maker exception applied only to those fail to deliver positions that resulted from short sales effected by registered options market makers to establish or maintain a hedge on options positions established *before* the underlying security became a threshold security. Thus, it does not apply to fails to deliver resulting from short sales effected to establish or maintain a hedge on options positions established *after* the underlying security became a threshold security. Some commenters stated that they believe there has been harm to the markets under the current close out structure of Regulation SHO.¹³⁰ As we noted in the Reproposal, however, in examining the application of the mandatory close-out requirement of Rule 203(b)(3) of Regulation SHO for all non-excepted fail to deliver positions, it does not appear that Rule 203(b)(3)'s close-out requirement for non-excepted fails to deliver in threshold securities has impacted options market makers' willingness to provide liquidity in threshold securities or securities likely to become threshold securities, or substantially impacted option market maker risk, quote depths, or spread widths.

We also note that option market makers may only need to hedge via a short sale in the equity markets for a small fraction of their total trading activity. Academic research suggests

that non-market maker option open interest tends to heavily favor the upside, which implies that the customary hedge for the typical option market making position is a long equity position rather than a short equity position.¹³¹ More recent data from January to July 2008 also suggests an upside bias in option open interest.¹³²

Fifth, while commenters may believe that a mandatory close-out requirement for all fails to deliver resulting from hedging activity in the options markets may potentially impact liquidity, hedging costs, depth, or spreads, or impact the willingness of options market makers to make markets in certain securities, we believe that such potential effects are justified by our belief that fails to deliver resulting from hedging activities by options market makers should be treated similarly to fails to deliver resulting from sales in the equities markets so that market participants trading threshold securities in the options markets do not receive an advantage over those trading such securities in the equities markets.

As discussed above, commenters who opposed elimination of the exception argued that options market makers, unlike equity market makers, should have an exception to Regulation SHO's close-out requirement because there are distinct differences between options market making and market making in the underlying stock. We do not believe that for purposes of the close-out requirement of Regulation SHO, options and equity market makers should be treated differently. Due to our concerns about the potentially negative market impact of large and persistent fails to deliver, and the fact that we continue to observe a small number of threshold securities with fail to deliver positions that are not being closed out under existing delivery and settlement requirements, we adopted amendments to eliminate Regulation SHO's "grandfather" provision that allowed fails to deliver resulting from long or short sales of equity securities to persist indefinitely if the fails to deliver occurred prior to the security becoming a threshold security.¹³³ We believe that once a security becomes a threshold security, fails to deliver in that security must be closed out, regardless of whether or not the fails to deliver resulted from sales of the security in

connection with the options or equities markets.

Moreover, we are concerned that the options market maker exception might have allowed for a regulatory arbitrage not permitted in the equities markets.¹³⁴ For example, an options market maker who sells short to hedge put options purchased by a market participant unable to locate shares for a short sale in accordance with Rule 203(b)(2) of Regulation SHO may not have to close out any fails to deliver that result from such short sales under the options market maker exception. The ability of options market makers to sell short and never have to close out a resulting fail to deliver position, provided the short sale was effected to hedge options positions created before the security became a threshold security, runs counter to the goal of requiring that all fails to deliver in threshold securities be closed out.

Also, the pre-borrow requirement of Adopted Rule 203(b)(3)(v) for fail to deliver positions that are not closed out within the applicable time-frame set forth in the amendments will result in limited, if any, costs to participants of a registered clearing agency, and options market makers for which they clear transactions.¹³⁵ The pre-borrow requirement is similar to the pre-borrow requirement of Rule 203(b)(3)(iv) of Regulation SHO relating to fails to deliver that have not been closed out in accordance with the 13 consecutive settlement day close-out requirement of Regulation SHO.¹³⁶ Thus, participants of a registered clearing agency, and any options market maker for which it clears transactions, must already comply with such a requirement if a fail to deliver position has not been closed out in accordance with Regulation SHO's mandatory close-out requirement. Accordingly, these entities should already have in place the personnel, recordkeeping, systems, and surveillance mechanisms necessary to comply with the adopted pre-borrow requirement. While the pre-borrow requirement may be costly in each instance it is used, pre-borrowing is not necessary if a close-out is completed on time and, therefore, may be used only rarely.

VIII. Consideration of Burden and Promotion of Efficiency, Competition, and Capital Formation

Section 3(f) of the Exchange Act requires the Commission, whenever it engages in rulemaking and is required to

¹³¹ See *supra* note 88.

¹³² See *supra* note 89.

¹³³ See 2007 Regulation SHO Final Amendments, 72 FR 45544; see also 2006 Regulation SHO Proposed Amendments, 71 FR 41710.

¹³⁴ Reproposal, 72 FR at 45563.

¹³⁵ See Adopted Rule 203(b)(3)(v).

¹³⁶ See 17 CFR 242.203(b)(3)(iv).

¹³⁰ See, e.g., letter from CBOE; see also letter from Overstock.

consider or determine whether an action is necessary or appropriate in the public interest, to consider whether the action would promote efficiency, competition, and capital formation.¹³⁷ In addition, Section 23(a)(2) of the Exchange Act requires the Commission, when making rules under the Exchange Act, to consider the impact such rules would have on competition.¹³⁸ Exchange Act Section 23(a)(2) prohibits the Commission from adopting any rule that would impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act.

We believe the amendments will have minimal impact on the promotion of price efficiency. In the Reproposal, we sought comment on whether the amendments would promote price efficiency. Commenters expressed concern that failures to deliver due to the options market maker exception harm pricing efficiency in the equity markets.¹³⁹ Other commenters stated that the proposed amendments to the options market maker exception would disrupt the markets because they would not provide sufficient flexibility to permit efficient hedging by options market makers, would unnecessarily increase risks and costs to hedge, and would adversely impact liquidity and result in higher costs to customers.¹⁴⁰ These commenters stated that they believe the proposed amendments would likely discourage options market makers from making markets in illiquid securities since the risk associated in maintaining the hedges in these option positions would be too great.¹⁴¹ Moreover, these commenters stated that the reluctance of options market makers to make markets in threshold securities would result in wider spreads in such securities to account for the increased costs of hedging, to the detriment of investors.¹⁴²

We recognize commenters' concerns that a mandatory close-out requirement for fails to deliver in threshold securities underlying options positions may potentially impact options market makers' willingness to provide liquidity in threshold securities, make it more costly for options market makers to accommodate customer orders, or result in wider bid-ask spreads or less depth.¹⁴³ For the reasons discussed below, however, we believe that the

overall impact of these potential effects, if any, will be minimal.

We believe that the overall market impact of the amendments will be minimal because the number of securities that will be impacted by the amendments will be relatively small. The amendments apply only to those threshold securities with listed options. As previously noted by one commenter, a small number of securities that meet Regulation SHO's definition of a "threshold security" have listed options, and those securities form a very small percentage of all securities that have options traded on them.¹⁴⁴ In addition, the amendments will only impact fails to deliver in those securities that resulted from short sales by registered options market makers to hedge options positions that were created before, rather than after, the security became a threshold security because all other fails to deliver in threshold securities are already subject to Regulation SHO's close-out requirements.¹⁴⁵

Because the options market maker exception has a very limited application, we anticipate that the overall impact of its removal on liquidity, hedging costs, spreads, and depth will be relatively small. Nevertheless, we understand commenters' concerns that on a security-by-security basis the impact on options market maker costs might, in some cases, be large. However, on balance, we believe such costs are justified by the benefits that are expected to result from requiring that all fails to deliver in threshold securities be closed out within specific time-frames rather than being allowed to continue indefinitely.

We also note that option market makers may only need to hedge via a short sale in the equity markets for a small fraction of their total trading activity. Academic research suggests that non-market maker option open interest tends to heavily favor the upside, which implies that the customary hedge for the typical option market making position is a long equity position rather than a short equity position.¹⁴⁶ More recent data from January to July 2008 also suggests an upside bias in option open interest.¹⁴⁷

In addition, the 35 consecutive settlement day phase-in period of the

amendments allows participants sufficient time to close out any previously excepted fail to deliver positions that may have been open for months or years as a result of hedging activity in connection with longer-term options. The phase-in period limits the disruption to the market, and helps foster market stability by providing participants with a sufficient length of time to close out these positions in an orderly manner. Some of the commenters to the Reproposal also noted that 13 consecutive settlement days was more than sufficient to close out a fail to deliver relating to an options position.¹⁴⁸

While commenters may believe that a mandatory close-out requirement may potentially impact liquidity, hedging costs, depth, or spreads, or impact the willingness of options market makers to make markets in securities subject to such a requirement, we believe such potential effects are justified by our belief that fails to deliver resulting from hedging activities by options market makers should be treated similarly to fails to deliver resulting from sales in the equities markets so that market participants trading threshold securities in the options markets do not receive an advantage over those trading such securities in the equities markets. In addition, we believe that such potential costs are justified by the benefits of requiring that all fails to deliver be closed out rather than being allowed to continue indefinitely.

We also believe that the amendments will have minimal impact on the promotion of capital formation. Large and persistent fails to deliver can deprive shareholders of the benefits of ownership, such as voting and lending. They can also be indicative of potentially manipulative conduct, such as abusive "naked" short selling. The deprivation of the benefits of ownership, as well as the perception that abusive "naked" short selling is occurring in certain securities, can undermine the confidence of investors. These investors, in turn, may be reluctant to commit capital to an issuer they believe to be subject to such manipulative conduct.

In the Reproposal, we sought comment on whether the proposed amendments would promote capital formation, including whether the proposed increased short sale restrictions would affect investors' decisions to invest in certain equity securities. Commenters expressed concern about the potential impact of

¹⁴⁶ See *supra* note 88.

¹⁴⁷ See *supra* note 89.

¹⁴⁸ See, e.g., letter from U.S. Chamber of Commerce.

“naked” short selling on capital formation claiming that “naked” short selling causes a drop in an issuer’s stock price that may limit the issuer’s ability to access the capital markets.¹⁴⁹ Another commenter that the options market maker exception “is a well known tool of manipulators and must be removed to ensure a level playing field for public companies and their shareholders.”¹⁵⁰ In addition, one commenter stated that it believes that the current options market maker exception “harms investors and issuers, hinders the formation of capital, and is fatally flawed as written” and that it should be eliminated.¹⁵¹

By requiring that all fails to deliver in threshold securities be closed out rather than allowing them to continue indefinitely, we believe that there will be a decrease in the number of threshold securities with persistent and high levels of fails to deliver. If persistence on the threshold securities lists leads to an unwarranted decline in investor confidence about the security, the amendments should improve investor confidence about the security. We also believe that the amendments will lead to greater certainty in the settlement of securities which should strengthen investor confidence in the settlement process. The reduction in fails to deliver and the resulting reduction in the number of securities on the threshold securities lists may result in increased investor confidence.

The amendments to eliminate the options market maker exception will also not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act. By eliminating the options market maker exception, the Commission believes the amendments will promote competition by requiring similarly situated participants of a registered clearing agency, including broker-dealers for which they clear transactions, to close out fails to deliver in all threshold securities within similar time-frames.¹⁵²

One commenter, in particular, noted that the options market maker exception “is a well known tool of manipulators and must be removed to ensure a level playing field for public companies and their shareholders.”¹⁵³

As discussed above, commenters who opposed elimination of the exception argued that options market makers, unlike equity market makers, should have an exception to Regulation SHO’s close-out requirement because there are distinct differences between options market making and market making in the underlying stock. We do not believe that for purposes of the close-out requirement of Regulation SHO, options and equity market makers should be treated differently. Due to our concerns about the potentially negative market impact of large and persistent fails to deliver, and the fact that we continue to observe a small number of threshold securities with fail to deliver positions that are not being closed out under existing delivery and settlement requirements, we adopted amendments to eliminate Regulation SHO’s “grandfather” provision that allowed fails to deliver resulting from long or short sales of equity securities to persist indefinitely if the fails to deliver occurred prior to the security becoming a threshold security.¹⁵⁴ We believe that once a security becomes a threshold security, fails to deliver in that security must be closed out, regardless of whether or not the fails to deliver resulted from sales of the security in connection with the options or equities markets.

Moreover, we are concerned that the options market maker exception might allow for a regulatory arbitrage not permitted in the equities markets.¹⁵⁵ For example, an options market maker who sells short to hedge put options purchased by a market participant unable to locate shares for a short sale in accordance with Rule 203(b)(2) of Regulation SHO may not have to close out any fails to deliver that result from such short sales under the options market maker exception. The ability of options market makers to sell short and never have to close out a resulting fail to deliver position, provided the short sale was effected to hedge options

positions created before the security became a threshold security, runs counter to the goal of requiring that all fails to deliver in threshold securities be closed out.

IX. Final Regulatory Flexibility Analysis

The Commission has prepared a Final Regulatory Flexibility Analysis (“FRFA”), in accordance with the provisions of the Regulatory Flexibility Act (“RFA”),¹⁵⁶ regarding the amendments to Regulation SHO, Rule 203, under the Exchange Act. An Initial Regulatory Flexibility Analysis (“IRFA”) was prepared in accordance with the RFA and was included in the Reproposal. We solicited comments on the IRFA.

A. Reasons for and Objectives of the Amendments

The amendments to Rule 203(b)(3) of Regulation SHO are intended to further reduce the number of persistent fails to deliver in threshold securities by eliminating the options market maker exception to Regulation SHO’s close-out requirement. As a result of the amendments, all fails to deliver in a threshold security resulting from short sales by a registered options market maker effected to establish or maintain a hedge on options positions established before the security became a threshold security will, like all other fails to deliver in threshold securities, have to be closed out in accordance with the close-out requirements of Regulation SHO.¹⁵⁷

We are concerned that persistent, large fail positions may have a negative effect on the market in these securities. For example, although high fails levels exist only for a small percentage of issuers, they may impede the orderly functioning of the market for such issuers, particularly issuers of less liquid securities. A significant level of fails to deliver in a security may have adverse consequences for shareholders who may be relying on delivery of those shares for voting and lending purposes, or may otherwise affect an investor’s decision to invest in that particular security. In addition, a seller that fails to deliver securities on trade settlement date effectively unilaterally converts a securities contract into an undated futures-type contract, to which the buyer might not have agreed, or that would have been priced differently.

¹⁵⁶ 5 U.S.C. 604.

¹⁵⁷ See 17 CFR 242.203(b)(3); see also Interim Final Temporary Rule, *supra* notes 42 and 43 (amending Regulation SHO to strengthen the delivery requirements for sales of all equity securities).

¹⁴⁹ See, e.g., *supra* note 19 (citing to comment letters expressing concern regarding the impact of potential “naked” short selling on capital formation).

¹⁵⁰ See letter from USANA; see also letter from Fairfax Financial (stating that the exception should be eliminated due to its “detrimental impact on issuers and their shareholders and also because such exception is susceptible to significant abuse”).

¹⁵¹ See letter from NCANS.

¹⁵² Academic research suggests that the ability for all option market makers to fail when hedging actually creates a competitive advantage for large option market makers over small option market makers. See, e.g., Evans, Richard B., Reed, Adam V., Geczy, Christopher Charles and Musto, David K. “Failure is an Option: Impediments to Short Selling and Options Prices,” *Rev. Financ. Stud.* (January

2008). The elimination of the options market maker exception, therefore, will remove this competitive advantage.

¹⁵³ See letter from USANA; see also letter from Fairfax Financial (stating that the exception should be eliminated due to its “detrimental impact on issuers and their shareholders and also because such exception is susceptible to significant abuse”).

¹⁵⁴ See 2007 Regulation SHO Final Amendments, 72 FR 45544; see also 2006 Regulation SHO Proposed Amendments, 71 FR 41710.

¹⁵⁵ See Reproposal, 72 FR at 45563.

Moreover, sellers that fail to deliver securities on settlement date may enjoy fewer restrictions than if they were required to deliver the securities in a timely manner, and such sellers may attempt to use this additional freedom to engage in trading activities that deliberately depress the price of a security.

B. Significant Issues Raised by Public Comment

The IRFA appeared in the Reproposal. We requested comment on any aspect of the IRFA. In particular, we requested comment on: (i) The number of small entities that would be affected by the amendment; and (ii) the existence or nature of the potential impact of the amendments on small entities. We requested that the comments specify costs of compliance with the amendment, and suggest alternatives that would accomplish the objectives of the amendment. We did not receive any comments that responded specifically to this request.

C. Small Entities Subject to the Amendment

The entities covered by the amendments will include small entities that are participants of a registered clearing agency, including small registered options market makers for which the participant clears trades or for which it is responsible for settlement. In addition, the entities covered by these amendments will include small entities that are market participants that effect sales subject to the requirements of Regulation SHO. Most small entities subject to the amendments will be registered broker-dealers. Paragraph (c)(1) of Rule 0–10¹⁵⁸ states that the term “small business” or “small organization,” when referring to a broker-dealer, means a broker or dealer that had total capital (net worth plus subordinated liabilities) of less than \$500,000 on the date in the prior fiscal year as of which its audited financial statements were prepared pursuant to § 240.17a–5(d); and is not affiliated with any person (other than a natural person) that is not a small business or small organization. As of 2007, the Commission estimates that there were approximately 896 registered broker-dealers that qualified as small entities as defined above.¹⁵⁹

As noted above, the entities covered by the amendments will include small

entities that are participants of a registered clearing agency. As of July 31, 2008, approximately 91% of participants of the NSCC, the primary registered clearing agency responsible for clearing U.S. transactions, were registered as broker-dealers. Participants not registered as broker-dealers include such entities as banks, U.S.-registered exchanges, and clearing agencies. Although these entities are participants of a registered clearing agency, generally these entities do not engage in the types of activities that would implicate the close-out requirements of Regulation SHO. Such activities of these entities include creating and redeeming Exchange Traded Funds, trading in municipal securities, and using NSCC’s Envelope Settlement Service or Inter-city Envelope Settlement Service. These activities rarely lead to fails to deliver and, if fails to deliver do occur, they are small in number and are usually cleaned up within a day. Thus, such fails to deliver would not trigger the close-out provisions of Regulation SHO.

The federal securities laws do not define what is a “small business” or “small organization” when referring to a bank. The Small Business Administration regulations define “small entities” to include banks and savings associations with total assets of \$165 million or less.¹⁶⁰ As of July 31, 2008, no bank that was a participant of the NSCC was a small entity because none met these criteria.

Paragraph (e) of Rule 0–10 under the Exchange Act¹⁶¹ states that the term “small business” or “small organization,” when referring to an exchange, means any exchange that: (1) Has been exempted from the reporting requirements of Rule 11Aa3–1 under the Exchange Act; and (2) is not affiliated with any person (other than a natural person) that is not a small business or small organization, as defined by Rule 0–10. No U.S. registered exchange is a small entity because none meets these criteria.

Paragraph (d) of Rule 0–10 under the Exchange Act¹⁶² states that the term “small business” or “small organization,” when referring to a clearing agency, means a clearing agency that: (1) Compared, cleared and settled less than \$500 million in securities transactions during the preceding fiscal year (or in the time that it has been in business, if shorter); (2) had less than \$200 million in funds and securities in its custody or control at all times during the preceding fiscal year

(or in the time that it has been in business, if shorter); and (3) is not affiliated with any person (other than a natural person) that is not a small business or small organization as defined by Rule 0–10. No clearing agency that is subject to the requirements of Regulation SHO is a small entity because none meets these criteria.

D. Reporting, Recordkeeping, and Other Compliance Requirements

The amendments to eliminate the options market maker exception to Regulation SHO’s close-out requirement will impose minimal new or additional reporting, recordkeeping, or compliance costs on broker-dealers that are small entities. In order to comply with Regulation SHO when it became effective in January, 2005, entities needed to modify their systems and surveillance mechanisms. Thus, the infrastructure necessary to comply with the amendments to eliminate the options market maker exception should already be in place. Any additional changes to the infrastructure should be minimal. In addition, entities that will be subject to the mandatory close-out requirement of Rule 203(b)(3) of Regulation SHO should already have systems in place to close out non-expected fails to deliver as required by Regulation SHO.

E. Agency Action To Minimize Effect on Small Entities

The RFA directs the Commission to consider significant alternatives that would accomplish the stated objectives, while minimizing any significant adverse impact on small entities. In connection with the amendments, the Commission considered the following types of alternatives: (a) Establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (b) clarification, consolidation, or simplification of compliance and reporting requirements under the amendments for small entities; (c) use of performance rather than design standards; and (d) an exemption from coverage of the amendment, or any part thereof, for small entities.

A primary goal of the amendments is to reduce the number of persistent fails to deliver in threshold securities. As such, we believe that imposing different compliance requirements, and possibly a different timetable for implementing compliance requirements, for small entities would undermine the goal of reducing fails to deliver. In addition, the rule amendment is already quite simple, so we do not believe it necessary to

¹⁵⁸ 17 CFR 240.0–10(c)(1).

¹⁵⁹ These numbers are based on OEA’s review of 2007 FOCUS Report filings reflecting registered broker-dealers. This number does not include broker-dealers that are delinquent on FOCUS Report filings.

¹⁶⁰ See 13 CFR 121.201.

¹⁶¹ 17 CFR 240.0–10(e).

¹⁶² 17 CFR 240.0–10(d).

further clarify, consolidate or simplify the amendments for small entities. The Commission also believes that using performance standards to specify different requirements for small entities or exempting small entities from having to comply with the amendment would not accomplish the regulatory goal of adopting a consistent approach to persistent fails to deliver.

X. Statutory Authority

Pursuant to the Exchange Act and, particularly, Sections 2, 3(b), 9(h), 10, 11A, 15, 17(a), 17A, and 23(a) thereof, 15 U.S.C. 78b, 78c(b), 78i(h), 78j, 78k-1, 78o, 78q(a), 78q-1, 78w(a), the Commission is adopting an amendment to § 242.203.

List of Subjects

17 CFR Part 242

Brokers, Fraud, Reporting and recordkeeping requirements, Securities.

Text of the Amendments to Regulation SHO

■ For the reasons set out in the preamble, Title 17, Chapter II, of the Code of Federal Regulations is amended as follows.

PART 241—INTERPRETATIVE RELEASES RELATING TO THE SECURITIES EXCHANGE ACT OF 1934 AND GENERAL RULES AND REGULATIONS THEREUNDER

■ 1. Part 241 is amended by adding Release No. 34-58775 and the release date of October 14, 2008 to the list of interpretative releases.

PART 242—REGULATIONS M, SHO, ATS, AC, AND NMS, AND CUSTOMER MARGIN REQUIREMENTS FOR SECURITY FUTURES

■ 2. The authority citation for part 242 continues to read as follows:

Authority: 15 U.S.C. 77g, 77q(a), 77s(a), 78b, 78c, 78g(c)(2), 78i(a), 78j, 78k-1(c), 78l, 78m, 78n, 78o(b), 78o(c), 78o(g), 78q(a), 78q(b), 78q(h), 78w(a), 78dd-1, 78mm, 80a-23, 80a-29, and 80a-37.

* * * * *

■ 3. Section 242.203 is amended by:
■ a. Revising paragraph (b)(3)(iii) and paragraph (b)(3)(v) to read as follows:

§ 242.203 Borrowing and delivery requirements.

* * * * *

(b) * * *
(3) * * *

(iii) *Provided, however*, that a participant of a registered clearing

agency that has a fail to deliver position at a registered clearing agency in a threshold security on the effective date of this amendment and which, prior to the effective date of this amendment, had been previously excepted from the close-out requirement in paragraph (b)(3) of this section (*i.e.*, because the participant of a registered clearing agency had a fail to deliver position in the threshold security that is attributed to short sales effected by a registered options market maker to establish or maintain a hedge on options positions that were created before the security became a threshold security), shall immediately close out that fail to deliver position, including any adjustments to the fail to deliver position, within 35 consecutive settlement days of the effective date of this amendment by purchasing securities of like kind and quantity;

* * * * *

(v) If a participant of a registered clearing agency entitled to rely on the 35 consecutive settlement day close-out requirement contained in paragraph (b)(3)(i), (b)(3)(ii), or (b)(3)(iii) of this section has a fail to deliver position at a registered clearing agency in the threshold security for 35 consecutive settlement days, the participant and any broker or dealer for which it clears transactions, including any market maker, that would otherwise be entitled to rely on the exception provided in paragraph (b)(2)(ii) of this section, may not accept a short sale order in the threshold security from another person, or effect a short sale in the threshold security for its own account, without borrowing the security or entering into a bona fide arrangement to borrow the security, until the participant closes out the fail to deliver position by purchasing securities of like kind and quantity;

By the Commission.

Dated: October 14, 2008.

Florence E. Harmon,

Acting Secretary.

[FR Doc. E8-24742 Filed 10-16-08; 8:45 am]

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 242

[Release No. 34-58773; File No. S7-30-08]

RIN 3235-AK22

Amendments to Regulation SHO

AGENCY: Securities and Exchange Commission.

ACTION: Interim final temporary rule; request for comments.

SUMMARY: The Securities and Exchange Commission (“Commission”) is adopting an interim final temporary rule under the Securities Exchange Act of 1934 (“Exchange Act”) to address abusive “naked” short selling in all equity securities by requiring that participants of a clearing agency registered with the Commission deliver securities by settlement date, or if the participants have not delivered shares by settlement date, immediately purchase or borrow securities to close out the fail to deliver position by no later than the beginning of regular trading hours on the settlement day following the day the participant incurred the fail to deliver position. Failure to comply with the close-out requirement of the temporary rule is a violation of the temporary rule. In addition, a participant that does not comply with this close-out requirement, and any broker-dealer from which it receives trades for clearance and settlement, will not be able to short sell the security either for itself or for the account of another, unless it has previously arranged to borrow or borrowed the security, until the fail to deliver position is closed out.

DATES: *Effective Date:* October 17, 2008 until July 31, 2009. *Comment Date:* Comments should be received on or before December 16, 2008.

ADDRESSES: Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s Internet comment form (<http://www.sec.gov/rules/final.shtml>); or
- Send an e-mail to rule-comments@sec.gov. Please include File Number S7-30-08 on the subject line; or
- Use the Federal eRulemaking Portal (<http://www.regulations.gov>). Follow the instructions for submitting comments.

Paper Comments

- Send paper comments in triplicate to Florence E. Harmon, Acting Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549-1090.
- All submissions should refer to File Number S7-30-08. This file number should be included on the subject line if e-mail is used. To help us process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s Internet Web site (<http://www.sec.gov/rules/final.shtml>).
