Proposed Collection: Women's Health Initiative Observational Study. Revision- OMB No. 0925-0414, Expiration Date: 07/31/2013. National Heart, Lung, and Blood Institute (NHLBI), National Institutes of Health (NIH).

Need and Use of Information Collection: This study will be used by the NIH to evaluate risk factors for chronic disease among older women by developing and following a large cohort of postmenopausal women and relating subsequent disease development to baseline assessments of historical, physical, psychosocial, and physiologic characteristics. In addition, the observational study will complement the clinical trial (which has received

clinical exemption) and provide additional information on the common causes of frailty, disability and death for postmenopausal women, namely, coronary heart disease, breast and colorectal cancer, and osteoporotic fractures. Continuation of follow-up years for ascertainment of medical history update forms will provide essential data for outcomes assessment for this population of aging women.

OMB approval is requested for 3 years. There are no costs to respondents other than their time, which is estimated at \$308,218 for all respondents. The total estimated annualized burden hours are 13,927.

Type of respondent*	Number of respondents	Number of responses per response	Average burden per response (in hours)	Total annual burden hours
OS Participants	41,495	1	20/60	13,832
Next of kin	936	1	6/60	94
Physician/Office Staff	17	1	5/60	1

* Annual burden is placed on health care providers and respondent relatives/informants through requests for information which will help in the compilation of the number and nature of new fatal and nonfatal events.
