Need and Use of Information Collection: The Social Security Administration (SSA) entered into an interagency agreement (IAA) with the

National Institutes of Health (NIH), Clinical Center (CC), Rehabilitation Medicine Department (RMD), to explore innovative methods of functional assessment to improve SSA's disability determination process. As part of its study, NIH recommended item response theory (IRT) coupled with computer adaptive testing (CAT) as a promising approach to efficiently and consistently capture claimant functional information to assist SSA adjudicators. IRT is a framework for the design, analysis, and scoring of tests, questionnaires, and similar instruments measuring abilities, aptitudes, and other variables. It is often the preferred method for the development of tests such as the Graduate Record Examination (GRE) and the Graduate Management Admission Test (GMAT).

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 11,361.
