

launching of up to 40 missiles at SNI per year. Up to 10 launches per year may occur at night. Nighttime launches will only occur when required by the test objectives, e.g., when testing the Airborne Laser system (ABL). Harbor seals, California sea lions, and elephant seals are found on various haul-out sites and rookeries on SNI.

Potential impacts of the planned missile launch operations at SNI on marine mammals involve both acoustic and non-acoustic effects. Acoustic effects relate to sound produced by the engines of all launch vehicles, and, in some cases, their booster rockets. Potential non-acoustic effects could result from the physical presence of personnel during placement of video and acoustical monitoring equipment. However, careful deployment of monitoring equipment is not expected to result in any disturbance to pinnipeds hauled out nearby. Any visual disturbance caused by passage of a vehicle overhead is likely to be minor and brief as the launch vehicles are relatively small and move at great speed. The noise generated by Navy activities may result in the incidental harassment of pinnipeds, both behaviorally and in terms of physiological (auditory) impacts. The noise and visual disturbances from missile launches may cause the animals to move towards or enter the water.

Take of pinnipeds will be minimized through implementation of the following mitigation measures: (1) The Navy must avoid launch activities during harbor seal pupping season (February through April), unless constrained by factors including, but not limited to, human safety, national security, or for launch trajectory necessary to meet mission objectives; (2) the Navy must limit launch activities during other pinniped pupping seasons, unless constrained by factors including, but not limited to, human safety, national security, or for launch trajectory necessary to meet mission objectives; (3) the Navy must not launch missiles from the Alpha Complex at low elevation (less than 305 m [1,000 ft]) on launch azimuths that pass close to pinniped haul-out site(s) when occupied; (4) the Navy must avoid multiple vehicle launches in quick succession over haul-out sites when occupied, especially when young pups are present, except when required by mission objectives; and (5) the Navy must limit launch activities during nighttime hours, except when required by mission objectives (e.g., up to 10 nighttime launches for ABL testing per year). Additionally, for 2 hr prior to, during, and approximately 30 mins

following each launch, personnel are not allowed near any of the pinniped haul-out beaches that are close to the flight track on the western end of SNI. Associated fixed-wing and rotary aircraft will maintain an altitude of at least 305 m (1,000 ft) when traveling near beaches on which pinnipeds are hauled out, except in emergencies or for real-time security incidents (e.g., search-and-rescue, fire-fighting, adverse weather conditions), which may require approaching pinniped haul-outs and rookeries closer than 305 m (1,000 ft). Additionally, monitoring methods will be reviewed by NMFS if post-launch surveys determine that an injurious or lethal take of a marine mammal occurred. The Navy will also use monitoring surveys and time-lapse video to monitor the animals before, during, and after missile launches. Reports will be submitted to NMFS after each LOA expires, and a final comprehensive report, which will summarize all previous reports and assess cumulative impacts, will be submitted before the rule expires. This LOA will be renewed annually based on review of the annual monitoring report.
