SUPPLEMENTARY INFORMATION:

I. Background

The ASME/ANS Joint Committee on Nuclear Risk Management (JCNRM) plans to publish three Probabilistic Risk Assessment (PRA) standards for trial use at the end of this calendar year or the beginning of 2015: (1) Low Power Shutdown PRA Standard, (2) Level 2 PRA Standard and (3) Advanced Light Water Reactor (ALWR) PRA standard. At a public meeting, the NRC seeks to discuss with interested stakeholders options for the NRC to endorse use of these standards.

The NRC has been discussing multi-unit risk for many years with limited discussion on multi-module risk. The NRC staff plans to discuss their expectations for Multi-Module risk in a public meeting and in a white paper entitled "Multi-Module Risk–NRC Expectations" (ADAMS Accession No. ML14150A330). The paper will be issued and available to the public by June 20, 2014.

II. Public Meeting

The public meeting will be held in Rockville, Maryland, at 21 Church Street in Room CSB 06B1 on June 26, 2014, at 8:00 a.m.

There will be two items on the agenda for the meeting. The first agenda item will be to discuss staff options for endorsement of the ASME/ANS standards to be issued for trial use and to solicit stakeholder input. The second agenda item will be discussion of the NRC white paper entitled "Multi—Module Risk–NRC Expectations" (ADAMS ML ML14150A330) which will be available to the public by June 20, 2014.

The purpose of these agenda items is for the NRC staff to answer questions, to provide clarification regarding the white paper, and to solicit early stakeholder comments on both of these subjects. This meeting will be a Category 2 public meeting.

Dated at Rockville, Maryland, this 11th day of June 2014.

For the Nuclear Regulatory Commission.

II. Background

The NRC is responsible for regulating the civilian use of nuclear materials and facilities in a manner that protects public health and safety from radiological hazards and common defense and security. The NRC has statutory authority to regulate and license uranium recovery facilities through the Atomic Energy Act of 1954, as amended (AEA) and the Uranium Mill Tailings Radiation Control Act of 1978. In part, these statutes require that the NRC to ensure the management of source material, as defined in AEA Section 11z., and byproduct material, as defined in AEA Section 11e.(2), conforms to applicable regulatory requirements.

License applicants initiate the proposed federal action by submitting an application to the NRC for projects or activities requiring an NRC license or approval. The NRC must then make a decision whether to grant or deny the applicant's request. In addition to the NRC staff's safety review, the NRC staff conducts an environmental review, as required under the National Environmental Policy Act of 1969, as amended (NEPA). Through the environmental review, the NRC evaluates the potential environmental impacts from the applicant's proposal. The NRC's NEPA implementing regulations are in Part 51 of Title 10 of the *Code of Federal Regulations* (10 CFR), "Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions."

Congress enacted the NHPA to support and encourage the preservation of prehistoric and historic resources. Section 106 of the NHPA requires federal agencies to take into account the effects of their undertakings on historic properties and allow the Advisory Council on Historic Preservation an opportunity to review and comment on the undertaking. The NHPA implementing regulations are in 36 CFR part 800, "Protection of Historic Properties." Federal agencies carry out the Section 106 process through consultation as appropriate with the State Historic Preservation Officer, Tribal Historic Preservation Officer, other federal, state, and local governmental agencies, Tribal governments, other interested parties, and the public. The NRC conducts the Section 106 process as part of its reviews of requests for license applications. In accordance with 36 CFR 800.1(c), the NRC must complete the

Section 106 process prior to making licensing decision on the request for the licensing action.

The NRC's guidance for conducting environmental reviews in support of the Office of Federal and State Materials and Environmental Management Programs and Office of Nuclear Material Safety and Safeguards licensing and regulatory actions is provided in NUREG-1748, "Environmental Review Guidance for Licensing Actions Associated With Nuclear Material Safety and Safeguards Programs" (ADAMS Accession No. ML032450279). NUREG-1748 also includes general guidance for complying with the NHPA Section 106 process.

Over the past several years, an increase in the number of licensing action for *in situ* uranium recovery (ISR) facilities has resulted in an increase in the NRC's Section 106 activities. In addition, the complexity of the Section 106 reviews associated with the ISR licensing actions has grown significantly. As a result, the NRC has decided to supplement the Section 106 guidance contained in NUREG-1748 by providing specific guidance for the NRC's implementation of the Section 106 process in uranium recovery licensing actions. The purpose of this draft ISG is to assist NRC staff in conducting the Section 106 process specific to uranium recovery licensing actions. While this guidance is primarily intended for the NRC staff, it is also provides useful information for participants in the Section 106 process for uranium recovery licensing actions. This ISG, however, only provides guidance and does not impose regulatory requirements.

The NRC staff plans to revise the applicable sections of NUREG-1748 to include the guidance in this ISG. Until then, the NRC staff will use this ISG and revise and update the document as needed to clarify the content or incorporate subsequent modifications.

The NRC staff will review and consider the comments received in response to this request and revise the ISG as appropriate.

Dated at Rockville, Maryland, this 12th day of June 2014.

For the U.S. Nuclear Regulatory Commission.

Aby Mohseni,

Deputy Director, Environmental Protection and Performance Assessment Directorate, Division of Waste Management and Environmental Protection, Office of Federal and State Materials and Environmental Management Programs.
