AGENCY**

[EPA-HQ-OAR-2012-0375, FRL-9672-8]

**Protection of Stratospheric Ozone:
Request for Methyl Bromide Critical
Use Exemption Applications for 2015**

AGENCY: Environmental Protection
Agency (EPA).

ACTION: Notice of Solicitation of
Applications and Information on
Alternatives.

SUMMARY: EPA is soliciting applications for the critical use exemption from the phaseout of methyl bromide for 2015. Critical use exemptions last only one year. All entities interested in obtaining a critical use exemption for 2015 must provide EPA with technical and economic information to support a "critical use" claim and must do so by the deadline specified in this notice even if they have applied for an exemption in previous years. Today's notice also invites interested parties to

provide EPA with new data on the technical and economic feasibility of methyl bromide alternatives.

DATES: Applications for the 2015 critical use exemption must be postmarked on or before August 15, 2012.

ADDRESSES: EPA encourages users to submit their applications electronically to Jeremy Arling, Stratospheric Protection Division, at arling.jeremy@epa.gov. If the application is submitted electronically, applicants must fax a signed copy of Worksheet 1 to 202-343-9055 by the application deadline. Applications for the methyl bromide critical use exemption can also be submitted by U.S. mail to: U.S. Environmental Protection Agency, Office of Air and Radiation, Stratospheric Protection Division, Attention Methyl Bromide Team, Mail Code 6205J, 1200 Pennsylvania Ave. NW., Washington, DC 20460 or by courier delivery to: U.S. Environmental Protection Agency, Office of Air and Radiation,

Stratospheric Protection Division,
Attention Methyl Bromide Review
Team, 1310 L St. NW., Room 1047E,
Washington, DC 20005.

FOR FURTHER INFORMATION CONTACT:

General Information: U.S. EPA
Stratospheric Ozone Information
Hotline, 1-800-296-1996; also <http://www.epa.gov/ozone/mbr>.

Technical Information: Bill Chism, U.S.
Environmental Protection Agency,
Office of Pesticide Programs (7503P),
1200 Pennsylvania Ave. NW.,
Washington, DC 20460, 703-308-
8136. Email: chism.bill@epa.gov.

Regulatory Information: Jeremy Arling,
U.S. Environmental Protection
Agency, Stratospheric Protection
Division (6205J), 1200 Pennsylvania
Ave. NW., Washington, DC 20460,
202-343-9055. Email:
arling.jeremy@epa.gov.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. What do I need to know to respond to this request for applications?
 - A. Who can respond to this request for information?
 - B. How do I obtain an application form for the methyl bromide critical use exemption?
 - C. What must applicants address when applying for a critical use exemption?
 - D. What if I applied for a critical use exemption in a previous year?
 - E. What portions of the applications will be considered confidential business information?
- II. What is the legal authority for the critical use exemption?
 - A. What is the Clean Air Act (CAA) authority for the critical use exemption?
 - B. What is the Montreal Protocol authority for the critical use exemption?
 - C. What is the timing for applications for the 2015 control period?

I. What do I need to know to respond to this request for applications?

A. Who can respond to this request for information?

Entities interested in obtaining a critical use exemption must complete the application form available at <http://www.epa.gov/ozone/mbr/cueinfo.html>. The application may be submitted either by a consortium representing multiple users who have similar circumstances or by individual users. EPA encourages groups of users with similar circumstances to submit a single application (for example, any number of pre-plant users with similar soil, pest, and climactic conditions can join together to submit a single application). You should contact your local, state, regional or national commodity association to find out whether it plans to submit an

application on behalf of your commodity group.

In addition to requesting information from applicants for the critical use exemption, this solicitation for information provides an opportunity for any interested party to provide EPA with information on methyl bromide alternatives (e.g., technical and/or economic feasibility research).

B. How do I obtain an application form for the methyl bromide critical use exemption?

An application form for the methyl bromide critical use exemption can be obtained either in electronic or hard-copy form. EPA encourages use of the electronic form. Applications can be obtained in the following ways:

1. PDF, Microsoft Word, and Microsoft Excel formats at EPA's Web site: <http://www.epa.gov/ozone/mbr/cueinfo.html>;
2. PDF, Microsoft Word, and Microsoft Excel formats at Docket ID No. EPA-HQ-OAR-2012-0375. The docket can be accessed at <http://www.regulations.gov>. To obtain hard copies of docket materials, please email the EPA Docket Center: a-and-r-docket@epa.gov.

3. Hard copies can be ordered through the Stratospheric Ozone Protection Hotline at 1-800-296-1996.

C. What must applicants address when applying for a critical use exemption?

To support the assertion that a specific use of methyl bromide meets the requirements of the critical use exemption, applicants must demonstrate that there are no technically and economically feasible alternatives available for that use. EPA's Web site contains a list of available and potential alternatives. This list can be accessed at <http://www.epa.gov/ozone/mbr/alts.html>. Applicants must address the technical and economic feasibility of using these alternatives. Specifically, applications must include the following information for the U.S. to successfully defend its nominations for critical uses.

Commodities Such as Dried Fruit and Nuts

Applicants must address potential economic losses due to pest pressures, changes in quality, changes in timing, and any other economic implications for producers when converting to alternatives. Alternatives for which such information is needed include: Sulfuryl fluoride, propylene oxide (PPO), phosphine, and/or controlled atmosphere/temperature treatment system (CATTS). The applicant should

include the costs to retrofit equipment or design and construct new fumigation chambers for these alternatives. For the economic assessment applicants must provide the following: The amount of fumigant gas used (both methyl bromide and alternatives), price per pound of the fumigant gas from the most recent use season, application rates, differences in labor inputs (i.e., hours and wages) associated with alternatives, the amount of commodity treated with each fumigant/treatment and the value of the commodity being treated/produced. Also provide cost information on any other practices or equipment used (e.g. sanitation and IPM) that are not needed when methyl bromide is used for fumigation. Include information on the size of fumigation chambers where methyl bromide is used, the percent of commodity fumigated under tarps, the length of the harvest season, peak of the harvest season and duration, and volume of commodity treated daily at the harvest peak.

Where applicable, also provide the following: Examples of specific customer requests regarding pest infestation and examples of any phytosanitary requirements of foreign markets (e.g., import requirements of other countries) that may necessitate use of methyl bromide accompanied by explanation of why the methyl bromide quarantine and preshipment (QPS) exemption is not applicable for this purpose. The application must also contain a description of your future research plans which includes the pest(s), chemical(s), or management practice(s) you will be testing in the future to support this CUE. Also include information on what pest control practices organic producers are using for their commodity.

Structures and Facilities (Flour Mills, Rice Mills, Pet Food)

Applicants must address potential economic losses due to pest pressures, changes in quality, changes in timing, and any other economic implications for producers when converting to alternatives. Alternatives for which such information is needed include: Sulfuryl fluoride, micro-sanitation, and/or heat. The applicant should include the costs to retrofit equipment for these pest control methods. For the economic assessment applicants must provide the following: Price per pound of fumigant gas used (both methyl bromide and alternatives) from the most recent use season, application rates, differences in labor inputs (i.e., hours and wages) associated with alternatives, and value of the commodity being treated/produced. List how many mills have

been fumigated with methyl bromide over the last three years; the rate, volume, and target CT of methyl bromide at each location; volume of each facility; number of fumigations per year; and date facility was constructed.

Where applicable, also provide the following: Examples of specific customer requests regarding pest infestation and examples of any phytosanitary requirements of foreign markets (e.g., import requirements of other countries) that may necessitate use of methyl bromide accompanied by explanation of why the QPS exemption is not applicable for this purpose. The application must also contain a description of your future research plans which includes the pest(s), chemical(s), or management practice(s) you will be testing in the future to support this CUE. Also include information on what pest control practices organic producers are using for their facilities.

Dried Cured Pork

Applicants must list how many facilities have been fumigated with methyl bromide over the last three years; the rate, volume, and target CT of methyl bromide at each location; volume of each facility; number of fumigations per year; and the materials from which the facility was constructed. The application must also contain a description of your future research plans which includes the pest(s), chemical(s), or management practice(s) you will be testing in the future to support this CUE.

Cucurbits, Eggplant, Pepper, and Tomato

Applicants must address potential changes to yield, quality, and timing when converting to alternatives, including: The mixture of 1,3-dichloropropene plus chloropicrin, the Georgia three way mixture of 1,3-dichloropropene plus chloropicrin plus metam (sodium or potassium), dimethyl disulfide (DMDS), and any fumigationless system (if data are available). Applications must address regulatory and economic implications for growers and/or your region's production of these crops using these alternatives, including the costs to retrofit equipment and the differential impact of buffers for methyl bromide plus chloropicrin compared to the alternatives. For the economic assessment applicants must provide the following: Price per pound of fumigant gas used (both methyl bromide and alternatives) from the most recent use season; application rates; value of the crop being produced; differences in

labor inputs (i.e., hours and wages); and any differences in equipment costs or time needed to operate equipment associated with alternatives. The application must also contain a description of your future research plans which includes the pest(s), chemical(s), or management practice(s) you will be testing in the future to support this CUE.

Strawberry Fruit

Applicants must address potential changes to yield, quality, and timing when converting to alternatives, including: The mixture of 1,3-dichloropropene plus chloropicrin, the Georgia three way mixture of 1,3-dichloropropene plus chloropicrin plus metam (sodium or potassium), and any fumigationless system (if data are available). Applications must address regulatory and economic implications for growers and/or your region's production of these crops using these alternatives, including the costs to retrofit equipment and the differential impact of buffers for methyl bromide plus chloropicrin compared to the alternatives. For the economic assessment applicants must provide the following: Price per pound of fumigant gas used (both methyl bromide and alternatives) from the most recent use season; application rates; value of the crop being produced; differences in labor inputs (i.e., hours and wages); and any differences in equipment costs or time needed to operate equipment associated with alternatives. The application must also contain a description of your future research plans which includes the pest(s), chemical(s), or management practice(s) you will be testing in the future to support this CUE.

Nursery Stock, Orchard Replant, Ornamentals, and Strawberry Nursery

Applicants must address potential changes to yield, quality, and timing when converting to alternatives, including: The mixture of 1,3-dichloropropene plus chloropicrin, the Georgia three way mixture of 1,3-dichloropropene plus chloropicrin plus metam (sodium or potassium), dimethyl disulfide (DMDS), and steam. Applications must address regulatory and economic implications for growers and/or your region's production of these crops using these alternatives, including the costs to retrofit equipment and the differential impact of buffers for methyl bromide plus chloropicrin compared to the alternatives. For the economic assessment applicants must provide the following: Price per pound of fumigant gas used (both methyl bromide and

alternatives) from the most recent use season; application rates; value of the crop being produced; differences in labor inputs (i.e., hours and wages); and any differences in equipment costs or time needed to operate equipment associated with alternatives. The application must also contain a description of your future research plans which includes the pest(s), chemical(s), or management practice(s) you will be testing in the future to support this CUE.

D. What if I applied for a critical use exemption in a previous year?

Critical use exemptions are valid for only one year and do not automatically renew. All users desiring to obtain an exemption for 2015 must apply to EPA even if they have applied for critical uses in previous years. Because of the latest changes in registrations, costs, and economic aspects for producing critical use crops and commodities, applicants must fill out the application form completely.

E. What portions of the applications will be considered confidential business information?

You may assert a business confidentiality claim covering part or all of the information by placing on (or attaching to) the information, at the time it is submitted to EPA, a cover sheet, stamped or typed legend, or other suitable form of notice employing language such as "trade secret," "proprietary," or "company confidential." You should clearly identify the allegedly confidential portions of otherwise non-confidential documents, and you may submit them separately to facilitate identification and handling by EPA. If you desire confidential treatment only until a certain date or until the occurrence of a certain event, your notice should state that. Information covered by a claim of confidentiality will be disclosed by EPA only to the extent, and by means of the procedures, set forth under 40 CFR part 2 subpart B; 41 FR 36752, 43 FR 40000, 50 FR 51661. If no claim of confidentiality accompanies the information when EPA receives it, EPA may make it available to the public without further notice.

If you are asserting a business confidentiality claim covering part or all of the information in the application, please submit a non-confidential version that EPA can place in the public docket for reference by other interested parties. Do not include on the "Worksheet 6: Application Summary" page of the application any information that you wish to claim as confidential

business information. Any information on Worksheet 6 shall not be considered confidential and will not be treated as such by the Agency. EPA will place a copy of Worksheet 6 in the public domain. Please note, claiming business confidentiality may delay EPA's ability to review your application.

II. What is the legal authority for the critical use exemption?

A. What is the Clean Air Act (CAA) authority for the critical use exemption?

In October 1998, Congress amended the Clean Air Act to require EPA to conform the U.S. phaseout schedule for methyl bromide to the provisions of the *Montreal Protocol on Substances that Deplete the Ozone Layer* for industrialized countries and to allow EPA to provide a critical use exemption. These amendments were codified in Section 604 of the Clean Air Act, 42 U.S.C. 7671c. Under EPA implementing regulations, the production and consumption of methyl bromide was phased out as of January 1, 2005. Section 604(d)(6), as added in 1998, allows EPA to exempt the production and import of methyl bromide from the phaseout for critical uses, to the extent consistent with the Montreal Protocol.

EPA regulations at 40 CFR 82.4 prohibit the production and import of methyl bromide in excess of the amount of unexpended critical use allowances held by the producer or importer, unless authorized under a separate exemption. Methyl bromide produced or imported by expending critical use allowances may be used only for the appropriate category of approved critical uses as listed in Appendix L to the regulations (40 CFR 82.4(p)(2)). The use of methyl bromide that was produced or imported through the expenditure of production or consumption allowances prior to 2005 is not confined to critical uses under EPA's phaseout regulations; however, other restrictions may apply.

B. What is the Montreal Protocol authority for the critical use exemption?

The Montreal Protocol provides that the Parties may exempt "the level of production or consumption that is necessary to satisfy uses agreed by them to be critical uses" (Art. 2H para 5). The Parties to the Protocol included this language in the treaty's methyl bromide phaseout provisions in recognition that alternatives might not be available by 2005 for certain uses of methyl bromide agreed by the Parties to be "critical uses."

In their Ninth Meeting (1997), the Parties to the Protocol agreed to Decision IX/6, setting forth the

following criteria for a "critical use" determination and an exemption from the production and consumption phaseout:

- (a) That a use of methyl bromide should qualify as "critical" only if the nominating Party determines that:
 - (i) The specific use is critical because the lack of availability of methyl bromide for that use would result in a significant market disruption; and
 - (ii) There are no technically and economically feasible alternatives or substitutes available to the user that are acceptable from the standpoint of environment and health and are suitable to the crops and circumstances of the nomination.
- (b) That production and consumption, if any, of methyl bromide for a critical use should be permitted only if:
 - (i) All technically and economically feasible steps have been taken to minimize the critical use and any associated emission of methyl bromide;
 - (ii) Methyl bromide is not available in sufficient quantity and quality from existing stocks of banked or recycled methyl bromide, also bearing in mind the developing countries' need for methyl bromide;

(iii) It is demonstrated that an appropriate effort is being made to evaluate, commercialize and secure national regulatory approval of alternatives and substitutes, taking into consideration the circumstances of the particular nomination. * * * Non-Article 5 Parties [e.g., developed countries, including the U.S.] must demonstrate that research programs are in place to develop and deploy alternatives and substitutes. * * *

EPA has defined "critical use" in its regulations at 40 CFR 82.3 in a manner similar to Decision IX/6 paragraph (a).

C. What is the timing for applications for the 2015 control period?

There is both a domestic and international component to the critical use exemption process. The projected timeline for the process for the 2015 critical use exemption is as follows:

May 17, 2012: Solicit applications for the methyl bromide critical use exemption for 2015.

August 15, 2012: Deadline for submitting critical use exemption applications to EPA.

Fall 2012: U.S. Government (EPA, Department of State, U.S. Department of Agriculture, and other interested Federal agencies) prepares U.S. Critical Use Nomination package.

January 24, 2013: Deadline for U.S. Government to submit U.S. nomination package to the Protocol Parties.

Early 2013: Technical and Economic Assessment Panel (TEAP) and Methyl Bromide Technical Options Committee (MBTOC) review the nominations for critical use exemptions.

Mid 2013: Parties consider TEAP/MBTOC recommendations.

November 2013: Parties decide whether to authorize critical use exemptions for methyl bromide for production and consumption in 2015.

Mid 2014: EPA publishes proposed rule for allocating critical use exemptions in the U.S. for 2015.

Late 2014: EPA publishes final rule allocating critical use exemptions in the U.S. for 2015.

January 1, 2015: Critical use exemption permits the limited production and import of methyl bromide for specified uses for the 2015 control period.

Authority: 42 U.S.C. 7414, 7601, 7671–7671q.

Dated: May 8, 2012.

Sarah Dunham,

Director, Office of Atmospheric Programs.

BILLING CODE 6560–50–P

EXPORT-IMPORT BANK OF THE UNITED STATES

Economic Impact Policy

This notice is to inform the public that the Export-Import Bank of the United States has received an application for a \$4.3 billion direct loan to support the export of approximately \$3.3 billion in U.S. equipment and services to establish a new petrochemical facility in Saudi Arabia.

The U.S. exports will enable the facility to produce approximately: 750,000 metric tons of linear low density polyethylene (LLDPE); 350,000 metric tons of linear density polyethylene (LDPE); 250,000 metric tons of elastomers; 200,000 metric tons of glycol ethers; 70,000 metric tons of propylene glycol (MPG); 208,000 metric tons of ethanalamines and ethyleneamines; 400,000 metric tons of polyether polyols; 200,000 metric tons of toluene diisocyanate (TDI); and 400,000 metric tons of polymeric methyl diphenyl diisocyanate (PMDI). Initial production at this facility is expected to be phased in from 2016 to 2018.

Available information indicates the Saudi petrochemical producer plans to sell its products as follows: The majority of LDPE, LLDPE and glycol ethers will be sold primarily in the Asia-Pacific market, and the balance will be sold in the Europe, Middle East and Africa
