

222.59(a)(1) to allow the use of a wayside horn at a pedestrian crossing and Appendix E to 49 CFR part 222, Paragraphs 4 and 6, to allow a minimum sound level of 80 dB(A) when measured 20 feet from the crossing gate and that a wayside horn does not need to be directed toward approaching traffic.

- Option 3—Establish a New Quiet Zone Without a Public Highway-Rail Crossing. The City requests a waiver from the definition of a new quiet zone as found in 49 CFR 222.9 so that a new quiet zone could be established without a public highway-rail grade crossing. Option 3 also requests that waivers be granted from the following regulations: 49 CFR 222.25(b)(1) and (2) so that an additional diagnostic team evaluation is not necessary at the private highway-rail crossing, 49 CFR 222.27(b) and (c) so that additional diagnostic team evaluations are not necessary at the six pedestrian crossings, 49 CFR 222.43(a)(1) so that a Notice of Intent is not necessary, and 49 CFR 222.39(b)(3) to allow a 20-day comment period instead of a 60-day comment period on a public authority application for FRA approval.

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA-2014-0085]

Petition for Waiver of Compliance

In accordance with Part 211 of Title 49 Code of Federal Regulations (CFR), this document provides the public notice that by a document dated, June 10, 2014, the Association of American Railroads, on behalf of CSX Transportation, Inc., the National Railroad Passenger Corporation, Norfolk Southern Railway Company, and Union Pacific Railroad Company, (collectively, "petitioners") petitioned the Federal Railroad Administration (FRA) for a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR 236.586, *Daily or after trip test*, and § 236.588, *Periodic test*. Section 236.586(a) provides that, except where tests prescribed by § 236.588 are performed at intervals of not more than 2 months, each locomotive equipped with an automatic cab signal or train stop or train control device operating in equipped territory shall be inspected for damage to the equipment and tested at least once each calendar day or within 24 hours before departure upon each trip. Section 236.588 provides that, except as provided in § 236.586, periodic test of the automatic train stop, train control, or cab signal apparatus shall be made at least once every 92

days, and on multiple-unit cars as specified by the carrier, subject to approval by FRA. The petitioners request to be permitted to increase the time between inspections to 184 days for a 5-year period. FRA assigned the petition Docket Number FRA-2014-0085.

The petitioners note that today's automatic train stop, train control, and cab signal apparatus use microprocessor-based technology. This technology provides enhanced safety because the microprocessor-based system has diagnostics that monitor the functioning of cab signal equipment and records faults, particularly with respect to features relevant to the periodic inspection. Major faults are instantly addressed; minor faults are addressed through later data analysis. In some cases, railroads have the capability of analyzing the data remotely, without the need for the locomotive to be shopped; and if the system detects a failure, the system goes into fail-safe mode and triggers a penalty air brake application.

Performing signal inspections pursuant to 49 CFR 236.588 in conjunction with and under the same schedule as the locomotive inspections under 49 CFR 229.23(b) would increase efficiency without compromising safety.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at www.regulations.gov and in person at the U.S. Department of Transportation's Docket Operations Facility, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590.
